

Contents—Volume I

Foreword by Sir Christopher Ingold	vii
Editor's Preface	xi
I. Historical by George A. Olah and Robert E. A. Dear	1
I. Introduction	1
II. Biographical Sketch of C. Friedel and J. M. Crafts	1
1. Charles Friedel (1832–1899)	1
2. James Mason Crafts (1839–1917)	5
III. Historical Review of the Discovery and Development of the Aluminum Chloride Reaction	8
IV. Bibliography of C. Friedel and J. M. Crafts in the Field of the Aluminum Chloride Reactions	19
II. Definition and Scope by George A. Olah	25
I. Introduction	25
II. General Considerations	26
1. Catalysts	26
2. Definition of Term "Friedel-Crafts Reactions"	28
3. Composition of Reaction Systems	29
4. Atoms to be Substituted	30
5. Division of Reactions	31
A. According to Formation of Carbonium-Ion Type Reagents.	31
B. According to Generalized Type of Reactions	32
III. Alkylation (including Isomerization and Polymerization)	32
1. Alkylation of Aromatic Compounds	32
A. Alkylating Agents and Catalysts	32
B. Activity of Catalysts	33
C. Reactivity of Aromatics	34
D. Dealkylation, Transalkylation, and the Question of Reversibility	36
E. Factors Influencing Mono- and Polyalkylations	39
F. Orientation	40
2. Alkylating Agents in Aromatic Alkylations	40
A. Alkyl Halides	40
B. Alkenes	43
C. Alkynes	45
D. Alcohols	46
E. Esters	49
F. Ethers	50
G. Aldehydes and Ketones	51
H. Alkanes and Cycloalkanes	53
I. Lactones	54
J. Mercaptans	54
K. Sulfides (Thioethers)	55
L. Thiocyanates	55

M. Sulfenyl Chlorides and Sultones	55
N. Deuterium Halides (Aromatic Hydrogen Exchange)	56
3. Cyclialkylation of Aromatic Compounds	56
A. Intermolecular Cyclialkylations	57
a. Dihalides	57
b. Diols	58
c. Diolefins	58
B. Intramolecular Cyclialkylation	59
a. Aralkyl halides	59
b. Aralkenes	60
c. Aralkanes	61
d. Arylaliphatic alcohols	61
e. Aralkyl carbonyl compounds	62
f. Phenylethylamides (Bischler-Napieralski and related reactions)	63
4. Arylations of Aromatic Compounds	63
A. Dehydrogenating Condensation (Scholl Reaction).	63
B. Aryl Halides	65
C. Diazonium Halides	66
5. Isomerization in Aromatic Alkylations	68
A. Skeletal	68
a. Rearrangement of alkylating agent	69
b. Rearrangement of alkyl aromatics	69
B. Positional	70
a. Intramolecular	70
b. Intermolecular	71
c. Effect of isomerizations accompanying alkylations	72
6. Alkylation with Metal and Organometallic Halides	72
7. Alkylation of Aliphatic Compounds	75
A. Alkanes	76
B. Alkenes	80
a. With alkyl halides	80
b. With alcohols	81
c. With mercaptans	82
d. With carbonyl compounds: Prins reaction	83
C. Alkynes	84
a. With alkyl halides	84
b. With alcohols	84
D. Active Methylene Compounds	85
8. Isomerization of Saturated Hydrocarbons.	86
A. Catalysts.	86
B. Initiation by Carbonium-Ion Type Intermediates.	86
C. Side Reactions Accompanying Isomerization	87
9. Polymerization	88
A. Catalysts.	88
B. The Role of Co-catalysts	89
C. Types of Polymers	89
IV. Acylation (including Halogenation and Related Reactions)	91

