

CONTENTS

Preface	v
1. Introduction	1
1.1. Definitions	1
1.2. The analogy between carbonium carbon and boron	4
1.3. Nomenclature of carbonium ions	5
1.4. Historical: early evidence for carbonium ions (1901-1946)	6
2. Experimental Techniques for the Detection and Study of Carbonium Ions	12
2.1. General considerations	12
2.2. Crystallography and infra-red spectroscopy of solid salts	13
2.3. Spectroscopy of solutions	15
2.3.1. Nuclear magnetic resonance spectra	16
2.3.2. Infrared spectra	24
2.3.3. Electronic spectra	25
2.4. Colligative properties	28
2.5. Electrolyte behaviour	28
2.5.1. Conductivity measurements	28
2.5.2. Electrolysis	29
2.5.3. EMF measurements	30
2.5.4. Polarography	30
2.6. Reaction kinetics	31

2.6.1. Mechanistic classification	32
2.6.2. Rate laws	32
2.6.3. Effects of added salts	36
2.6.4. Trapping of carbonium ions	37
2.6.5. Activation parameters	39
2.7. Chemical methods	39
2.7.1. Racemization	40
2.7.2. Rearrangement	40
2.7.3. Elimination	42
 3. Sources of Carbonium Ions	 44
3.1. General considerations	44
3.2. Heterolytic fission of a larger molecular entity	46
3.3. Addition of cations to neutral molecules	53
3.4. Electron removal from neutral species	57
 4. Formation of Carbonium Ions: Quantitative Aspects	 59
4.1. Energetics of carbonium-ion formation	59
4.1.1. General consideration	59
4.1.2. The quantitative definition of carbonium-ion stability	60
4.1.3. Ionization potentials and appearance potentials	62
4.1.4. Electrical conductance	68
4.1.5. Spectrophotometry	71
Ionization of triazylmethyl halides	72
Ionization of alcohols in acidic media	73
Proton addition to unsaturated systems	81
4.1.6. Distribution and vapour pressure measurements	85
4.1.7. EMF measurements	87
4.2. Rates of carbonium-ion formation	88
4.2.1. The status of rate measurements in relation to carbonium-ion stability	88
4.2.2. S_N1 reactions	90
4.2.3. Substituent effects: σ^+ and σ^* values	95
4.2.4. Heterolytic reactions in the gas phase	101
4.2.5. Aromatic hydrogen isotope exchange	105

4.2.6. Olefin hydration	108
4.2.7. Isotope effects	109
4.3. Survey of stable carbonium ions	110
5. Factors Governing the Stability of Carbonium Ions	117
5.1. General considerations	117
5.2. Internal factors	118
5.2.1. Electrostatic arguments	118
5.2.2. General aims of quantum-mechanical calculations on carbonium ions	119
5.2.3. The HMO method for conjugated carbonium ions	121
5.2.4. The extent of planarity of conjugated carbonium ions	128
5.2.5. Substituent effects and modifications of the HMO method for conjugated carbonium ions	129
5.2.6. Aliphatic carbonium ions	133
5.3. External factors	136
5.3.1. Introduction: some electrostatic considerations	136
5.3.2. Solvation of carbonium ions	139
The nature of the interaction between carbonium ions and the solvent	139
Energetics of solvation. Definitions	140
Effect of the structure of the carbonium ion	142
Effect of the solvent	144
Measures of solvent polarity	147
5.3.3. Interaction of carbonium ions with other ions	148
Non-specific interaction	148
Ion association. Electrostatic theory	150
Evidence for ion-pair formation in carbonium-ion reactions	152
5.3.4. Charge transfer	159
6. Reactions of Carbonium Ions	160
6.1. Introduction	160
6.1.1. Carbonium ions as electrophiles	160
6.1.2. The reaction products	161

