

Dipl.-Ing. Chun Wang, Neubiberg

Thermosyphon Processes for Engineering Application

Numerical Modeling and its Experimental Verification

Reihe **3**: Verfahrenstechnik

Nr. **495**

TABLE OF CONTENTS

NOMENCLATURE.....	VIII
1 INTRODUCTION.....	1
1.1 Summary of Prior Work.....	3
1.1.1 Summary of Experimental Investigations.....	3
1.1.2 Summary of Theoretical Researches.....	3
1.2 Two-Fluid Model for Two-Phase Flow.....	6
1.2.1 Researches and Applications of Two-Fluid Model for Two-Phase Flow.....	7
1.2.2 Applications of Two-Fluid Model for Two-Phase Flow in Heat Pipes.....	8
1.3 Objectives of the Present Work.....	9
2 MODEL EQUATIONS AND NUMERICAL METHOD	10
2.1 Appel's and Fromm's GHP Model.....	10
2.2 Model Equations	11
2.2.1 Vapor Mass Equation.....	12
2.2.2 Liquid Mass Equation	12
2.2.3 Vapor Motion Equation	12
2.2.4 Liquid Motion Equation.....	13
2.2.5 Vapor Energy Equation.....	13
2.2.6 Liquid Energy Equation	13
2.2.7 Interfacial Heat-Transfer Rate	14
2.2.8 Wall Heat-Transfer Rate	14
2.2.9 Wall Temperature Equation.....	15
2.3 Numerical Method.....	15
2.3.1 Control Volume Arrangement and Variable Storage.....	16
2.3.2 Discretization of the Mass Conservation Equation.....	17
2.3.3 Discretization of the Momentum Equation	20
2.3.4 Discretization of the Energy Equation	24
2.3.5 Discretization of the Wall Temperature Equation	28

2.4	Stability-Enhancing Two-Step Method	33
2.4.1	Model of SETS	33
2.4.2	Discretization Equations of SETS	38
2.5	Constitutive Equations.....	48
2.5.1	Heat-Transfer Coefficients Between Wall and Liquid.....	49
2.5.2	Heat-Transfer Coefficients Between Wall and Vapor.....	52
2.5.3	Interfacial Heat-Transfer Coefficients.....	52
2.5.4	Wall Shear Stress.....	53
2.5.5	Interfacial Shear Stress.....	53
2.5.6	Interfacial Mass-Transfer.....	54
2.5.7	Interphase Surface Area per Unit Volume	55
2.5.8	Film Thickness	55
2.5.9	Heat-Transfer Wall Area of the GHP.....	56
2.6	Initial Conditions	56
2.6.1	Initial Velocity of Vapor.....	57
2.6.2	Initial Velocity of Liquid	57
2.6.3	Initial Temperature of Vapor.....	57
2.6.4	Initial Temperature of Wall	57
2.6.5	Initial Temperature of Liquid.....	58
2.6.6	Initial Volume Fraction of Vapor and Liquid	58
2.7	Boundary Conditions	58
2.8	Numerical Procedure	59
2.9	Solution Algorithm	62
2.10	Convergence Criterion.....	62
3	EXPERIMENTAL INVESTIGATION	64
3.1	A Base Supporting a GHP Device.....	64
3.2	Construction of Heating and Cooling Zones.....	67
3.3	Experimental Device.....	68
3.3.1	Arrangement of Thermocouples	68
3.3.2	Employed GHP	69
3.3.3	Survey about the Investigation Parameters Selected	70

4	RESULTS AND DISCUSSIONS	72
4.1	Temperature Distribution of the Working Fluid.....	72
4.2	Distribution of the Wall Temperature.....	73
4.3	Temperature Distribution of Liquid along the GHP	74
4.4	Relation between the Temperature of the Evaporator Wall and the Vapor Core	74
4.5	Axial Velocity Distribution of Vapor along the GHP.....	75
4.6	Axial Velocity Distribution of Liquid along the GHP.....	77
4.7	Comparison of Axial Velocity of Liquid and Vapor along the GHP	78
4.8	Relation between Heat Flow Rate and Temperatures of Evaporator and Condenser	79
5	CONCLUSIONS.....	82
6	APPENDIX.....	84
7	REFERENCES.....	105