1. Aromatic Ketone Synthesis	91
A. Scope	91
B. Sequence of Addition of Reagents	91
a. Friedel-Crafts, Elbs procedure	92
b. Bouveault procedure	92
c. Perrier procedure	92
C. Amount and Role of Catalyst	93
D. Isomerization Accompanying Acylation	95
E. Acylation of Substituted Benzenoid Aromatics	96
a. Deactivating substituents	97
b. Phenols	97
c. Fries reaction	99
d. Amines	100
F. Heterocyclic Compounds	100
G. Di- and Polyacylation	101
H. Replacement and Deacylation during Ketone Syntheses	102
2. Acylating Agents in Aromatic Ketone Syntheses	102
A. Acyl Halides	102
a. Relative reactivity	103
b. Side reactions and decomposition	103
c. Unsaturated acyl halides	104
d. Haloacyl halides	105
e. Dibasic acid halides	105
B. Acid Anhydrides	106
a. Monocarboxylic acid anhydrides	106
b. Dicarboxylic acid anhydrides	107
c. Sulfocarboxylic acid anhydrides	107
C. Carboxylic Acids	108
D. Esters	110
E. Ketene, Carbon Suboxide	110
F. Nitriles (Houben-Hoesch Synthesis)	111
G. Amides	112
3. Cycliacylation of Aromatic Compounds	113
A. Intramolecular	113
B. Intermolecular, by Bifunctional Acylating Agents	114
4. Aromatic Aldehyde Syntheses	115
A. Gattermann-Koch Synthesis	115
B. Formylation with Formyl Fluoride	116
C. Gattermann Reaction	117
D. Vilsmeier Aldehyde Synthesis	118
E. Formylation with Orthoformic Acid Derivatives	118
5. Syntheses of Aryl Nitriles and Aldoximes	119
A. Mercuric Fulminate	119
B. Cyanogen Halides	119
C. Trichloroacetonitrile (Houben-Fischer Synthesis)	120
6. Syntheses of Arylcarboxylic Acids and Derivatives	120
A. Carbonyl Halides	120
B. Carbamyl Chlorides (Gattermann Amide Synthesis)	121

C. Isocyanates	121
D. Carbon Dioxide	121
E. Miscellaneous	122
7. Aromatic Sulfonylation	122
8. Aromatic Sulfonation	123
9. Aromatic Sulfinatation	123
10. Aromatic Nitration	123
A. Nitric Acid	124
B. Nitryl Halides	124
C. Nitrogen Oxides	124
D. Nitronium Salts	125
11. Aromatic Amination	125
12. Aromatic Perchlorylation	126
13. Aromatic Halogenation	126
A. Catalysts and Halogenating Agents	126
B. The Problem of Fluorination	128
C. Thiocyanation	128
14. Acylation of Aliphatic and Cycloaliphatic Compounds	129
A. Alkenes	129
a. With acyl halides	129
b. With acid anhydrides	132
c. With carboxylic acids	133
B. Alkynes	134
a. With acyl halides	134
b. With anhydrides	134
c. With carboxylic acids	134
C. Alkanes	135
a. With acyl halides	135
b. With carbon monoxide	136
D. Aldehydes and Ketones	136
a. With acid anhydrides	136
b. With ketene	137
E. Alcohols	138
a. With acyl halides	138
b. With acid anhydrides	139
c. With carboxylic acids	139
d. With amides	141
F. Ethers	141
a. With acyl halides	141
b. With acid anhydrides	142
c. With carboxylic acids	142
G. Carboxylic Acids	142
H. Thiols	142
15. Aliphatic Aldehyde Syntheses	143
16. Syntheses of Aliphatic Carboxylic Acids and Derivatives	144
17. Aliphatic Sulfonylation	146
18. Aliphatic Nitration	147
19. Aliphatic Halogenation	147
A. Addition to Alkenes and Alkynes	147

