

## TABLE OF CONTENTS

1.	Robert S. Mulliken: Introductory Remarks	1
<u>Section A Molecular Geometry and Theoretical Stereochemistry</u>		
2.	S.C. Nyburg and G. Theodorakopoulos: Experimental and theoretical studies on the conformational rigidity of thiothiophen and related compounds	9
3.	Daniel Kost and Morton Raban A molecular orbital study on rotation-inversion phenomena in substituted hydroxylamines	20
4.	Klára Ösapay, Pál G. Mezey and Arpad Kucsman: Theoretical conformational analysis of sulphimines of the S-aryl type	34
5.	Fernando Bernardi and Nicolaos Epiotis: A molecular orbital investigation on the conformational preferences of CH <sub>2</sub> X radicals	47
6.	A. Richartz: The positive ions of ethane	64
7.	D.F. McIntosh and I.G. Csizmadia: An ab initio study on the electronic structure and stereochemistry of LiO <sub>4</sub>	74
8.	P. Schuster, H. Lischka and A. Beyer: <u>Ab initio</u> MO studies on hydrogen bonding and ion solvation	89
9.	J. Catalán, E. Canadell and J.I. Fernández-Alonso Theoretical study of the intramolecular hydrogen bond in phenols and anilines	105
10.	M.R. Peterson and I.G. Csizmadia: Saddle points by the X-method	117
11.	P.G. Mezey: Analysis of conformational energy hypersurfaces	127
<u>Section B Reactive Intermediates and Theoretical Reaction Mechanisms</u>		
12.	Min H. Lien, A.C. Hopkinson, M.R. Peterson, K. Yates and I.G. Csizmadia A theoretical study on the stereochemistry of the base catalyzed hydrolytic intermediate of methyl formate	162
13.	M.H. Ang, K. Yates and I.G. Csizmadia: Some aspects of the protonation of HF	182
14.	A.C. Hopkinson: Protonation of small molecules and anions	194

15.	Robert D. Bach, Carl L. Willis and John M. Domagala: MO studies on reactive intermediates	221
16.	A.C. Hopkinson, M.H. Lien, K. Yates and I.G. Csizmadia: A Non-Empirical Molecular Orbital Study of Oxirene and its Valence Tautomers	230
17.	M.A. Robb, R. Eade, I.G. Csizmadia, R.K. Gosavi and O.P. Strausz Non empirical direct open shell SCF calculations on the oxirene molecule and the addition of O(3P) atoms to ethylene.	248
18.	K. Yates: Quantum chemical studies on electrophilic addition	261
19.	Vittorio Lucchini and Giorgio Modena: Theoretical analysis of bridged and open $\beta$ -heterosubsti- tuted vinyl cations as reaction intermediates	268
20.	Valeria M. Csizmadia: Sulfuranes as possible reaction intermediates	280
21.	Stephen A. Glover and André Goosen: Evidence for the reaction of amido radicals via the $\Sigma$ -and $\Pi$ -states	297
22.	V. Forero, J. Bertrán and J. Fernández-Alonso: The solvent effect in nucleophilic substitutions	310
23.	M.-M. Hegyhati: A model study of the enzyme-facilitated hydrolysis of acetylcholine using a charge iterative extended Hückel molecular orbital method	319
24.	J.A. Barltrop and L. Clyne: The stereo-electronic requirements of organic reactions	337
Section C Theoretical Photochemistry and Theoretical Spectroscopy		
25.	N.D. Epiotis and S. Shaik: Qualitative potential energy surfaces for thermal and photochemical reactions	348
26.	John D. Goddard and Imre G. Csizmadia: <u>Ab initio</u> calculations on an excimer model system	370
27.	Julianna A. Altmann, Keith Yates and Peter Yates: A theoretical investigation of the oxacarbene rearrange- ment	378
28.	C. Sandorfy: The photochemical consequences of the Rydberg-valence shell distinction	384

29. J. Casado, J. Peleteiro and M.A. Ríos: 392  
Theoretical interpretation of electronic spectra in naphthoquinone derivatives
30. Pablo J. Bruna: 401  
Comparison between some simple carbonyl and thiocarbonyl compounds using combined ab initio methods
31. D.T. Clark and D. Shuttleworth and W.R. Rodwell and M.F. Guest: 415  
Theoretical assignments of the electronic states of the  $\pi$ -radical cation of ethylene
32. D. Clark 426  
Theoretical and experimental investigations of ground and excited states of hole states
33. D.T. Clark and B.J. Cromarty: 447  
Some theoretical aspects of core ionization in carbocations
34. G. Theodorakopoulos, M.A. Robb and I.G. Csizmadia: 462  
A theoretical study on the molecular ionization potentials of selected sulfur compounds
35. Arvi Rauk, Jose M. Barriol and Tom Ziegler: 467  
A Theoretical study of optical activity and optical transition intensities
36. Michael A. Robb and Simon Chin: 488  
Non-empirical calculation of electron coupled nuclear spin-spin coupling constants
37. R. Ditchfield: 503  
Ab initio molecular orbital studies of nmr chemical shifts

Section D The Electron Pair Concept in Terms of Localized  
Molecular Orbitals and Geminals

---

38. Roy Kari: 517  
A direct determination of the localized molecular orbitals of H<sub>2</sub>O
39. R. Daudel, J.D. Goddard, M.R. Peterson and I.G. Csizmadia: 527  
The 'sizes' of bond and lone pair LMO: Basis set and nuclear change effects
40. Cornelia Kozmutza: 537  
The interdependence of proton affinity and electron density changes
41. E. Kapuy: 546  
A rigorous justification of the electron pair concept in organic chemistry

XIV

42. Ates Tanin: 556  
Electron pairs and geminals

43. Pancraccio Palting: 561  
Effective Hamiltonians in separability theory

Section E Special Topics

44. A. Hardisson, R. Lefebvre, F. Mauricio and S. Velasco: 572  
Some aspects of modern theoretical chemistry

45. Antonio G. Gonzalez: 588  
Natural products -- a challenge for theoretical chemists

46. P.J. Plath: 604  
Degree of Innovation - An information - theoretical  
approach in theoretical organic chemistry

47. A. Mangini: 618  
Closing Remarks
