

Contents—Volume III

PART 1

Editor's Preface to Volume I	vii
Editor's Note to Volume III	x
XXXI. Aromatic Ketone Synthesis <i>by Peter H. Gore</i>	1
I. Introduction	1
II. General Features of the Friedel-Crafts Ketone Synthesis	2
1. Mechanism	2
2. The Influence of the Ratio of Reactants and Sequences of Addition on the Products.	3
3. Solvent	4
4. Abnormal Substitution in Polycyclic Systems	5
III. Catalysts	8
1. Aluminum Chloride	8
A. Effect of Purity	8
B. Side Effects	9
2. Other Metal Halides	9
3. Metals	10
4. Acids, Acid Anhydrides, and Salts	11
5. Other Non-metallic Catalysts	12
6. Optimum Amount of Catalyst and Optimum Contact Time	13
IV. Acyl Components	16
1. General	16
2. Acid Halides	17
A. Relative Reactivities	17
B. Fatty Acid Halides	17
C. Unsaturated Fatty Acid Halides	18
D. Halo-substituted Fatty Acid Halides	20
E. Fatty Acid Halides with Hetero-substituents	22
F. Aryl-substituted Saturated and Unsaturated Fatty Acid Halides	23
G. Carbonyl and Oxalyl Halides	26
H. Malonyl and Higher Dicarboxylic Acid Halides	27
I. Unsaturated Dicarboxylic Acid Halides	29
J. Benzoyl Halides and Derivatives	29
K. Bicyclic, Polycyclic, and Heterocyclic Acyl Halides	31
3. Anhydrides	32
4. Acids	34
5. Esters and Lactones	34
6. Ketenes	35
7. Silanes, Boranes, and Germanes	36
V. Substrates	36
1. Benzenoid Compounds	36
A. Benzene	36

B.	Toluene	36
C.	Monoalkylbenzenes	37
D.	Dialkylbenzenes	38
a.	Xylenes	38
b.	Higher dialkylbenzenes	39
c.	Indane and tetralin	40
E.	Polymethylbenzenes and Higher Alkylbenzenes	41
F.	Diphenylalkanes, etc.	43
G.	Alkylbenzene Derivatives with Side-chain	
	Hetero-substituents	44
H.	Halobenzenes	44
I.	Haloalkylbenzenes	45
J.	Polyhalobenzenes	46
K.	Phenols	46
L.	Ethers of Phenol	48
M.	Ethers of Monohydric Phenols	49
N.	Haloaromatic Ethers	50
O.	Ethers of Polyhydric Phenols	51
P.	Diphenyl Ethers	54
Q.	Thioethers, Thiols, etc..	55
R.	Amines and <i>N</i> -Acylamines	57
S.	Nitro Compounds	58
T.	Silicon Derivatives	59
U.	Selenium Derivatives	59
V.	Arsenic Derivatives	60
W.	Benzoic Acid Derivatives	60
X.	Ketones	61
Y.	Biphenyls and Fluorene	62
Z.	Polyphenyls	63
AA.	Intermolecular Self-acylations	63
2.	Polycyclic Compounds	64
A.	Naphthalenes	64
a.	Naphthalene	64
b.	Alkylnaphthalenes	67
c.	Halonaphthalenes	70
d.	Naphthols	71
e.	Naphthol ethers	72
f.	Other naphthalene derivatives.	73
B.	Anthracene	75
C.	Phenanthrene	76
D.	Pyrene	78
E.	Chrysene	78
F.	Other Polycyclic Aromatic Systems	79
a.	Benz[<i>a</i>]anthracene	79
b.	Triphenylene	79
c.	7 <i>H</i> -Benz[<i>de</i>]anthracene	80
d.	Benzo[<i>c</i>]phenanthrene	80
e.	Benzo[<i>a</i>]pyrene	80
f.	Naphtho[1,2,3,4- <i>def</i>]chrysene	81
g.	Perylene	81