B. Substitution of Alkanes	149
C. Substitution of Ethers and Alcohols	149
D. Fluorination	150
III. Proton Acids and Lewis Acids <i>by R. J. Gillespie</i>	169
I. Introduction	169
1. Definitions	169
A. The Arrhenius Definition	170
B. The Brønsted Definition	170
C. The Lewis Definition	173
D. Comparison of the Brønsted and Lewis Definitions	173
E. The Solvent-System Definition	176
II. Proton Acids	176
1. Acid Strength and Molecular Structure	176
A. Hydrides	176
B. Oxy-acids	178
2. The Effect of the Solvent	179
3. Concentrated Aqueous Solutions of Acids	181
A. Molecular Constitution	181
B. The Hammett Acidity Function	182
4. Strong Proton Acids as Solvents	185
A. Sulfuric Acid	185
B. Hydrogen Fluoride	189
C. Fluorosulfuric Acid	191
III. Lewis Acids	191
1. Types of Lewis Acids	191
A. Cations	191
B. Molecules with One or More Vacant Orbitals on a Central Atom	192
C. Molecules Containing Double Bonds	194
2. Strengths of Lewis Acids	194
IV. Catalysts and Solvents <i>by George A. Olah</i>	201
I. The Nature of Catalysts	201
1. Acidic Halides (Lewis Acids)	201
2. Metal Alkyls and Alkoxides	202
3. Proton Acids (Brønsted Acids)	202
4. Acidic Oxides and Sulfides (Acidic Chalcides)	203
5. Cation Exchange Resins	204
6. Metathetic Cation-forming Agents	204
II. The Role of Co-catalysts and the General Acid Nature of Catalysts	205
1. The Question of "Anhydrous" Aluminum Chloride and Related Halide Catalysts	205
2. Promoter Effect of Water and Other Impurities	206
3. Inactivity of Pure Anhydrous Lewis Acid Halides in Isomerization, Polymerization and Alkylation	207
4. Necessity of Co-catalysts	208
5. Nature of Co-catalysts	210
6. Conjugate Friedel-Crafts Acids of the Type $\text{HMX}_{4,6}$	210

7.	Effect of Oxygen as Co-catalyst	213
8.	Division and Mode of Action of Catalysts and Co-catalysts	214
III.	Acidic Halide Lewis Acid Catalysts	215
1.	Group IB Halides	215
A.	Copper Halides	215
a.	Copper(I) halides	215
b.	Copper(II) halides	216
B.	Silver Halides	217
C.	Gold Halides	217
2.	Group IIA Halides	218
A.	Beryllium Halides	218
B.	Magnesium Halides	220
C.	Alkaline-Earth Halides	221
3.	Group IIB Halides	222
A.	Zinc Halides	223
B.	Cadmium Halides	224
C.	Mercury Halides	225
4.	Group III Halides	226
A.	General Consideration and Comparison of Boron and Aluminum Halides	226
B.	Boron Trifluoride	227
a.	Properties and structure	227
b.	Catalytic activity	228
c.	Coordination compounds as catalysts	230
C.	Boron Trichloride	235
a.	Structure and properties	235
b.	Catalytic activity	235
D.	Boron Tribromide and Triiodide	236
a.	Structure	236
b.	Catalytic activity	236
	Aluminum Halides	237
E.	Aluminum Trifluoride	237
F.	Aluminum Trichloride	239
a.	Properties and structure	239
b.	Catalytic activity	242
c.	Soluble aluminum chloride catalysts	244
d.	Aluminum chloride "sludges"	245
e.	Aluminum chloride monomethanolate	245
f.	Aluminum chloride-nitroalkane complexes	246
g.	Aluminum chloride-nitrobenzene	247
h.	Aluminum chloride-tertiary amine complexes	247
i.	Effect of complexing on catalytic activity	247
j.	Double salts with alkali metal chlorides	248
G.	Aluminum Tribromide	249
a.	Properties	249
b.	Catalytic activity	249
H.	Aluminum Triiodide	252

5.	Group IIIB Halides	253
	A. Gallium Halides	253
	B. Indium Halides	254
	C. Thallium Halides	255
6.	Group IVB Halides	256
	A. Silicon Halides	256
	B. Germanium Halides	257
	C. Tin Halides	258
	D. Lead Halides	259
7.	Actinide Halides	259
	A. Thorium Halides	260
	B. Uranium Halides	260
8.	Group IVA Halides	261
	A. Titanium Halides	262
	B. Zirconium Halides	263
	C. Hafnium Halides	264
9.	Group VA Halides	264
	A. Niobium and Tantalum Halides	265
	B. Vanadium Halides	265
10.	Group VB Halides	266
	A. Phosphorus Halides	267
	B. Arsenic Halides	268
	C. Antimony Halides	269
	D. Bismuth Halides	271
11.	Group VIB Halides	271
	A. Selenium Halides	272
	B. Tellurium Halides	272
12.	Group VIA Halides	273
	A. Chromium Halides	273
	B. Molybdenum Halides	274
	C. Tungsten Halides	275
13.	Group VIIA Halides	276
	A. Manganese Halides	276
	B. Rhenium Halides	276
14.	Group VIIB Halides (Interhalogens)	277
15.	Group VIII Halides	278
	A. Iron Halides	279
	B. Cobalt Halides	280
	C. Nickel Halides	281
	D. Ruthenium Halides	281
	E. Rhodium and Osmium Halides	282
	F. Iridium Halides	282
	G. Platinum Halides	282
16.	Rare-Earth or Lanthanide Halides	283
	A. Cerium Halides	283
	B. Neodymium Halides	283
17.	Survey of Acidic Halide Catalysts	283
IV.	Amount of Catalyst Required	291
V.	Purity of Catalysts	294
VI.	Effect of Solubility and Particle Size of Catalyst	296

