Preface	<i>page</i> xiii
<b>1 Introduction</b>	<b>1</b>
1.1 Introduction to Asymptotics	1
1.1.1 Order Relations	1
1.1.2 Asymptotic Expansions	4
1.1.3 Other Expansions	15
1.2 Biographies of Mellin and Barnes	25
<b>2 Fundamental Results</b>	<b>29</b>
2.1 The Gamma Function $\Gamma(z)$	29
2.1.1 The Asymptotic Expansion of $\Gamma(z)$	29
2.1.2 The Stirling Coefficients	32
2.1.3 Bounds for $\Gamma(z)$	33
2.2 Expansion of Quotients of Gamma Functions	35
2.2.1 Inverse Factorial Expansions	36
2.2.2 A Recursion Formula when $\alpha_r = \beta_r = 1$	40
2.2.3 Examples	44
2.2.4 An Algebraic Method for the Determination of the $A_j$	46
2.2.5 Special Cases	49
2.3 The Asymptotic Expansion of Integral Functions	55
2.3.1 An Example	58
2.4 Convergence of Mellin-Barnes Integrals	63
2.5 Order Estimates for Remainder Integrals	69
2.5.1 An Example	69
2.5.2 Lemmas	71

<b>3</b>	<b>Properties of Mellin Transforms</b>	<b>79</b>
3.1	Basic Properties	79
3.1.1	Definition	79
3.1.2	Translational and Differential Properties	81
3.1.3	The Parseval Formula	82
3.2	Analytic Properties	85
3.3	Inverse Mellin Transforms	89
3.3.1	Integrals Connected with $e^{-z}$	89
3.3.2	Some Standard Integrals	91
3.3.3	Discontinuous Integrals	93
3.3.4	Gamma-Function Integrals	96
3.3.5	Ramanujan-Type Integrals	99
3.3.6	Barnes' Lemmas	103
3.4	Mellin-Barnes Integral Representations	106
3.4.1	The Confluent Hypergeometric Functions	107
3.4.2	The Gauss Hypergeometric Function	110
3.4.3	Some Special Functions	112
<b>4</b>	<b>Applications of Mellin Transforms</b>	<b>117</b>
4.1	Transformation of Series	117
4.1.1	The Mellin Transform Method	117
4.1.2	The Poisson-Jacobi Formula	120
4.2	Examples	122
4.2.1	An Infinite Series	122
4.2.2	A Smoothed Dirichlet Series	125
4.2.3	A Finite Sum	128
4.3	Number-Theoretic Examples	133
4.3.1	A Harmonic Sum	133
4.3.2	Euler's Product	136
4.3.3	Ramanujan's Function	137
4.3.4	Some Other Number-Theoretic Sums	141
4.4	Solution of Differential Equations	146
4.4.1	Potential Problems in Wedge-Shaped Regions	146
4.4.2	Ordinary Differential Equations	149
4.4.3	Inverse Mellin Transform Solutions	152
4.5	Solution of Integral Equations	156
4.5.1	Kernels of the Form $k(xt)$	157
4.5.2	Kernels of the Form $k(x/t)$	160
4.6	Solution of Difference Equations	164
4.6.1	Solution by Mellin Transforms	166
4.6.2	The Hypergeometric Difference Equation	167
4.6.3	Solution of the Inhomogeneous First-Order Equation	172

