<i>List of contributors</i>	<i>page</i>	ix
<i>Preface</i>		xi
<b>1 Gap distributions and homogeneous dynamics</b>		<b>1</b>
<i>Jayadev S. Athreya</i>		
1 Introduction		1
2 Meta-Theorems on Gap Distributions		12
3 Farey sequences		17
4 Saddle connections		19
5 Abstract Homogeneous Dynamics		22
6 Further Questions		27
References		30
<b>2 Topology of open nonpositively curved manifolds</b>		<b>32</b>
<i>Igor Belegradek</i>		
1 Flavors of negative curvature		33
2 Manifolds of dimensions two and three		36
3 Towards a rough classification of discrete isometry groups		38
4 Groups of non-parabolic isometries		40
5 Groups with rank one elements: prelude		42
6 Acylindrically hyperbolic groups and rank one elements		42
7 Bounded cohomology and rank one elements		45
8 Monod-Shalom's class and rank one elements		46
9 Groups that fix a point at infinity: prelude		47
10 Groups whose center contains a parabolic		50
11 Anchored groups and fixed points at infinity		51
12 Homotopy obstructions (after Gromov and Izeki-Nayatani)		55
13 Homeomorphism obstructions: exploiting $\mathbb{R}$ factors		56

14	Benefits of a lower curvature bound	58
15	Injectivity radius going to zero at infinity	59
16	Negatively curved manifolds with uniform volume bound	62
17	Non-aspherical ends of nonpositively curved manifolds	63
18	Riemannian hyperbolization (after Ontaneda)	66
19	Topology of known manifolds of bounded negative curvature	68
20	Zoo of finite volume rank one manifolds	72
	References	76
<b>3</b>	<b>Cohomologie et actions isométriques propres sur les espaces <math>L_p</math></b>	<b>84</b>
	<i>Marc Bourdon</i>	
1	Introduction	84
2	Cohomologie $\ell_p$	86
3	Actions isométriques propres sur les espaces $L_p$	99
	References	107
<b>4</b>	<b>Compact Clifford–Klein Forms – Geometry, Topology and Dynamics</b>	<b>110</b>
	<i>David Constantine</i>	
1	Introduction	110
2	Notation	116
3	Topology	116
4	Geometry	123
5	Dynamics	126
6	Deformations and moduli spaces of compact forms	131
7	The road ahead	139
	References	142
<b>5</b>	<b>A survey on noncompact harmonic and asymptotically harmonic manifolds</b>	<b>146</b>
	<i>Gerhard Knieper</i>	
1	Introduction	146
2	Basics on Jacobi tensors on manifolds without conjugate points	149
3	Volume growth on asymptotically harmonic manifolds	156
4	Density functions of harmonic manifolds	160
5	Harmonic manifolds with subexponential volume growth are flat	163
6	The rank of an asymptotically harmonic manifold	169

7	Characterization of hyperbolicity for asymptotically harmonic manifolds	175
8	Harmonic manifolds with bounded asymptote	181
9	Harmonic and asymptotically harmonic manifolds without focal points	185
	References	195
<b>6</b>	<b>The Atiyah conjecture</b>	<b>198</b>
	<i>Peter A. Linnell</i>	
1	Introduction	198
2	Notation and Terminology	200
3	Group von Neumann algebras and dimension	201
4	Formulation of the Atiyah conjecture	202
5	Early results on the Atiyah conjecture	206
6	Approximation Techniques	206
7	Finite extensions	208
8	Pro- $p$ groups of finite rank	211
9	Approximation over arbitrary fields	216
	References	218
<b>7</b>	<b>Cannon-Thurston Maps for Surface Groups: An Exposition of Amalgamation Geometry and Split Geometry</b>	<b>221</b>
	<i>Mahan Mj</i>	
1	Introduction	221
2	Preliminaries and Amalgamation Geometry	223
3	Relative Hyperbolicity	228
4	Universal Covers of Building Blocks and Electric Geometry	238
5	Construction of Quasiconvex Sets and Quasigeodesics	242
6	Cannon-Thurston Maps for Surfaces Without Punctures	253
7	Weakening the Hypothesis I: Graph Quasiconvexity and Graph Amalgamation Geometry	255
8	Weakening the Hypothesis II: Split Geometry	259
	References	270
<b>8</b>	<b>Counting visible circles on the sphere and Kleinian groups</b>	<b>272</b>
	<i>Hee Oh and Nimish Shah</i>	
1	Introduction	272
2	Equidistribution of normal translates of a hyperbolic surface	277
3	Proof of Theorem 3	282

4	Counting with respect to Euclidean curvature	285
	References	287
<b>9</b>	<b>Counting arcs in negative curvature</b>	<b>289</b>
	<i>Jouni Parkkonen and Frédéric Paulin</i>	
1	Introduction	289
2	Geometry and dynamics in negative curvature	291
3	Common perpendiculars of convex sets	300
4	Using Eskin-McMullen's equidistribution theorem	309
5	Arithmetic applications	312
6	Patterson, Bowen-Margulis and skinning measures	322
7	Finite volume hyperbolic manifolds	326
8	The main counting result of common perpendiculars	332
9	Spectral gaps, exponential decay of correlations and error terms	335
10	Gibbs measures and counting arcs with weights	337
	References	340
<b>10</b>	<b>Lattices in hyperbolic buildings</b>	<b>345</b>
	<i>Anne Thomas</i>	
1	Buildings and hyperbolic buildings	346
2	Lattices	354
	References	360