	1. Effect of Physical Nature of Catalyst	296
	2. Solution by Complex Formation	297
	3. Solvents	298
VII.	Solvent Effects	302
VIII.	Effect of Temperature	304
IX.	Catalytic Activity of Acidic Halides in Aqueous Media	307
X.	Acidic Oxyhalide Catalysts	308
XI.	Metal Powder Catalysts Effecting Reactions with Halide Reagents (<i>in situ</i> formation of acidic halides)	309
XII.	Metal Oxide Catalysts Effecting Reactions with Halide Reagents (<i>in situ</i> formation of acidic halides)	311
XIII.	Metal Alkyl Lewis Acid Catalysts	312
XIV.	Metal Alkoxide Lewis Acid Catalysts	314
XV.	Brønsted Acid Catalysts	315
	1. Sulfuric Acid	315
	2. Hydrogen Fluoride	317
	3. Hydrogen Chloride	321
	4. Hydrogen Bromide	323
	5. Hydrogen Iodide	323
	6. Phosphoric Acid	323
	7. Polyphosphoric Acid (PPA)	323
	8. Fluoroboric and Hydroxyfluoroboric Acids	325
	9. Miscellaneous Inorganic Acids	327
	10. Organic Acid Catalysts	327
	11. Survey of Brønsted Acid Catalysts	327
	A. Inorganic Acids	328
	B. Organic Acids	328
XVI.	Acidic Oxide (Sulfide) Catalysts (Acidic Chalcides)	329
	1. Types of Acidic Chalcide Catalysts	329
	2. Nature of Acidity	330
	A. Alumina	330
	B. Silica-Alumina	331
	C. Silica-Magnesia	335
	D. Silica-Zirconia	336
	E. Alumina-Boria	337
	F. Titania-Boria	337
	3. Friedel-Crafts Type Reactions Catalyzed by Acidic Chalcide Catalysts	338
XVII.	Acidic Cation Exchanger Catalysts	342
	1. Types	342
	2. Catalytic Activity	343
	3. Survey of Acidic Cation Exchanger Catalysts	344
XVIII.	Metathetic Cation-forming Substances	345
XIX.	Stable Carbonium and Related Complexes as Catalysts for Reactions of the Friedel-Crafts Type	346
V.	Lewis Acid Catalysts in Non-aqueous Solutions <i>by M. Baaz and V. Gutmann</i>	367
	I. Introduction	367
	II. Solutions of Lewis Acid Catalysts	367

1.	Solvation	368
A.	Solvation Strength	368
B.	Solvation Numbers	371
C.	The Problem of the Donor Atom in the Donor Molecule	373
2.	Ionization	373
A.	Ionization by Halide-Ion Transfer	374
B.	Ionization of a Solvate Complex	374
C.	Ionization with Formation of Autocomplex Ions	375
3.	Dissociation	376
4.	Association	376
III.	Equilibria with Chloride-Ion Donors	377
1.	Coordination Forms of Chlorides in the Presence of Chloride Ions in Different Solvents	377
2.	Chloride-Ion Affinities	382
A.	Absolute Chloride-Ion Affinities	382
B.	Relative Chloride-Ion Affinities	385
IV.	Equilibria with Chloride-Ion Acceptors	388
1.	Coordination Forms of Chloronium Compounds	389
2.	Chloride-Ion Donor Strengths	391
V.	Equilibria with Other Lewis Bases	393

