Authors' Preface . . . . .	9
<b>Chapter 1 A Review of Basic Statistical Techniques</b>	<b>11</b>
1.1 Descriptive statistics. . . . .	12
1.2 Probability distributions . . . . .	16
1.2.1 Discrete random variables . . . . .	16
1.2.2 Continuous random variables . . . . .	18
1.3 Basic statistical inference . . . . .	22
1.3.1 Inferences concerning the population mean (large samples) . . . . .	22
1.3.2 Hypothesis tests on the mean (large samples) . . . . .	25
1.3.3 Inferences concerning the population mean (small samples) . . . . .	29
1.3.4 Inferences concerning the difference of two population means from two matched samples . . . . .	30
1.3.5 Inferences concerning the difference of two population means (small samples) . . . . .	32
1.3.6 Comparison of two population variances . . . . .	33
References and further reading. . . . .	34
<b>Chapter 2 Regression Analysis</b>	
2.1 Introduction. . . . .	35
2.1.1 General model with additive error. . . . .	36
2.1.2 General model with multiplicative error. . . . .	36
2.1.3 The method of least squares . . . . .	37
2.1.4 Analysis of regression. . . . .	39
2.2 Transformations to linear form . . . . .	42
2.3 Multiple regression. . . . .	46
2.3.1 Planar regression . . . . .	46
2.3.2 Analysis of regression and interpretation of results. . . . .	49
2.4 Curvilinear regression . . . . .	51
2.4.1 Quadratic regression. . . . .	51
2.4.2 Analysis of regression. . . . .	54
2.4.3 Cubic and higher order polynomial regression . . . . .	57
2.5 Examination of residuals. . . . .	57
2.6 Use of computers . . . . .	64
References and further reading. . . . .	70
Exercises . . . . .	71

**Chapter 3 Design and Analysis of Experiments**

3.1	Introduction . . . . .	75
3.2	One-way classification . . . . .	77
	3.2.1 Parametric model . . . . .	78
	3.2.2 Random model . . . . .	78
	3.2.3 Analysis of variance for one-way classification . . . . .	79
	3.2.4 Comparisons between individual levels for the parametric model . . . . .	82
3.3	Two-way classification without replication . . . . .	85
	3.3.1 Parametric model . . . . .	86
	3.3.2 Random model . . . . .	87
	3.3.3 Mixed model . . . . .	88
	3.3.4 Analysis of variance for two-way classification without replication . . . . .	88
3.4	Two-way classification with replication . . . . .	92
	3.4.1 Models . . . . .	92
	3.4.2 Analysis of variance for two-way classification with replication . . . . .	92
3.5	Latin Square design . . . . .	97
	3.5.1 Models . . . . .	97
	3.5.2 Analysis of variance for a Latin Square design . . . . .	98
3.6	Analysis of covariance . . . . .	100
3.7	Factorial designs with factors at two levels . . . . .	101
	3.7.1 $2^2$ designs . . . . .	101
	3.7.2 Yates' technique for analysing a $2^2$ experiment . . . . .	102
	3.7.3 $2^2$ designs with replication . . . . .	104
	3.7.4 $2^k$ designs with replication . . . . .	106
	3.7.5 Confounding and fractional replication in $2^k$ experiments . . . . .	109
3.8	Use of computers . . . . .	109
	References and further reading . . . . .	110
	Exercises . . . . .	110

**Chapter 4 Nonparametric Methods**

4.1	Introduction . . . . .	117
4.2	One sample location test . . . . .	121
	4.2.1 The binomial test . . . . .	121
4.3	Two matched samples location tests . . . . .	125
	4.3.1 The sign test . . . . .	126
	4.3.2 Wilcoxon's signed rank test . . . . .	129
4.4	Two independent samples location test . . . . .	132
	4.4.1 The Mann-Whitney $U$ -test . . . . .	133
4.5	$k$ independent samples location test . . . . .	136
	4.5.1 The Kruskal-Wallis test . . . . .	137
4.6	Two independent samples dispersion test . . . . .	139
	4.6.1 The Moses test . . . . .	139