h. Fluoranthene	82
i. Indeno[2,1- <i>a</i>]phenalene	82
j. Biphenylene	82
3. Heterocyclic Compounds	82
A. Furan	82
B. Benzofuran	83
C. Naphthofuran	84
D. Dibenzofuran	84
E. Dihydrobenzofuran and Dihydronaphthofuran	85
F. Pyrone	85
G. Chroman Derivatives	86
H. Xanthene Derivatives	87
I. 1,3-Benzodioxole	87
J. Dibenzo- <i>p</i> -dioxin	87
K. Thiophene	88
L. Benzo[<i>b</i>]thiophene	89
M. Dibenzothiophene	90
N. Various Sulfur Heterocycles	90
a. 2,3,4,5-Tetrahydro-1-benzothiepin	90
b. Thienothiophenes	90
c. Cyclopenta[<i>c</i>]thiapyran	91
d. 1,4-Benzodithiin	91
e. Thianthrene	91
O. Selenium Heterocycles	91
a. Selenophene	91
b. Benzo[<i>b</i>]selenophene	92
c. Dibenzoselenophene	92
P. Pyrrole	92
Q. Indoles	93
R. Carbazoles	94
S. Various Nitrogen Heterocycles	95
a. Indolizine	95
b. Imidazo[1,5- <i>a</i>]pyridine	95
c. Cycl[3.2.2]azine	96
d. Pyrazoles	96
e. Imidazole derivatives	96
f. Pyrimidine	96
T. Pyridines	97
U. Quinoline	97
V. Acridine Derivatives	97
W. Thiazole	98
X. Thienopyrrole	98
Y. Phenazine, Phenoxathiin, Phenoxazine	98
Z. Phenothiazines	99
AA. Borazarophenanthrene	99
BB. 1,2-Benzisoxazole	100
VI. Tables of Acylations	100
Formulae Referred to in Tables VII–CX	101

XXXII. Houben-Hoesch and Related Syntheses by Walter Ruske .	383
I. Introduction: Definition of the Houben-Hoesch Reaction .	383
II. The Controversy between Houben and Hoesch regarding the Discovery of the Reaction	384
III. Reaction Mechanism	387
IV. Structural Factors of the Components Determining the Reaction Mechanism	391
1. The Aromatic Compound	391
2. The Nitrile	393
V. The Normal Houben-Hoesch Reaction	401
1. Carbocyclic Aromatic Compounds	403
A. Normal Nitriles	403
B. Dinitriles	411
C. α -Hydroxynitriles	414
D. α -Halogenonitriles	416
E. α -Aminonitriles	419
F. α -Oxonitriles (Acyl Cyanides)	419
2. Heterocyclic Aromatic Compounds	421
A. Pyrroles	422
B. Indoles	422
C. Coumarones	424
D. Thiophenes	424
E. γ -Pyrones	424
VI. The Abnormal Houben-Hoesch Reaction	425
VII. Related Reactions	428
1. With Cyanogen Halides	428
2. With Thiocyanates	430
3. With Isothiocyanates	431
4. With Thiocyanogen	431
5. With Cyanic Acid	432
6. With Isocyanates	432
7. With Fulminic Acid	433
8. Reactions between Nitriles and Olefins	433
XXXIII. The Fries Reaction by A. Gerecs	499
I. Introduction	499
II. Catalysts	500
III. Techniques	501
IV. Scope	501
V. Mechanism	502
1. Earlier Conceptions	502
2. The " <i>para</i> -Rearrangement"	504
3. The " <i>ortho</i> -Rearrangement"	506
4. The Inter- and Intramolecular Reactions as Com- petitive Processes in the Fries Rearrangement.	507
VI. Tables	511