VI. Coordination Compounds of the Boron Halides *by Donald*

<i>R. Martin and James M. Canon</i>	399
I. Introduction	399
II. Boron Trifluoride Compounds	402
1. Group 0	402
2. Group I	403
A. Hydrogen	403
3. Group IV	403
4. Group V	406
A. Nitrogen	406
B. Phosphorus	420
C. Arsenic	422
5. Group VI	422
A. Oxygen	422
a. Inorganic adducts	422
b. Organic adducts	433
B. Sulfur	452
C. Selenium	453
6. Group VII	453
A. Fluorine	453
B. Chlorine	467
C. Bromine	469
D. Iodine	469
III. Boron Trichloride Compounds	469
1. Group 0	469
2. Group IV	470
3. Group V	471
A. Nitrogen	471

	B. Phosphorus	478
	C. Arsenic	479
	D. Antimony	479
4.	Group VI	480
	A. Oxygen	480
	a. Inorganic adducts	480
	b. Organic adducts	483
	B. Sulfur	490
5.	Group VII	491
	A. Fluorine	491
	B. Chlorine	491
	C. Bromine	500
IV.	Boron Tribromide Compounds	500
	1. Group 0	500
	2. Group IV	500
	3. Group V	501
	A. Nitrogen	501
	B. Phosphorus	507
	C. Arsenic	508
	D. Antimony	508
	4. Group VI	509
	A. Oxygen	509
	a. Inorganic adducts	509
	b. Organic adducts	509
	B. Sulfur	510
	5. Group VII	511
	A. Chlorine	511
	B. Bromine	512
	C. Iodine	513
V.	Boron Triiodide Compounds	514
	1. Nitrogen	514
	2. Phosphorus	515
	3. Iodine	515
	Selected Physical Properties of Boron Halide Adducts	516
VII.	Coordination Compounds of Aluminum and Gallium	
	Halides by N. N. Greenwood and K. Wade	569
	I. Complexes of Aluminum Halides	569
	1. Introduction	569
	2. Organic Ligands	581
	A. Hydrocarbons	581
	a. Aromatic hydrocarbons	581
	b. Aromatic hydrocarbons and hydrogen halides.	582
	c. Olefins	583
	B. Nitrogen Compounds.	583
	a. Amines	583
	b. Nitriles	583
	c. Nitro compounds	584

C.	Phosphorus and Arsenic Compounds	584
D.	Oxygen Compounds	585
a.	Ethers	585
b.	Ethers and hydrogen chloride	585
c.	Aldehydes and ketones	585
d.	Alcohols	586
e.	Carboxylic acids	586
f.	Acid anhydrides	586
g.	Esters	586
h.	Acid amides	587
i.	Acyl halides	587
E.	Sulfur Compounds	587
F.	Alkyl and Aryl Halides	587
3.	Inorganic Ligands	588
A.	Nitrogen Compounds	588
a.	Ammonia	588
b.	Hydrogen cyanide	589
c.	Cyanogen halides	589
d.	Nitric oxide	589
e.	Nitrosyl chloride	590
B.	Phosphorus Compounds	590
a.	Phosphine	590
b.	Phosphorus oxychloride	590
c.	Phosphorus pentachloride	590
C.	Arsenic Compounds	591
a.	Arsenic	591
b.	Arsenic halides	591
D.	Antimony Compounds	591
a.	Antimony trihalides	591
b.	Antimony pentahalides	591
E.	Bismuth Compounds	591
F.	Sulfur Compounds	592
a.	Hydrogen sulfide	592
b.	Sulfur dioxide	592
c.	Thionyl chloride	592
d.	Sulfur and sulfur chlorides	593
G.	Selenium and Tellurium Compounds	593
H.	Miscellaneous Halides	593
a.	Iodine halides	593
b.	Hydrogen halides	594
c.	Diphenylchloroborane	594
d.	Gallium monobromide	594
e.	Carbonyl chloride	594
I.	Inert Gases	594
II.	Complexes of Gallium Trihalides	595
1.	Introduction	595
2.	Organic Ligands	596
3.	Inorganic Ligands	599
III.	Thermochemical Data	600
1.	Aluminum Halides	600

