PART I GENERAL THEORY

1	Introduction	3
1.1	Definition	3
1.2	Basic examples	4
1.2.1	\mathbb{C}^n as an RKHS	4
1.2.2	A non-example	5
1.3	Examples from analysis	6
1.3.1	Sobolev spaces on $[0,1]$	6
1.3.2	The Paley-Wiener spaces: an example from signal processing	9
1.4	Function theoretic examples	11
1.4.1	The Hardy space of the unit disk $H^2(\mathbb{D})$	11
1.4.2	Bergman spaces on complex domains	13
1.4.3	Two multivariable examples	15
1.5	Exercises	15
2	Fundamental results	17
2.1	Hilbert space structure	17
2.2	Characterization of reproducing kernels	23
2.3	The Reconstruction Problem	27
2.3.1	The RKHS induced by a function	30
2.3.2	The RKHS of the Min function	30
2.3.3	The RKHS induced by a positive matrix	32
2.3.4	The RKHS induced by the inner product	33
2.4	Exercises	35

3	Interpolation and approximation	37
3.1	Interpolation in an RKHS	37
3.2	Strictly positive kernels	40
3.3	Best least squares approximants	41
3.4	The elements of $\mathcal{H}(K)$	42
3.5	Exercises	45
4	Cholesky and Schur	47
4.1	Cholesky factorization	47
4.1.1	Cholesky's algorithm	50
4.2	Schur products and the Schur decomposition	52
4.3	Tensor products of Hilbert spaces	54
4.4	Kernels arising from polynomials and power series	55
4.4.1	Polynomial kernels	55
4.4.2	Power series on disks	56
4.4.3	Power series on balls	58
4.4.4	The Drury–Arveson space	60
4.4.5	The Segal–Bargmann space	61
4.4.6	Other power series	62
4.5	Exercises	62
5	Operations on kernels	65
5.1	Complexification	65
5.2	Differences and sums	66
5.3	Finite-dimensional RKHSs	68
5.4	Pull-backs, restrictions and composition operators	69
5.4.1	Composition operators	71
5.5	Products of kernels and tensor products of spaces	72
5.6	Push-outs of RKHSs	75
5.7	Multipliers of a RKHS	77
5.8	Exercises	80
6	Vector-valued spaces	82
6.1	Basic theory	82
6.1.1	Matrices of operators	86
6.2	A Vector-valued version of Moore's theorem	88
6.3	Interpolation	90
6.4	Operations on kernels	97
6.5	Multiplier algebras	98
6.6	Exercises	99

PART II APPLICATIONS AND EXAMPLES

7	Power series on balls and pull-backs	103
7.1	Infinite direct sums of Hilbert spaces	103
7.2	The pull-back construction	104
7.3	Polynomials and interpolation	106
	7.3.1 The Drury-Arveson space as a pull-back	109
	7.3.2 The Segal-Bargmann space	110
7.4	Exercises	110
8	Statistics and machine learning	112
8.1	Regression problems and the method of least squares	112
	8.1.1 Linear functions	113
	8.1.2 Affine functions	114
	8.1.3 Polynomials	115
8.2	The kernel method	116
8.3	Classification problems and geometric separation	118
8.4	The maximal margin classifier	120
8.5	Summary: a functional perspective	124
8.6	The representer theorem	125
8.7	Exercises	128
9	Negative definite functions	129
9.1	Schoenberg's theory	129
9.2	Infinitely divisible kernels	134
9.3	Exercises	135
10	Positive definite functions on groups	137
10.1	Naimark's theorem	137
10.2	Bochner's theorem	139
10.3	Negative definite functions and cocycles	140
10.4	Exercises	143
11	Applications of RKHS to integral operators	145
11.1	Integral operators	145
11.2	The range space of an integral operator	146
	11.2.1 The Volterra integral operator and the min kernel	149
11.3	Mercer kernels and integral operators	150
	11.3.1 An application of Mercer's theory	159
11.4	Square integrable symbols	160
11.5	Exercises	163

12	Stochastic processes	165
	12.1 Covariance	165
	12.2 Stochastic processes	167
	12.3 Gaussian random variables	169
	12.4 Karhunen–Loève theorem	176
	12.5 Exercises	178
	<i>Bibliography</i>	180
	<i>Index</i>	181
