Introduction	1
0.1. Locally analytic vectors and locally analytic representations	2
0.2. The organization of the memoir	4
0.3. Terminology, notation, and conventions	6
Chapter 1. Non-archimedean functional analysis	11
1.1. Functional analytic preliminaries	11
1.2. Fréchet-Stein algebras	22
Chapter 2. Non-archimedean function theory	31
2.1. Continuous rigid analytic, and locally analytic functions	31
2.2. Distributions	43
2.3. Change of field	46
Chapter 3. Continuous, analytic, and locally analytic vectors	49
3.1. Regular representations	49
3.2. The orbit map and continuous vectors	51
3.3. Analytic vectors	54
3.4. Analytic vectors continued	63
3.5. Locally analytic vectors	66
3.6. Analytic and locally analytic representations	73
Chapter 4. Smooth, locally finite, and locally algebraic vectors	81
4.1. Smooth and locally finite vectors and representations	81
4.2. Locally algebraic vectors and representations	86
Chapter 5. Rings of distributions	93
5.1. Frobenius reciprocity and group rings of distributions	93
5.2. Completions of universal enveloping algebras	99
5.3. Rings of locally analytic distributions are Fréchet-Stein algebras	107
Chapter 6. Admissible locally analytic representations	119
6.1. Admissible locally analytic representations	119
6.2. Strongly admissible locally analytic representations and admissible continuous representations	125
6.3. Admissible smooth and admissible locally algebraic representations	129
6.4. Essentially admissible locally analytic representations	133
6.5. Invariant lattices	139
Chapter 7. Representations of certain product groups	145
7.1. Strictly smooth representations	145

7.2. Extensions of notions of admissibility for representations of certain product groups	150
Bibliography	157