2. Gallium Halides	603
IV. Electrical Conductivity and Related Properties	606
VIII. Intermediate Complexes <i>by George A. Olah and Max W. Meyer</i>	623
I. Introduction	623
1. Donor-Acceptor Interactions in Friedel-Crafts Systems	623
2. The Role of Intermediate Complexes on the Course of Reactions	626
A. Formation of Electrophilic Reagents	626
B. Effect on Thermodynamic Driving Force of Reactions	627
C. Effect on Product and Isomer Distributions	627
D. Aid in Achieving Homogeneous Reaction Conditions	627
E. Use in Establishing Reaction Mechanisms	627
3. Division of Complexes according to Major Types	628
II. Alkyl, Cycloalkyl, Aralkyl, and Aryl Halides	630
1. Alkyl Halide-Lewis Acid Halide Complexes	630
A. Physical Investigations of Complex Formation in Solution	631
a. Electric conductivity and electrolysis	632
b. Vapor pressure	636
c. Thermal analysis	640
d. Spectroscopic investigations	640
B. Attempted Isolation of Stable Complexes	642
2. Aralkyl Halide-Lewis Acid Halide Complexes	646
A. Triarylmethyl Halides	646
B. Benzhydryl and Benzyl Halides	650
3. Aryl Halide Complexes	651
A. σ -Complexes	651
B. π -Complexes	651
C. n -Complexes	652
III. Olefins	655
1. Olefin-Lewis Acid Halide Complexes	655
A. Effect of Third Substance (Co-catalyst)	655
B. Attempted Isolation of Stable Complexes	657
C. Olefin-Lewis Acid Halide-Co-catalyst Systems	657
D. Olefin-Brønsted Acid Systems	658
a. Arylethylenes	659
b. Propylene and methylacetylene	662
c. Isobutylene	662
d. Cyclohexadienes	663
IV. Acyl Halides	665
1. Acyl Halide-Lewis Acid Halide Complexes	665
A. Aluminum Halides	665
B. Gallium Halides	668
C. Boron Halides	668
D. Titanium Halides	673
E. Antimony Halides	675
F. Phosphorus and Arsenic Halides	678

G. Ferric Halides	680
H. Miscellaneous Halides	680
2. Acyl Halide-Brønsted Acid Complexes	680
V. Nitryl Halides	680
VI. Sulfonyl Halides	681
VII. Acid Anhydrides	681
VIII. Nitrogen Oxides	684
IX. Alcohols and Phenols	685
1. Alcohol-Lewis Acid Halide Complexes	685
A. Aluminum Halides	685
B. Boron Halides	686
C. Miscellaneous Metal Halides	688
2. Alcohol-Brønsted Acid Complexes	688
A. Hydrogen Halides	689
B. Sulfuric Acid	691
C. Nitric, Perchloric, Fluoroboric, and Miscellaneous Acids	693
3. Phenol-Brønsted Acid Complexes	695
X. Ethers	695
1. Ether-Lewis Acid Halide Complexes	695
A. Magnesium Halides	695
B. Other Group II Halides	696
C. Boron Halides	696
D. Aluminum, Gallium, and Thallium Halides	700
E. Tin and Titanium Halides	700
F. Phosphorus, Antimony, and Bismuth Halides	702
G. Miscellaneous Halides	702
2. Ether-Brønsted Acid Complexes	702
3. Ether-Halogen Complexes	703
XI. Aldehydes and Ketones	704
1. Aldehyde-Lewis Acid Halide Complexes	705
2. Ketone-Lewis Acid Halide Complexes	706
3. Brønsted Acid Complexes	708
4. Halogen Complexes	708
XII. Aromatic Hydrocarbons	710
1. Aromatic Hydrocarbon-Lewis Acid Halide Complexes	710
A. Aluminum and Gallium Halides	711
a. Isolation of complexes	711
b. Thermal analyses, molecular weight determina- tions, heats of solution	712
c. Vapor pressure	714
d. Dipole moments, refraction, and polarization	720
e. Spectroscopic investigations	723
B. Titanium Halides	723
C. Antimony Halides	724
D. Miscellaneous Halides	725
2. Aromatic Hydrocarbon-Brønsted Acid Complexes	726
A. Sulfuric Acid	726

