Foreword to the first edition by Professor Sir David Weatherall, xiii

Preface to the first edition: do you need to read this book? xvii

Preface to the fifth edition, xix

Acknowledgements, xxi

Chapter 1 Why read papers at all? 1

Does 'evidence-based medicine' simply mean 'reading papers in medical journals'? 1

Why do people sometimes groan when you mention evidence-based medicine? 4

Before you start: formulate the problem, 10

References, 13

Chapter 2 Searching the literature, 15

What are you looking for? 16

Levels upon levels of evidence, 17

Synthesised sources: systems, summaries and syntheses, 17

Pre-appraised sources: synopses of systematic reviews and primary studies, 21

Specialised resources, 22

Primary studies – tackling the jungle, 23

One-stop shopping: federated search engines, 24

Asking for help and asking around, 25

Online tutorials for effective searching, 26

References, 26

Chapter 3 Getting your bearings: what is this paper about? 28

- The science of 'trashing' papers, 28
- Three preliminary questions to get your bearings, 30
- Randomised controlled trials, 34
- Cohort studies, 38
- Case-control studies, 39
- Cross-sectional surveys, 40
- Case reports, 40
- The traditional hierarchy of evidence, 41
- A note on ethical considerations, 42
- References, 43

Chapter 4 Assessing methodological quality, 45

- Was the study original? 45
- Whom is the study about? 46
- Was the design of the study sensible? 47
- Was systematic bias avoided or minimised? 49
- Was assessment 'blind'? 53
- Were preliminary statistical questions addressed? 54
- Summing up, 57
- References, 58

Chapter 5 Statistics for the non-statistician, 60

- How can non-statisticians evaluate statistical tests? 60
- Have the authors set the scene correctly? 62
- Paired data, tails and outliers, 68
- Correlation, regression and causation, 70
- Probability and confidence, 72
- The bottom line, 74
- Summary, 76
- References, 76

- Chapter 6** Papers that report trials of drug treatments and other simple interventions, 78
- 'Evidence' and marketing, 78
 - Making decisions about therapy, 80
 - Surrogate endpoints, 81
 - What information to expect in a paper describing a randomised controlled trial: the CONSORT statement, 84
 - Getting worthwhile evidence out of a pharmaceutical representative, 86
 - References, 88
- Chapter 7** Papers that report trials of complex interventions, 90
- Complex interventions, 90
 - Ten questions to ask about a paper describing a complex intervention, 92
 - References, 97
- Chapter 8** Papers that report diagnostic or screening tests, 99
- Ten men in the dock, 99
 - Validating diagnostic tests against a gold standard, 100
 - Ten questions to ask about a paper that claims to validate a diagnostic or screening test, 105
 - Likelihood ratios, 110
 - Clinical prediction rules, 111
 - References, 113
- Chapter 9** Papers that summarise other papers (systematic reviews and meta-analyses), 116
- When is a review systematic? 116
 - Evaluating systematic reviews, 119
 - Meta-analysis for the non-statistician, 124
 - Explaining heterogeneity, 128
 - New approaches to systematic review, 132
 - References, 132

Chapter 10 Papers that tell you what to do (guidelines), 135

The great guidelines debate, 135

How can we help ensure that evidence-based guidelines are followed? 138

Ten questions to ask about a clinical guideline, 141

References, 148

Chapter 11 Papers that tell you what things cost (economic analyses), 150

What is economic analysis? 150

Measuring costs and benefits of health interventions, 151

References, 162

Chapter 12 Papers that go beyond numbers (qualitative research), 164

What is qualitative research? 164

Evaluating papers that describe qualitative research, 168

References, 176

Chapter 13 Papers that report questionnaire research, 178

The rise and rise of questionnaire research, 178

Ten questions to ask about a paper describing a questionnaire study, 179

References, 188

Chapter 14 Papers that report quality improvement case studies, 190

What are quality improvement studies – and how should we research them? 190

Ten questions to ask about a paper describing a quality improvement initiative, 193

References, 200

Chapter 15 Getting evidence into practice, 202

Why are health professionals slow to adopt evidence-based practice? 202

How much avoidable suffering is caused by failing to implement evidence? 204

How can we influence health professionals' behaviour to promote evidence-based practice? 205

What does an 'evidence-based organisation' look like? 210
How can we help organisations develop the appropriate structures, systems
and values to support evidence-based practice? 212
References, 217

Chapter 16 Applying evidence with patients, 221

The patient perspective, 221
PROMs, 223
Shared decision-making, 224
Option grids, 226
n of 1 trials and other individualised approaches, 229
References, 230

Chapter 17 Criticisms of evidence-based medicine, 233

What's wrong with EBM when it's done badly? 233
What's wrong with EBM when it's done well? 235
Why is 'evidence-based policymaking' so hard to achieve? 238
References, 240

Appendix 1 Checklists for finding, appraising and implementing
evidence, 242

Appendix 2 Assessing the effects of an intervention, 252

Index, 253