XXXIV. Acylation with Di- and Polycarboxylic Acid Derivatives

<i>by Andrew G. Peto</i>	535
I. Introduction	535
II. Theoretical Background	536
1. Anhydrides	536
2. Acids	539
3. Ester Acid Chlorides	539
4. Acid Chlorides	541
III. Experimental Considerations	543
1. Condensing Agents (Catalysts)	543
2. Solvents	546
3. Some Other Factors	549
IV. Reactions of Anhydrides	550
1. Succinic, Glutaric, and Phthalic Anhydrides	550
A. Reactions with Alkyl- and Aryl-substituted Benzenes	550
B. Reactions with Fused Polycyclic Compounds	552
C. Reactions with Aromatic Ethers	556
a. Phenyl alkyl ethers	556
b. Phenylene dialkyl ethers	556
c. Ethers of biphenyl and related compounds	557
d. Ethers of polycyclic compounds	558
e. Diphenyl ethers	559
f. Sulfides	560
D. Reactions with Phenols	560
E. Reactions with Halogen Compounds	565
F. Reactions with Carbonyl Compounds	567
G. Reactions with Amines, Amides, Cyano and Nitro Compounds	568
H. Reactions with Heterocyclic Compounds	570
a. Oxygen, sulfur, and selenium compounds	570
b. Nitrogen compounds	572
c. Mixed heterocyclic compounds	573
2. Reactions of Substituted Succinic Anhydrides	573
3. Substituted Glutaric Anhydrides and Related Compounds	577
A. Camphoric and Other Anhydrides containing a Tertiary Alkyl Carbonyl Group	577
B. Glutaconic Anhydride	579
4. Maleic Anhydride	579
A. Reactions with Alkylbenzenes	579
B. Reactions with Polycyclic Hydrocarbons	580
C. Reactions with Phenyl Ethers	581
D. Reactions with Phenols	583
5. Substituted Maleic Anhydrides	583
6. Polymeric Anhydrides	585
7. Aliphatic Tricarboxylic Acid Anhydrides	586
8. Substituted Phthalic Anhydrides	587

A.	3-Substituted Phthalic Anhydrides	587
B.	4-Substituted Phthalic Anhydrides	589
C.	Disubstituted Phthalic Anhydrides	590
a.	3,4- and 3,5-Disubstituted anhydrides	590
b.	3,6-Disubstituted anhydrides	590
c.	4,5-Disubstituted anhydrides	591
D.	Tetrasubstituted Phthalic Anhydrides	591
9.	Anhydrides of Benzenepolycarboxylic Acids	592
10.	Homophthalic Anhydride and Phthalonic Anhydride	593
11.	Anhydrides of Biphenyl Dicarboxylic Acids	594
A.	Biphenic Anhydride	594
B.	Other Anhydrides	595
12.	Anhydrides of Fused Polycyclic Compounds	595
A.	Naphthalendicarboxylic Acid Anhydrides	595
B.	Anthracene and Anthraquinone Di- and Polycarboxylic Acid Anhydrides	596
13.	Anhydrides of Heterocyclic Dicarboxylic Acids	597
A.	Anhydrides of Nitrogen Compounds	597
B.	Anhydrides of Sulfur Compounds	597
14.	Diels-Alder Adducts	598
V.	Di- and Polycarboxylic Acids.	598
1.	Aliphatic Acids	599
2.	Aromatic and Heterocyclic Carboxylic Acids	600
3.	Carboxylic Acid Esters	600
VI.	Ester Acid Chlorides	600
1.	Alkyl Chloroglyoxylates (Oxalic Ester Chlorides)	600
2.	Other Aliphatic Ester Acid Chlorides	602
3.	Aromatic and Heterocyclic Ester Acid Chlorides	603
4.	Some Substituted Ester Acid Chlorides.	604
5.	General Aspects	607
VII.	Acid Chlorides	608
1.	Oxalyl Chloride	608
2.	Malonyl Chloride	611
3.	Succinoyl and Higher Aliphatic Dicarboxylic Acid Chlorides	612
4.	Unsaturated Aliphatic Dicarboxylic Acid Chlorides.	613
5.	Phthaloyl Halides	614
6.	Isophthaloyl Chloride and Terephthaloyl Chloride	617
7.	Biphenyl Dicarboxylic Acid Chloride	617
8.	Fused Polycyclic Carboxylic Acid Chlorides	618
A.	Naphthalene-1,8-Dicarbonyl Chlorides	618
B.	Anthracene Derivatives	619
C.	Anthraquinone Di- and Polycarbonyl Chlorides	619
9.	Heterocyclic Dicarboxylic Acid Chlorides	621
VIII.	Silicic Anhydrides	621
IX.	Derivatives of <i>o</i> -Sulfobenzoic Acid	623
X.	Postscript on the Importance of the Reactions Discussed	623