B. Hydrogen Fluoride	728
C. Trifluoroacetic Acid and Boron Trifluoride Hydrate	729
D. Hydrogen Bromide	731
3. Aromatic Hydrocarbon—Lewis Acid Halide—Co-catalyst Complexes (Arenonium or Sigma Complexes)	731
A. Aluminum Halide—Hydrogen (Alkyl, Acyl) Halide Complexes	731
a. Isolation of complexes	732
b. Investigation of complex formation in solution	734
c. Heptamethylbenzenonium tetrachloroaluminate	736
B. Boron Trifluoride—Hydrogen (Alkyl, Acyl) Fluoride Complexes	737
a. Complex formation in solution	737
b. Isolation and preparation of arenonium tetrafluoroborates	740
C. Antimony and Phosphorus Pentafluoride—Hydrogen Fluoride Complexes	743
D. Miscellaneous Metal Fluoride—Hydrogen Fluoride Complexes	743
E. Oxygen-, Nitrogen-, and Sulfur-containing Aromatics	743
F. Halogen-containing Aromatics	744
G. Structural Investigation of Arenonium Complexes	744
a. Electric conductivity	744
b. Ultraviolet spectra	746
c. Nuclear magnetic resonance investigations	748
H. Chemical Reactivity of Benzenonium Complexes	752
a. Reactions due to conjugate acid nature of complexes	752
b. Diels-Alder reaction	753

IX. Spectroscopic Investigations VIBRATIONAL SPECTRA *by Denys*

<i>Cook</i>	767
I. Introduction	767
II. Nitration Systems	769
1. The Nitronium Ion	769
2. Dinitrogen Pentoxide	770
3. Solutions containing the Nitronium Ion	773
4. $\text{HNO}_3\text{--H}_2\text{SO}_4$ Mixtures	774
5. $\text{HNO}_3\text{--HClO}_4$ Mixtures	776
6. $\text{HNO}_3\text{--H}_2\text{SeO}_4$ Mixtures	777
7. Solutions of N_2O_5 in HNO_3	778
8. Solutions of N_2O_5 in H_2SO_4	779
9. Solutions of N_2O_4 in H_2SO_4	779
10. Solutions of SO_3 in HNO_3	780
11. Solutions of BF_3 in HNO_3	783
12. Crystalline Nitronium Salts	785

III. Acylation Systems	790
1. Oxocarbonium Ions	790
2. The $\text{CH}_3\text{COF}-\text{BF}_3$ System	791
3. The $\text{CH}_3\text{COCl}-\text{AlCl}_3$ System	792
4. The Mesityl Chloride- AlCl_3 and $-\text{TiCl}_4$ Systems	795
5. The 2,6-Dimethylbenzoyl Chloride- AlCl_3 and $-\text{TiCl}_4$ Systems	797
6. The 2-Methylbenzoyl Chloride- AlCl_3 and $-\text{TiCl}_4$ Systems	798
7. The Benzoyl Halide-Lewis Acid Systems.	799
8. The Acetyl Halide-Antimony Pentahalide Systems	802
9. The $\text{CH}_3\text{COCl}-\text{TiCl}_4$ System	803
10. The $\text{CH}_3\text{COCl}-\text{GaCl}_3$ System	806
11. An Assessment	806
IV. Appendix	812
 X. Application of Isotopic Tracers to the Study of Reactions	
by <i>R. M. Roberts and G. J. Fonken</i>	821
I. Introduction	821
II. Acylation	821
III. Alkylation	822
IV. Reactions of Alkylbenzenes in the Presence of Friedel-Crafts Catalysts	828
1. Classification of Reactions	828
2. Rearrangements	829
A. Ethylbenzene	830
B. <i>n</i> -Propylbenzene	831
C. <i>n</i> -Butylbenzene	835
D. <i>s</i> -Butylbenzene and Isobutylbenzene	835
E. Pentylbenzenes	837
F. Relationship between Structure and Internal Rearrangement of Alkylbenzenes	839
G. Cyclopentylmethyl- and Cyclohexylbenzene	842
3. Dealkylations	844
4. Fragmentation of the Alkyl Group of Alkylbenzenes in the Presence of Friedel-Crafts Catalysts	846
 XI. Reactivity and Selectivity by <i>George A. Olah</i>	853
I. Comparison of Activity of Lewis Acid Catalysts	853
1. Empirical Sequences of Catalyst Activity	854
A. Racemization of α -Phenylethyl Chloride	854
B. Aromatic Ketone Synthesis	854
C. Gatterman-Koch Reaction	855
D. Alkylation of Aromatics	855
E. Isomerization and Disproportionation.	855
F. Polymerization	856
G. Color Change of Hammett Indicators	856
H. Ionization of Triarylmethyl Halides	857
I. Infra-red Stretching Frequency of Carbonyl Complexes	857

