<i>Bryan Jennett</i>	
1. Brain death	13
2. Diagnosis of brain death: UK criteria	15
3. Validity of the criteria	17
4. Procedure in other countries	18
5. Frequency of brain death and organ donation	19
6. The persistent vegetative state (PVS)	20
3 Consent to treatment and research in the ICU	29
<i>J. K. Mason</i>	
1. The nature of consent	29
2. Non-voluntary treatment	31
3. The conscious and competent adult	37
4. Refusal of treatment	40
5. Consent and withdrawal of treatment	41
6. Research in the ICU	42
4 Withholding and withdrawing medical treatment	47
<i>N. Pace</i>	
1. Introduction	47
2. Ethical principles: sanctity of life	49

3.	Ordinary and extraordinary means	51
4.	Acts and omissions	52
5.	Double effect	55
6.	Legal principles	57
7.	Conclusion	64
5	Advance directives: legal and ethical considerations	68
	<i>Sheila A. M. McLean</i>	
1.	Why make an advance directive?	69
2.	Do advance directives merit respect?	70
3.	The legal view: a comparative analysis	73
4.	The UK position	76
5.	Conclusion	79
6	Outcome scoring in intensive care	84
	<i>Sydney Jacobs</i>	
1.	Introduction	84
2.	Static scoring systems	86
3.	Dynamic scoring systems	97
4.	Conclusion	101
7	Quality of life after intensive care	106
	<i>Michael Heap and Saxon A. Ridley</i>	
1.	Introduction	106
2.	Indices of quality of life measurements	107
3.	Quality of life assessment	111
4.	Decisions and preferences	114
5.	Value of intensive care	117
6.	Conclusion	120
8	Paediatric issues	125
	<i>N. S. Morton</i>	
1.	Neonatal intensive care	125
2.	Resource allocation	127
3.	Consent to treatment	128
4.	Diagnosis of brain death, and organ donation	129
5.	Research	131
9	The nursing perspective	134
	<i>Kath M. Melia</i>	
1.	Justice	135
2.	Beneficence	136
3.	Autonomy	136

4.	Nursing in the ICU	137
5.	Challenges to nursing ethics	138
6.	Conclusion	140
10	Ventilating patients for organ donation	142
	<i>Malcolm G. Booth and Peter G. M. Wallace</i>	
1.	Introduction	142
2.	The Exeter Protocol	143
3.	The case for interventional ventilation	145
4.	The case against interventional ventilation	147
5.	Consent and the patient's best interests	148
6.	Human and ICU resource considerations	150
7.	Persistent vegetative state (PVS)	151
8.	Improving the acceptability of interventional ventilation	152
9.	Conclusion	154
11	Rational resource allocation: management perspectives	158
	<i>Roger Dyson</i>	
1.	Introduction	158
2.	A model for analysing health care demand	158
3.	Macro-level initiatives	161
4.	Micro-level analysis applied to intensive care	162
5.	Mechanisms for access to intensive care	164
6.	Conclusion	166
12	Rational resource allocation: ethical perspectives	167
	<i>Lesley McTurk</i>	
1.	Introduction	167
2.	'Futile' care	168
3.	Resolving difficult choices	172
4.	Competing needs	173
5.	Conclusion	176
13	A theological overview	179
	<i>G. R. Dunstan</i>	
1.	Theology and medical ethics	179
2.	Moral reasoning	181
3.	Nutrition and hydration	181
4.	Should all patients be treated?	185
	Index	189