XI. Appendix	624
1. Introduction to the Tables	624

PART 2

XXXV. Cycliacylation by <i>Suresh Sethna</i>	911
I. Introduction	911
II. Intramolecular Acylation	911
1. Cyclization of Arylaliphatic Acids	911
2. Cyclization of Aryl- and Aralkylaliphatic Dibasic Acids	929
3. Cyclization of Aryloxyaliphatic Acids	935
4. Cyclization of Aryl- or Aralkylcycloalkyl Acids	936
5. Cyclization of Arylcarboxylic Acids with an <i>o</i> -Aryl, <i>o</i> -Aralkyl, or <i>o</i> -Aroyl Substituent	938
6. Cyclization of Anhydrides	944
7. Cyclization with Silver Perchlorate	946
8. Intramolecular Acylation of Nitrogen-containing Compounds	948
9. Cyclization of Sulfur Compounds	956
III. Intermolecular Acylation	961
1. Condensation with γ -Lactones	961
2. Condensation with Unsaturated Monobasic Acids	963
3. Condensation with Dibasic Acids	965
A. Condensation with Oxalyl Chloride	965
B. Condensation with Simple and Substituted Malonyl Chlorides	967
C. Condensation with Other Aliphatic Dibasic Acids	969
D. Condensation with the Anhydrides of Aromatic Dibasic Acids	974
4. Miscellaneous Condensations	976
5. Condensation of β -Ketonic Esters with Phenols	978
6. Condensation of Phenols with Nitriles and Intramolecular Condensation of Nitriles	985
XXXVI. Mechanism of Acylations by <i>Frederick R. Jensen and Gordon Goldman</i>	1003
I. Introduction	1003
II. The Addition Complexes	1004
III. Kinetics of Aluminum Halide Catalyzed Benzoylation Reactions	1012
IV. Mechanisms of Aluminum Halide Catalyzed Benzoylation Reactions	1014
V. Catalysts other than Aluminum Halides	1020
VI. Exchange Studies as Criteria of Mechanism	1022
VII. Other Acylation Studies	1023

VIII.	Acylation of Naphthalene	1024
IX.	Comparison of Acylation and Sulfonylation	1029
X.	Conclusions	1029
XXXVII.	Aliphatic Acylation by C. D. Nenitzescu and A. T. Balaban	1033
I.	Introduction	1033
II.	Acylation of Alkenes and Cycloalkenes	1034
1.	Historical	1034
2.	Scope and Limitations	1036
3.	Reaction Mechanism	1038
4.	Intermolecular Acylation	1042
A.	Reaction Conditions	1042
B.	Acylations with Carboxylic Acid Derivatives	1045
C.	Acylation with Other Reagents	1052
5.	Intramolecular Acylation	1054
6.	Intramolecular Hydride-ion Shifts and Halogen Migrations	1066
7.	Intermolecular Hydride-ion Transfer from Alkanes	1069
III.	Acylation of Alkanes and Cycloalkanes	1071
1.	Historical	1071
2.	Reaction of Alkanes with Acylating Agents	1072
3.	Acylation of Cyclopropane	1077
4.	Side-chain Acylation of Arylalkanes	1079
IV.	Acylation of Alkynes	1081
V.	Reactions with Carbon Monoxide	1084
1.	Historical	1084
2.	Reaction Mechanism	1086
3.	Reaction with Alkanes	1088
4.	Reaction with Alkenes and their Precursors	1089
VI.	Acylation of Carboxylic Acid Derivatives	1093
VII.	Acylation of Ketones	1095
1.	Saturated Ketones	1095
2.	Unsaturated Ketones	1099
3.	Diacylation of Alkenes	1102
4.	Triacylation of Alkenes	1105
	Table I. Intermolecular acylation of olefinic hydro- carbons	1107
	Table II. Intermolecular acylation of functionally substituted alkenes	1129
	Table III. Acylation of alkynes	1132
XXXVIII.	Aldehyde Syntheses by George A. Olah and Stephen J. Kuhn	1153
I.	Introduction	1153
1.	Comparison of Ketone and Aldehyde Syntheses	1153
2.	Available Formylating Agents	1153