4.7 Rank correlation methods. . . . . 142  
 4.7.1 Spearman's rho . . . . . 143  
 4.7.2 Kendall's tau . . . . . 146  
 4.7.3 Kendall's coefficient of concordance. . . . . 149  
 References and further reading. . . . . 151  
 Exercises . . . . . 151

**Chapter 5 Sampling Inspection and Quality Control**

5.1 Introduction. . . . . 155  
 5.2 Batch inspection . . . . . 156  
 5.2.1 Single sampling plans . . . . . 156  
 5.2.2 Methods of choosing a single sampling plan . . . . . 160  
 5.2.3 Double sampling plans . . . . . 167  
 5.2.4 Sequential sampling plans . . . . . 169  
 5.2.5 Batch inspection by variables. . . . . 170  
 5.3 Continuous production inspection . . . . . 173  
 5.3.1 Shewhart charts . . . . . 174  
 5.3.2 Decision rule for Shewhart  $\bar{x}$ -charts. . . . . 175  
 5.3.3 Decision rule for Shewhart  $R$ -charts . . . . . 177  
 5.3.4 CUSUM charts . . . . . 178  
 5.3.5 Decision rule for CUSUM  $\bar{x}$ -charts . . . . . 181  
 5.3.6 Decision rule for CUSUM  $R$ -charts . . . . . 183  
 5.3.7 A comparison of Shewhart and CUSUM procedures . . . . . 185  
 5.3.8 Continuous production inspection by attributes . . . . . 187  
 References and further reading. . . . . 187  
 Exercises . . . . . 188

**Chapter 6 Sample Surveys**

6.1 Introduction. . . . . 193  
 6.2 Simple random sampling. . . . . 195  
 6.2.1 Selection of a simple random sample. . . . . 195  
 6.2.2 Simple random sampling—estimation of a population mean. . . 197  
 6.2.3 Simple random sampling—estimation of a population total . . 205  
 6.2.4 Simple random sampling—estimation of a population  
 proportion . . . . . 206  
 6.2.5 Multiple attributes. . . . . 210  
 6.3 Stratified populations. . . . . 211  
 6.3.1 The stratified sample mean . . . . . 212  
 6.3.2 Proportional allocation. . . . . 213  
 6.3.3 Optimum allocation. . . . . 215  
 6.3.4 Stratified sampling taking into account sampling costs . . . . 217  
 6.3.5 Estimating proportions in a stratified population. . . . . 218  
 6.4 Presentation and analysis of sample survey results . . . . . 219  
 6.4.1 Marginal distributions. . . . . 220  
 6.4.2 Contingency tables and the chi-square test for association . . . 222  
 6.4.3 Correlation. . . . . 226

6.4.4 The use of multivariate techniques in the analysis of survey data . . . . .	228
References and further reading. . . . .	229
Exercises . . . . .	229
<b>Chapter 7 Forecasting</b>	
7.1 Introduction. . . . .	235
7.2 Decomposition of a time series. . . . .	237
7.2.1 Principles of decomposition. . . . .	237
7.2.2 Linear trend models without seasonal variation . . . . .	238
7.2.3 Linear trend models with seasonal variation . . . . .	243
7.3 Long term forecasting . . . . .	248
7.3.1 Introduction. . . . .	248
7.3.2 Types of trend curve . . . . .	249
7.3.3 The fitting of trend curves. . . . .	253
7.4 Adaptive forecasting . . . . .	260
7.4.1 Introduction. . . . .	260
7.4.2 Exponentially weighted moving averages . . . . .	261
7.4.3 Adaptive forecasting for trend processes . . . . .	264
7.4.4 Adaptive forecasting for seasonal processes. . . . .	266
7.4.5 Monitoring of short term forecasts . . . . .	268
7.5 Further short term forecasting techniques . . . . .	269
7.5.1 Discounted regression. . . . .	269
7.5.2 Box-Jenkins method . . . . .	270
7.5.3 Bayesian forecasting. . . . .	271
References and further reading. . . . .	271
Exercises . . . . .	272
<b>Appendix Statistical Tables . . . . .</b>	<b>276</b>
<b>Answers to Exercises . . . . .</b>	<b>295</b>
<b>Answers to Problems . . . . .</b>	<b>303</b>
<b>Index . . . . .</b>	<b>307</b>
