Preface

Part 1	Analytic continuation of some zeta functions by Gautami Bhowmik	1
Part 2	Lectures on height zeta functions: At the confluence of algebraic geometry, algebraic number theory, and analysis by Antoine Chambert-Loir	17
Part 3	Spherical functions on p-adic homogeneous spaces by Yumiko Hironaka	50
Part 4	Poly-Bernoulli numbers and related zeta functions by Masanobu Kaneko	73
Part 5	Rankin-Selberg method and periods of modular forms by Hidenori Katsurada	86
Part 6	An introduction to the theory of zeta-functions of root systems by Yasushi Komori, Kohji Matsumoto and Hirofumi Tsumura	115
Part 7	An introduction to p-adic and motivic zeta functions and the monodromy conjecture by Johannes Nicaise	141
Part 8	Hypergeometric constructions of rational approximations for (multiple) zeta values by Tanguy Rivoal	167