II.	Gattermann-Koch Reaction	1154
1.	Scope	1154
2.	Modifications	1158
3.	General Reaction Conditions	1158
4.	Catalysts and Promoters	1159
A.	Role of Catalysts	1159
B.	Activity of Catalysts	1159
C.	Role of Promoters	1160
5.	Solvents	1161
6.	Reagents	1161
7.	Mechanism	1162
A.	Kinetic Considerations	1163
B.	Electrical Conductivity	1164
C.	Thermodynamic Considerations	1166
D.	Role of Intermediate Complexes	1169
E.	Acid-catalyzed Decomposition of Aldehydes	1172
8.	Course of Attempted Reactions with Aliphatic Compounds	1174
III.	Formylation with Formyl Fluoride	1179
1.	Preparation and Properties of Formyl Fluoride	1179
2.	Scope	1183
3.	Catalysts	1184
4.	Mechanism	1185
5.	Formylation of Aliphatics	1187
IV.	Formylation with Formyl Chloride Oxime and Ethoxalyl Chloride	1187
V.	Formylation with Chloromethylene Dibenzoate and Dichloromethyl Alkyl Ethers (Alkyl Dichloroorthoformates)	1189
VI.	Gattermann Synthesis	1191
1.	Scope	1191
2.	Adams Modification (Zinc Cyanide)	1193
A.	Sodium (Potassium) Cyanide	1196
3.	Karrer Modification (Cyanogen Bromide)	1196
4.	General Reaction Conditions	1197
A.	Reagents	1197
B.	Temperature	1198
C.	Solvents	1198
5.	Mechanism	1199
6.	Attempted Application to Aliphatic Compounds	1206
7.	Table of Compounds	1206
VII.	Vilsmeier Reaction	1211
1.	Scope	1211
A.	Formylation of Aromatic Compounds	1211
B.	Formylation of Aliphatic Compounds	1214
2.	General Reaction Conditions	1219
A.	Formylating Agents	1219
B.	Solvents	1220
C.	Temperature	1220

D. Condensing Agents	1220
3. Mechanism	1220
A. Formylation of Aromatics	1220
B. Formylation of Olefins	1224
4. Tables of Compounds	1224
VIII. Formylation with Formic Acid, Formates, and Orthoformates	1241
1. Formic Acid	1241
2. Attempted Fries Rearrangement of Arylformates	1241
3. Silicic Formate (Silicoformic Anhydride)	1242
4. Orthoformates	1242
IX. Attempted Formylation with Formic Anhydrides	1243
1. Formic Anhydride and Mixed Carboxylic Acid-Formic Anhydrides	1243
2. Carbon Monoxide	1244
X. Conclusions	1245
XXXIX. Acid Syntheses by George A. Olah and Judith A. Olah	1257
I. Introduction	1257
II. Carboxylation of Aromatic Compounds	1257
1. Halocarbonylation with Carbonyl Halides	1257
2. Halocarbonylation with Oxalyl Halides	1259
A. Scope	1259
B. Mechanism	1260
3. Carboxyamidation with Carbamyl Chlorides (Gattermann Amide Synthesis)	1262
A. Scope	1262
B. Hopff Modification	1265
C. Amide Hydrolysis (Bouveault Method)	1267
4. Carboxyamidation with Isocyanates	1268
5. Carboxyamidation with Cyanic Acid (Cyanates) and Hydrogen Chloride	1268
6. Carboxylation with Carbon Dioxide	1269
7. Miscellaneous Syntheses	1271
A. Alkyl and Aryl Haloformates	1271
B. Cyanogen and Cyanuryl Halides	1271
C. Trichloroacetoneitrile	1271
D. Lactones	1272
E. Catecholcarbonate Dichloride	1272
III. Carboxylation of Aliphatic Compounds	1272
1. Alkenes (Cycloalkenes)	1272
A. High-pressure Synthesis with Carbon Monoxide and Steam	1272
B. Low-pressure Synthesis with Carbon Monoxide and Steam	1277
C. Atmospheric Synthesis with Formic Acid (Koch Synthesis)	1284
D. Phosgene and Oxalyl Halides	1288