J. Ring Deuteration of Aromatics	858
K. Suggested General Empirical Sequence	858
2. Factors Influencing Catalyst Reactivities	859
A. Limitations of Unique Sequence of Reactivity	859
B. Acid Strength of Acidic Halide Catalysts	861
a. Boron trihalides	861
b. Aluminum trihalides	866
c. Gallium trihalides	868
d. Titanium and zirconium tetrahalides	868
C. Reagent Reactivity (Base Strength)	868
D. Bond Lengths and Strengths in Donor-Acceptor Complexes	870
E. Steric Hindrance	871
F. Physical State of Catalyst	871
a. Lattice and solvation energy	871
b. Heat of dissociation of dimeric and associated catalysts	872
3. Effect of Co-catalysts on Catalytic Activity	873
A. Nature of Co-catalysts	874
a. Proton-releasing substances, especially hy- droxy compounds and hydrogen acids	874
b. Carbonium-ion forming substances	874
B. Activity of Co-catalysts	874
II. Catalyst Activity of Proton Acid Catalysts	876
1. Acid Strength of Proton Acids Based on Hammett's Acidity Function	877
A. Definition of H_0	877
B. H_0 Values in Aqueous and Organic Solutions	878
C. Acidity of Conjugate Friedel-Crafts Acids	879
III. Selectivity in Friedel-Crafts Systems	881
1. Functional Selectivity of Reagents	881
A. Di- and Polyhalides	882
a. Dihaloalkanes	882
b. Haloacyl halides	885
c. Dibasic acid halides	888
d. Halosulfonylacyl halides	890
B. Unsaturated Halides	891
a. Alkenyl halides	891
b. Alkynyl halides	895
c. Alkenoyl halides	895
d. Aralkenoyl halides	896
e. Unsaturated dicarboxylic acid chlorides	897
f. Unsaturated sulfonyl halides	898
C. Functional Carboxylic Acids	898
a. Unsaturated carboxylic acids	898
b. Hydroxy acids	899
c. Halogenated acids	900
D. Functional Alcohols	900
a. Halohydrins	900

b. Unsaturated alcohols	902
c. Diols.	903
E. Functional Substituted Aromatics	903
a. Aralkenes	903
b. Haloaralkanes	904
2. Substrate and Positional Selectivity of Aromatics	905
A. Correlation of Isomer Distribution and Substrate Reactivity	906
B. Linear Free Energy Selectivity Relationship and its Application	907
a. Relationship between activity and <i>meta</i> -substitution	907
b. Selectivity Factor	910
c. Calculation of partial rate factors from the Selectivity Factor	910
d. Correlation of selectivity relationship with Hammett equation	915
C. Limitations of the Linear Correlation of Reagent Activity and Substrate Selectivity	918
a. General considerations	918
b. Necessity of kinetically controlled, non-isomerizing conditions for evaluation of isomer distributions	919
c. Low substrate, high positional selectivity reactions	919
d. Considerations of σ - versus π -complex nature of transition states	920
XII. Thermodynamic Aspects by Daniel R. Stull	937
I. Molecular Energy and its Relation to Chemical Reactions	937
1. The Nature of Heat and its Association with Energy	937
2. The Behavior of a Molecule as it Absorbs Heat	938
3. Molecular Reactivity Depends upon Heat Quantities	940
4. The Gibbs Energy as an Index to the Equilibrium Constant of a Chemical Reaction	941
II. Sources of Heat Data	942
1. Published Compilations	942
2. Methods of Measuring Heat Quantities	943
3. Methods of Calculating Heat Quantities	944
4. Measurement of Enthalpies of Reaction	945
5. Purity of the Sample and its Importance	946
III. Use of Heat Data to Calculate Reaction Equilibria	947
1. Calculation of Enthalpy and Entropy for the Three States of Matter	947
2. Calculation of Gas-phase Thermodynamic Functions	948
3. Change of Thermodynamic Functions accompanying a Chemical Reaction	950
4. Relationship of Equilibrium Constant to Molar Fraction	951
