

# Table of contents

<b>Editorial: Key issues for the implementation of the Paris Agreement and the long-term transformation towards low carbon societies</b> .....	<b>6</b>
<b>How to trigger the non-linear transformation towards full decarbonisation?</b> .....	<b>9</b>
What disruptions are looming in the areas of environment, energy and geo-policy? What strategies could counter them? .....	10
Governance levels and scientific paradigms for deep decarbonisation pathways .....	12
Modelling 1.5°C scenarios: scientific challenges and consequences for policymaking .....	15
Germany's Energiewende as a model for change? Problems, disruptions and policies .....	20
Energy transitions in Japan - a historical perspective .....	23
Life cycle thinking for sustainable consumption and production .....	27
Small-scale energy projects in the global south .....	30
The German-Japanese Energy Transition Council - a role model for international cooperation on energy transition? .....	33
<b>How to design economic and climate policy to finance the transition to low carbon economies and respond to today's economic and social challenges?</b> .....	<b>36</b>
Developing new economic instruments .....	38
A new deal for Green Growth? Hedging against the risks of 'secular stagnation' .....	41
Fighting climate systemic risk: from carbon pricing to monetary instruments .....	45
Financing urban climate action: is the issue really creditworthiness? .....	48
Climate-related development finance and the Paris Agreement - challenges and opportunities for the work of the OECD Development Assistance Committee .....	51
<b>How to motivate cities to pursue low carbon and sustainable development?</b> .....	<b>54</b>
Visions for post-carbon cities .....	56
The triple dividend of urban resilience transition .....	61
InnovationCity Ruhr as an example of a transformative approach .....	65
Improving land use to make cities low carbon and climate-resilient: the Silang-Sta. Rosa subwatershed, the Philippines .....	69
<b>Deep decarbonisation – the role of industries</b> .....	<b>74</b>
Industries and companies as non-state actors? .....	76
Decarbonising Europe's energy-intensive industries .....	79
Rethinking basic materials production .....	83
Enabling CO <sub>2</sub> reuse value chains: the importance of geographical conditions .....	86
Deep decarbonisation in industries: what does it mean for India? .....	88
<b>Science in the context of the SDGs and climate policy after Paris</b> .....	<b>92</b>
Science, technology and innovation as means of attaining the Sustainable Development Goals .....	94
The role of the IPCC in achieving the climate targets and the Sustainable Development Goals .....	97
<b>Imprint</b> .....	<b>99</b>