2. Alcohols	1290
3. Ethers	1296
4. Ketones	1297

a. Proton acid catalysts	1424
b. Lewis acid catalysts	1425
VII. Nitronium Salts	1427
1. Preparation	1427
2. Properties	1430
A. Thermal Stability	1430
B. Electrical Conductivity	1431
C. Cryoscopic Measurements	1432
D. Spectroscopic Investigations	1433
3. Solvents	1433
4. Nitration of Aromatics	1434
A. Nitronium Perchlorate	1434
B. Nitronium Tetrafluoroborate	1434
5. Nitration of Heterocyclic Compounds	1438
6. Nitration of Aliphatic Compounds	1438
A. Alkanes and Alkenes	1438
B. Alcohols	1440
C. Amines	1440

VIII. Mechanism of the Nitration of Aromatics	1441
1. The Conception of NO_2^+ as the Actual Nitrating Agent in Electrophilic Aromatic Nitrations	1441
2. Nitronium Tetrafluoroborate Nitration of Alkyl- benzenes	1444
3. Steric Considerations	1457
A. Effects on Substrate Selectivity	1457
a. Tetramethylene sulfone as solvent	1457
b. Nitromethane as solvent	1458
B. Effects on Positional Selectivity	1459
4. Nitronium Tetrafluoroborate Nitration of Polycyclic Hydrocarbons	1461
5. Nitronium Tetrafluoroborate Nitration of Halo- benzenes	1462
6. Nitronium Tetrafluoroborate Nitration of Nitro- benzene and Benzotrifluoride	1466
7. The Role of Intermediate Complexes in the Mechan- ism of Nitrations	1467
8. The Kinetic Isotope Effect	1472
IX. Comparison of the Nitric Acid and Mixed-acid Nitrations with Nitronium Salt Nitrations	1475
1. Nitration with Nitric Acid in Organic Solvents	1475
2. Nitration with Nitric Acid in Sulfuric Acid	1478
3. Nitration with Mixed Acid in Organic Solvents	1479
4. Infra-red and Raman Spectroscopic Investigations of Nitronium Tetrafluoroborate and of Mixed-acid Solutions in Organic Solvents	1480
5. Conclusions	1483
XLIV. Amination by Peter Kovacic	1493
I. Introduction	1493
II. Hydroxylamines	1493
1. Hydroxylamine- <i>O</i> -sulfonic Acid (HSA)	1493
2. Alkylhydroxylamines	1497
3. Hydroxylammonium Salts	1499
4. <i>N</i> -Benzoyloxypiperidine	1503
5. Others	1503
III. Azides	1503
IV. <i>N</i> -Chloramines	1504
XLV. Perchlorylation by C. E. Inman, R. E. Oesterling and F. L. Scott	1507
I. Introduction	1507
II. Properties of Perchloryl Fluoride	1507
III. Direct Perchlorylation Reactions	1509

IV. Indirect Synthesis of Perchloryl Compounds	1512
V. Properties of the Perchlorylaromatic Compounds	1513
XLVI. Halogenation by Hans P. Braendlin and Earl T. McBee	1517
I. Introduction	1517
II. Halogenation of Aromatic Hydrocarbons.	1518
1. General	1518
2. Halogenation of Benzene and Halobenzenes	1534
3. Halogenation of Alkylbenzenes	1541
4. Halogenation of Phenols, Phenolic Ethers, Anilines, Anilides, and Biphenyls	1546
5. Halogenation of Benzene Carrying Nitro, Carboxyl, Carbonyl, and Haloalkyl Substituents	1547
6. Halogenation of Polynuclear and Non-benzenoid Aromatic Hydrocarbons	1551
7. Special Aromatic Halogenation Agents	1555
8. Aromatic Fluorination	1558
III. Halogenation of Aliphatic Hydrocarbons.	1562
1. Addition of Halogens or Hypohalous Acids to Carbon-Carbon Multiple Bonds	1563
2. Addition of Halogen Acids to Carbon-Carbon Multiple Bonds	1571
3. Special Aliphatic Halogenation Agents	1576
Index	1595
