<i>Preface</i>	xi
<b>1 Stochastic processes and random fields</b>	<b>1</b>
1.1 Preliminaries	1
Probability spaces and random variables	1
Conditional expectations	4
1.2 Stochastic processes	5
Brownian motions	5
Martingales	6
Markov processes	9
1.3 Ergodic properties of Markov processes	15
Recurrent and transient processes	15
Ergodic properties	21
Ergodic theorems	25
Potential kernels	28
1.4 Random fields	31
Kolmogorov's continuity criterion of random fields	31
Weak convergence of continuous random fields	37
Kolmogorov's tightness criterion	38
<b>2 Continuous semimartingales and stochastic integrals</b>	<b>43</b>
2.1 Preliminaries	43
Localmartingales and semimartingales	43
Local semimartingales	45
2.2 Quadratic variational processes	46
Quadratic variations of continuous semimartingales	46
Joint quadratic variations	52
Continuity of quadratic variations	53
2.3 Stochastic integrals and Itô's formula	56
Itô's integrals and Stratonovich's integrals	56
Orthogonal decomposition of localmartingales	61
Itô's formula	64
Applications of Itô's formula	66
<b>3 Semimartingales with spatial parameters and stochastic integrals</b>	<b>71</b>
3.1 Preliminaries	71
Martingales with spatial parameters	71
Regularity of martingales with respect to spatial parameters	74

3.2	Stochastic integrals based on semimartingales with spatial parameters	79
	Itô integrals: case of martingales	79
	Itô integrals: case of semimartingales	84
	Stratonovich integrals	86
	Time change of stochastic integrals	88
	Case of local semimartingales	90
3.3	Some formulas for stochastic integrals	92
	Generalized Itô's formula	92
	Integral and differential rules for stochastic integrals	94
3.4	Stochastic differential equations	100
	Itô's stochastic differential equation	100
	Existence and uniqueness of the solution	101
	Example	106
	Local solution	107
	Stratonovich's stochastic differential equation	110
	Backward integrals and backward equations	111
<b>4</b>	<b>Stochastic flows</b>	<b>114</b>
4.1	Preliminaries	114
4.2	Brownian flows	119
	$n$ -point motions of Brownian flows	119
	Infinitesimal means and covariances	120
	Forward random infinitesimal generators	128
	Backward random infinitesimal generators	130
4.3	Asymptotic properties of Brownian flows	134
	Measure preserving Brownian flow	134
	Asymptotic behavior of $\varphi_t^{-1}(\Pi)$	140
	Asymptotic behavior of $\varphi_t(\Pi)$	144
4.4	Semimartingale flows	147
	Random infinitesimal generators	147
	Itô's formulas for stochastic flows	151
4.5	Homeomorphic property of solutions of SDE	154
	Construction of stochastic flows	154
	$L^p$ -estimates of solutions	156
	Homeomorphic property	159
4.6	Diffeomorphic property of solutions of SDE	164
	Differentiability of solutions	164
	Diffeomorphic property	173
4.7	Stochastic flows of local diffeomorphisms	176
	Construction of stochastic flows of local diffeomorphisms	176
	Global stochastic flows	180
	Random infinitesimal generators	184
4.8	Stochastic flows on manifolds	185
	Preliminaries	185
	Stochastic differential equations on manifolds	188
	Diffeomorphic property of solutions	192

Random infinitesimal generators	195
Itô's formulas for stochastic flows on manifolds	198
4.9 Itô's formulas for stochastic flows and their applications	201
Itô's formula for $\varphi_{s,t}$ acting on vector fields	201
Itô's formula for $\varphi_{s,t}$ acting on tensor fields	204
Composition and decomposition of the solution	208
Supports of stochastic flows of diffeomorphisms	214
<b>5 Convergence of stochastic flows</b>	<b>218</b>
5.1 Preliminaries	218
5.2 Convergence as diffusions I	221
A convergence theorem	221
Uniform $L^p$ -estimates	223
Semimartingale characterization of the limit measure	225
Proof of Theorem 5.2.1	231
Strong convergence	232
5.3 Convergence as diffusions II	234
Statements of theorems	234
Uniform $L^p$ -estimates	238
Characterization of the limit measure	240
5.4 Convergence as stochastic flows	244
Convergence as $C^j$ -flows	244
Uniform $L^p$ -estimate of stochastic flows	247
Proof of Lemma 5.4.4	250
Convergence as $G^j$ -flows	255
5.5 Extensions of convergence theorems	258
Extensions of convergence theorems as diffusions	258
Extensions of convergence theorems as stochastic flows	261
5.6 Some limit theorems for stochastic differential equations	262
Central limit theorem for stochastic flows. I Mixing case	262
Central limit theorem for stochastic flows. II Markov case	270
5.7 Approximations of stochastic differential equations, supports of stochastic flows	274
Preliminaries	274
A weak approximation theorem	275
Strong approximation theorems	281
Supports of stochastic flows	282
<b>6 Stochastic partial differential equations</b>	<b>286</b>
6.1 First order stochastic partial differential equations	286
Preliminaries	286
Stochastic characteristic system	288
Existence and uniqueness of solutions	291
Quasi-linear and semi-linear equations	294
Linear equations	297
6.2 Second order stochastic partial differential equations	301
Preliminaries	301

	Existence and uniqueness of solutions	304
	Probabilistic representation of solutions	307
	Adjoint equation	310
6.3	Applications to nonlinear filtering theory	315
	Filtering problem	315
	Stochastic partial differential equations for nonlinear filter	318
	Robustness of nonlinear filter	322
	Kalman filter	323
6.4	Limit theorems for stochastic partial differential equations	326
	Statement of theorems	326
	Proof of theorems	329
	<i>Frequently used notation and assumptions</i>	334
	<i>Remarks on references</i>	336
	<i>References</i>	340
	<i>Index</i>	345
