

Contents

Synthesis, Structure, and Bonding

Some Recent Studies on Poly(tertiary phosphines) and Their Metal Complexes, <i>R. Bruce King</i>	1
Carbamoyl and Alkoxycarbonyl Complexes of Transition Metals, <i>Robert J. Angelici</i>	10
Mixed-Valence Ferrocene Chemistry, <i>Dwaine O. Cowan, Carole LeVanda, Jongsei Park, and Frank Kaufman</i>	17
Tricobalt Carbon, an Organometallic Cluster, <i>Bruce R. Penfold and Brian H. Robinson</i>	24
Stereochemical Studies of Metal Carbonyl–Phosphorus Trifluoride Complexes, <i>Ronald J. Clark and Marianna Anderson Busch</i>	33
Transition Metal Atom Inorganic Synthesis in Matrices, <i>Geoffrey A. Ozin and Anthony Vander Voet</i>	40
On the Interpretation of the Optical Spectra of Hexahalogen Complexes of 4d and 5d Transition Metal Ions, <i>Peter C. Jordan</i>	46
Cobalt-59 Nuclear Quadrupole Resonance Spectroscopy, <i>Theodore L. Brown</i>	52
The Coordination Chemistry of Nitric Oxide, <i>Richard Eisenberg and Carol D. Meyer</i>	60
Inorganic Chemistry with Ylides, <i>Hubert Schmidbaur</i>	69
Solid-State Pressure Effects on Stereochemically Nonrigid Structures, <i>John R. Ferraro and Gary J. Long</i>	78
Spectroscopic Investigations of Excited States of Transition-Metal Complexes, <i>Glenn A. Crosby</i>	87

Redox Chemistry

Organometallic Electrochemistry, <i>Raymond E. Dessy and Leo A. Bares</i>	95
Electron-Transfer Mechanisms for Organometallic Intermediates in Catalytic Reactions, <i>Jay K. Kochi</i>	103
Role of the Bridging Ligand in Inner-Sphere Electron-Transfer Reactions, <i>Albert Haim</i>	114

Organometallic Reactions and Catalytic Applications

The Olefin Metathesis Reaction, <i>Nissim Calderon</i>	123
Addition Reactions of Butadiene Catalyzed by Palladium Complexes, <i>Jiro Tsuji</i>	130
Palladium(II)-Catalyzed Exchange and Isomerization Reactions, <i>Patrick M. Henry</i>	138
Some Aspects of Organoplatinum Chemistry. Significance of Metal-Induced Carbonium Ions, <i>Malcolm H. Chisholm and Howard C. Clark</i>	147
Rapid Intramolecular Rearrangements in Pentacoordinate Transition Metal Compounds, <i>John R. Shapley and John A. Osborn</i>	156
Catalysis of Olefin and Carbon Monoxide Insertion Reactions, <i>Gian Paolo Chiusoli</i>	165
Homogeneous Catalytic Activation of C–H Bonds, <i>George W. Parshall</i>	172

Applications to Organic Synthesis

Organoiron Complexes as Potential Reagents in Organic Synthesis, <i>Myron Rosenblum</i>	178
Approaches to the Synthesis of Pentalene <i>via</i> Metal Complexes, <i>Selby A. R. Knox and F. Gordon A. Stone</i>	186
Disodium Tetracarbonylferrate—A Transition-Metal Analog of a Grignard Reagent, <i>James P. Collman</i>	194
Organic Chemistry of Metal Vapors, <i>Kenneth J. Klabunde</i>	200

Transition Metal Chemistry of Biological Interest

Iron–Sulfur Coordination Compounds and Proteins, <i>Stephen J. Lippard</i>	208
The Biochemical Significance of Porphyrin π Cation Radicals, <i>David Dolphin and Ronald H. Felton</i>	216
Novel Metalloporphyrins—Syntheses and Implications, <i>David Ostfeld and Minoru Tsutsui</i>	224
Resonance Raman Spectroscopy: A New Structure Probe for Biological Chromophores, <i>Thomas Spiro</i>	231
Mechanism of Cobalamin-Dependent Rearrangements, <i>Bernard M. Babor</i>	237
Synthetic Oxygen Carriers of Biological Interest, <i>Fred Basolo, Brian M. Hoffman, and James A. Ibers</i>	246
Index	257