6.1.3. Chemical consequences of charge delocalization	164
6.1.4. Influence of the source of the ion on carbonium-ion reactions	166
6.2. Attack of carbonium centres on non-bonded electron pairs	168
6.2.1. Introduction	168
6.2.2. The influence of the nucleophile	169
6.2.3. Effect of carbonium-ion structure on reactivity	171
6.2.4. Stereochemistry	174
Reaction at an asymmetric carbon atom	174
Reactions of allyl cations	177
6.3. Attack of carbonium centres on π -bond electrons	179
6.3.1. Introduction	179
6.3.2. Aromatic alkylation	179
Nature of the reaction	179
The reactivity of aromatic compounds	182
The influence of carbonium-ion structure on reactivity	185
6.3.3. Reaction of carbonium ions with olefins	186
Scope and nature of the reaction	186
Cationic vinyl polymerization	188
Olefin structure and reactivity	190
6.3.4. Attack of carbonium centres on C-X multiple bonds	192
6.4. Attack of carbonium centres on σ -bond electrons	194
6.4.1. Introduction	194
6.4.2. Olefin formation and related reactions	195
E1 Elimination. Mechanism	195
The effect of carbonium-ion structure	197
Fragmentation of carbonium ions	200
6.4.3. Carbonium-ion rearrangements	204
The scope and nature of the reaction	204
The mechanism and stereochemical course of rearrangement	207
Structural effects on carbonium ion rearrangements.	
The direction of rearrangement	211
Migratory aptitude	212
6.4.4. Intermolecular hydride transfer	218
Introduction	218
Scope of the reaction	219
Structural effects	220

7. Bridged Carbonium Ions	222
7.1. Terminology	222
7.2. History	225
7.2.1. Neighbouring-group participation	225
Neighbouring acetoxyl	226
Neighbouring bromine	227
7.2.2. Bridged carbonium ions	229
7.3. Experimental criteria of bridged-ion formation	231
7.3.1. Physical methods	231
7.3.2. Kinetic data	231
7.3.3. The reaction products	235
7.3.4. Stereochemistry	236
7.4. Electron-sufficient bridged carbonium ions	239
7.4.1. Aryl-bridged ions	239
The 3-phenyl-2-butyl system	239
Other β -phenylethyl systems	243
Substituents in the phenyl bridge	246
Bridging of non-adjacent carbon atoms	248
Aryl bridging in cyclic systems	249
7.4.2. Alkenyl-bridged ions: homoallylic cations	250
Open-chain systems	250
Cyclic systems	253
Cycloalkenylmethyl systems	254
Cycloalkenyl systems	255
Bicyclo[2,2,1]heptyl and related systems	256
Cholesteryl and related systems	261
7.5. Electron-deficient bridged carbonium ions	263
7.5.1. Alkyl- and hydrogen-bridging in acyclic systems	263
7.5.2. The cyclopropylmethyl-cyclobutyl and related problems	266
7.5.3. Bicyclo[2,2,1]heptyl and related systems	271
Norbornyl compounds	271
Substituted norbornyl compounds	277
7.5.4. Other saturated bicyclic systems	279
7.6. Bridged carbonium ions in the gas phase	280
7.7. Conclusion	282

8. Related Species	283
8.1. Acylium ions	283
8.1.1. Nomenclature	283
8.1.2. Stable acylium ions: physical evidence	283
Conductivity	283
Cryoscopy in sulphuric acid	284
Absorption spectroscopy	285
8.1.3. Acylium ions as reaction intermediates	287
Substitution by nucleophiles having non-bonded electrons	288
Aromatic acylation: substitution of acyl derivatives by aromatic nucleophiles	290
Other reactions	292
8.2. Other species with reactive centres on carbon	294
8.2.1. Carbenes	294
Formation of carbenes	295
Reactions of singlet carbenes	295
8.2.2. Radical cations	299
8.3. Hetero-atom analogues	302
8.3.1. Introduction	302
8.3.2. Siliconium ions	303
8.3.3. Others	304
Appendix: A Bibliography of Carbonium-ion Chemistry	306
References	312
Author Index	349
Subject Index	367