4.7	Convergent Inverse Factorial Series	174
<b>5</b>	<b>Asymptotic Expansions</b>	<b>179</b>
5.1	Algebraic Asymptotic Expansions	179
5.1.1	The Exponential Integral $E_1(z)$	180
5.1.2	The Parabolic Cylinder Function $D_\nu(z)$	182
5.1.3	A Bessel Function Integral	184
5.1.4	The Mittag-Leffler Function $\mathcal{E}_a(z)$	186
5.2	Remainder Integrals	190
5.2.1	Error Bounds	190
5.2.2	Numerical Evaluation	195
5.3	Saddle-Point Approximation of Integrals	197
5.3.1	An Integral Due to Heading and Whipple	198
5.3.2	The Bessel Function $J_n(nx)$	200
5.3.3	A Gauss Hypergeometric Function	202
5.4	Exponential Asymptotic Expansions	205
5.4.1	The Exponential Integral $E_1(z)$	206
5.4.2	The Bessel Function $J_\nu(z)$	208
5.4.3	The Parabolic Cylinder Function $D_\nu(z)$	210
5.4.4	An Infinite Sum	213
5.5	Faxén's Integral	216
5.6	Integrals with a 'Contour Barrier'	220
5.6.1	An Illustrative Example	221
5.6.2	An Integral Involving a Bessel Function	225
5.6.3	Example in §4.2.3 Revisited	229
<b>6</b>	<b>The Stokes Phenomenon and Hyperasymptotics</b>	<b>234</b>
6.1	The Stokes Phenomenon	234
6.1.1	A Qualitative Description	234
6.1.2	The Modified Bessel Function $K_\nu(z)$	236
6.2	Mellin-Barnes Theory	240
6.2.1	Exponentially-Improved Expansion	241
6.2.2	Estimates for $ R_{N,M}(z) $	244
6.2.3	The Stokes Multiplier	246
6.2.4	The Stokes Multiplier for a High-Order Differential Equation	249
6.2.5	Numerical Examples	256
6.2.6	Asymptotics of the Terminant $T_\nu(z)$	259
6.3	Hyperasymptotics	265
6.3.1	Mellin-Barnes Theory of Hyperasymptotics	266
6.3.2	Optimal Truncation Schemes	271

6.3.3	A Numerical Example	277
6.4	Exponentially-Improved Asymptotics for $\Gamma(z)$	279
6.4.1	Origin of the Exponentially Small Terms	280
6.4.2	The Expansion of $\Omega(z)$	282
6.4.3	A Numerical Example	286
<b>7</b>	<b>Multiple Mellin-Barnes Integrals</b>	<b>289</b>
7.1	Some Double Integrals	289
7.2	Residues and Double Integrals	295
7.3	Laplace-Type Double Integrals	299
7.3.1	Mellin-Barnes Integral Representation	303
7.3.2	The Newton Diagram	304
7.4	Asymptotics of $I(\lambda)$	305
7.4.1	Two Internal Points	306
7.4.2	Three and More Internal Points	311
7.4.3	Other Double Integrals	322
7.5	Geometric Content	323
7.5.1	Remoteness	324
7.5.2	Asymptotic Scales	326
7.6	Laplace-Type Integrals of Higher Dimension	328
7.6.1	Representation of Treble Integrals	328
7.6.2	Asymptotics with One Internal Point	329
7.6.3	Asymptotics with Two Internal Points	332
7.6.4	Other Considerations for Treble Integrals	339
7.7	Numerical Examples	340
<b>8</b>	<b>Application to Some Special Functions</b>	<b>352</b>
8.1	Asymptotics of the Euler-Jacobi Series	353
8.1.1	Introduction	353
8.1.2	The Saddle Point Approach	356
8.1.3	The Asymptotics of $S_p(a)$	361
8.1.4	Mellin-Barnes Integral Approach	365
8.1.5	The Asymptotic Expansion of $S_p(a)$ for $a \rightarrow 0+$	368
8.1.6	The Coefficients $A_k$	371
8.1.7	The Stokes Phenomenon for $p \simeq 2$	374
8.2	An Asymptotic Formula for $\zeta(\frac{1}{2} + it)$	380
8.2.1	Introduction	380
8.2.2	An Expansion for $\zeta(s)$	382
8.2.3	An Exponentially-Smoothed Gram-Type Expansion	384
8.2.4	A Riemann-Siegel-Type Expansion	385
8.3	The Asymptotics of Pearcey's Integral	389
8.3.1	Introduction	389

8.3.2	A Mellin-Barnes Integral Representation	391
8.3.3	Asymptotics of $\hat{P}(x, y)$ for $ x  \rightarrow \infty$	393
8.3.4	Asymptotics of $\hat{P}(x, y)$ for $ y  \rightarrow \infty$	398
8.3.5	Asymptotics of $P(X, Y)$ for Real $X, Y$	400
8.3.6	Generalisations of $P(X, Y)$	401
	Appendix	404
	References	409
	Index	419
