<i>List of contributors</i>	page	xiii
<i>Preface</i>		xv
<i>Bibliography of J. F. C. Kingman</i>		1
1 A fragment of autobiography, 1957–1967		
<i>J. F. C. Kingman</i>		17
2 More uses of exchangeability: representations of complex random structures		
<i>David J. Aldous</i>		35
1 Introduction		35
2 Exchangeability		36
3 Using exchangeability to describe complex structures		43
4 Construction of, and convergence to, infinite random combinatorial objects		49
5 Limits of finite deterministic structures		56
6 Miscellaneous comments		59
3 Perfect simulation using dominated coupling from the past with application to area-interaction point processes and wavelet thresholding		
<i>G. K. Ambler and B. W. Silverman</i>		64
1 Introduction		65
2 Perfect simulation		66
3 Area-interaction processes		71
4 Nonparametric regression by wavelet thresholding		77
5 Perfect simulation for wavelet curve estimation		82
6 Conclusion		88
4 Assessing molecular variability in cancer genomes		
<i>A. D. Barbour and S. Tavaré</i>		91

1	Introduction	91
2	Colorectal cancer data	93
3	The Ewens sampling formula	95
4	Analysis of the cancer data	98
5	Poisson approximation	100
6	Conclusion	110
5	Branching out	
	<i>J. D. Biggins</i>	113
1	Introduction	113
2	The basic model	115
3	Spreading out: old results	116
4	Spreading out: first refinements	119
5	Spreading out: recent refinements	120
6	Deterministic theory	122
7	The multitype case	124
8	Anomalous spreading	125
9	Discussion of anomalous spreading	130
6	Kingman, category and combinatorics	
	<i>N. H. Bingham and A. J. Ostaszewski</i>	135
1	Introduction	135
2	Preliminaries	138
3	A bitopological Kingman theorem	143
4	Applications—rational skeletons	151
5	KBD in van der Waerden style	157
6	Applications: additive combinatorics	162
7	Long-range dependence in a Cox process directed by an alternating renewal process	
	<i>D. J. Daley</i>	169
0	Preamble	170
1	Introduction	170
2	Stationary renewal and alternating renewal processes	172
3	Second moments	178
4	An alternating renewal process not satisfying Condition A	180
5	Postlude	181
8	Kernel methods and minimum contrast estimators for empirical deconvolution	
	<i>Aurore Delaigle and Peter Hall</i>	185
1	Introduction	186

2	Methodology and theory	191
3	Relationship to minimum contrast methods	195
9	The coalescent and its descendants	
	<i>Peter Donnelly and Stephen Leslie</i>	204
1	Introduction	205
2	The coalescent and the Fleming–Viot process	206
3	Inference under the coalescent	213
4	The Li and Stephens model	215
5	Application: modelling population structure	221
10	Kingman and mathematical population genetics	
	<i>Warren J. Ewens and Geoffrey A. Watterson</i>	238
1	Introduction	238
2	Background	239
3	Putting it together	244
4	Robustness	247
5	A convergence result	248
6	Partition structures	249
7	‘Age’ properties and the GEM distribution	251
8	The coalescent	256
9	Other matters	260
11	Characterizations of exchangeable partitions and random discrete distributions by deletion properties	
	<i>Alexander Gnedin, Chris Haulk and Jim Pitman</i>	264
1	Introduction	265
2	Partition structures	266
3	Partially exchangeable partitions	274
4	Exchangeable partitions	278
5	The deletion property without the regularity condition	285
6	Regeneration and τ -deletion	286
12	Applying coupon-collecting theory to computer-aided assessments	
	<i>C. M. Goldie, R. Cornish and C. L. Robinson</i>	299
1	Introduction	299
2	Coupon collecting	300
3	How many tests?	302
4	Asymptotics	303
5	Proofs for §4	305
6	Numerical results	314

7	Discussion	315
13	Colouring and breaking sticks: random distributions and heterogeneous clustering	
	<i>Peter J. Green</i>	319
1	Introduction	319
2	Mixture models and the Dirichlet process	320
3	Applications and generalisations	325
4	Pólya urn schemes and MCMC samplers	329
5	A coloured Dirichlet process	333
14	The associated random walk and martingales in random walks with stationary increments	
	<i>D. R. Grey</i>	345
1	Introduction and definition	345
2	Three examples	349
3	Some remarks on duality and asymptotic independence	355
15	Diffusion processes and coalescent trees	
	<i>R. C. Griffiths and D. Spanó</i>	358
1	Introduction	359
2	A coalescent dual process	361
3	Processes with beta stationary distributions and Jacobi polynomial eigenfunctions	368
4	Subordinated Jacobi diffusion processes	371
5	Subordinated coalescent process	375
16	Three problems for the clairvoyant demon	
	<i>Geoffrey Grimmett</i>	380
1	Introduction	380
2	Site percolation	381
3	Clairvoyant scheduling	383
4	Clairvoyant compatibility	384
5	Clairvoyant embedding	385
6	Dependent percolation	390
7	Percolation of words	393
17	Homogenization for advection-diffusion in a perforated domain	
	<i>P. H. Haynes, V. H. Hoang, J. R. Norris and K. C. Zygalakis</i>	397
1	Introduction	398

2	Review of homogenization for diffusion with periodic drift	400
3	Existence of a volume growth rate for a diffusion sausage with periodic drift	402
4	Estimates for the diffusion sausage	403
5	Asymptotics of the growth rate for small and large cross-sections	405
6	Homogenization of the advection-diffusion equation in a perforated domain	408
7	The case of diffusivity $\varepsilon^2 I$	410
8	Monte Carlo computation of the asymptotic growth rate	411
18	Heavy traffic on a controlled motorway	
	<i>F. P. Kelly and R. J. Williams</i>	416
1	Introduction	416
2	A single queue	418
3	A model of Internet congestion	422
4	A Brownian network model	426
5	A model of a controlled motorway	430
6	Route choices	438
7	Concluding remarks	442
19	Coupling time distribution asymptotics for some couplings of the Lévy stochastic area	
	<i>W. S. Kendall</i>	446
1	Different kinds of couplings	448
2	Reflection coupling	450
3	Coupling more than one feature of the process	451
4	Conclusion	461
20	Queueing with neighbours	
	<i>V. Shcherbakov and S. Volkov</i>	464
1	Introduction	464
2	Results	467
3	Asymmetric interaction	470
4	Symmetric interaction	475
5	Appendix	480
21	Optimal information feed	
	<i>P. Whittle</i>	483
1	Interrogation, transmission and coding	483
2	A tractable infinite-horizon case	486

22 A dynamical-system picture of a simple branching-process phase transition

<i>David Williams</i>	491
1 Introduction	491
2 Wiener–Hopferization	493
3 How does ODE theory see the phase transition?	496
4 Proof of Theorem 1.1 and more	499
