
CONTENTS

PART 1 PROBLEMS, Page 1.

1 DERIVATION OF EQUATIONS AND FORMULATION OF PROBLEMS, Page 3.

1. Mechanics, 3.
2. Heat Conduction, 9.
3. Electricity and Magnetism, 11.

2 SOME SPECIAL METHODS FOR SOLVING HYPERBOLIC AND ELLIPTIC EQUATIONS, Page 19.

1. Hyperbolic Equations, 19.
2. Elliptic Equations: The Green's Function Method, 27.
3. Elliptic Equations: The Method of Conformal Mapping, 33.

3 STEADY-STATE HARMONIC OSCILLATIONS, Page 42.

1. Elastic Bodies: Free Oscillations, 43.
2. Elastic Bodies: Forced Oscillations, 46.
3. Electromagnetic Oscillations, 49.

4 THE FOURIER METHOD, Page 55.

1. Mechanics: Vibrating Systems, Acoustics, 60.
2. Mechanics: Statics of Deformable Media, Fluid Dynamics, 73.

- 4 THE FOURIER METHOD—Continued
3. Heat Conduction: Nonstationary Problems, 77.
 4. Heat Conduction: Stationary Problems, 83.
 5. Electricity and Magnetism, 91.
- 5 THE EIGENFUNCTION METHOD FOR SOLVING INHOMOGENEOUS PROBLEMS, Page 103.
1. Mechanics: Vibrating Systems, 107.
 2. Mechanics: Statics of Deformable Media, 114.
 3. Heat Conduction: Nonstationary Problems, 119.
 4. Heat Conduction: Stationary Problems, 124.
 5. Electricity and Magnetism, 131.
- 6 INTEGRAL TRANSFORMS, Page 143.
1. The Fourier Transform, 146.
 2. The Hankel Transform, 160.
 3. The Laplace Transform, 169.
 4. The Mellin Transform, 189.
 5. Integral Transforms Involving Cylinder Functions of Imaginary Order, 194.
- 7 CURVILINEAR COORDINATES, Page 203.
1. Elliptic Coordinates, 204.
 2. Parabolic Coordinates, 210.
 3. Two-Dimensional Bipolar Coordinates, 212.
 4. Spheroidal Coordinates, 219.
 5. Paraboloidal Coordinates, 231.
 6. Toroidal Coordinates, 233.
 7. Three-Dimensional Bipolar Coordinates, 242.
 8. Some General Problems on Separation of Variables, 247.
- 8 INTEGRAL EQUATIONS, Page 253.
1. Diffraction Theory, 254.
 2. Electrostatics, 259.

PART 2 SOLUTIONS, Page 273.

MATHEMATICAL APPENDIX, Page 381.

1. Special Functions Appearing in the Text, 381.
2. Expansions in Series of Orthogonal Functions, 384.
3. Some Definite Integrals Frequently Encountered in the Applications, 386.
4. Expansion of Some Differential Operators in Orthogonal Curvilinear Coordinates, 388.

Supplement. VARIATIONAL AND RELATED METHODS, Page 391.

1. Variational Methods, 392.
 - 1.1. Formulation of Variational Problems, 392.
 - 1.2. The Ritz Method, 396.
 - 1.3. Kantorovich's Method, 401.
2. Related Methods, 404.
 - 2.1. Galerkin's Method, 404.
 - 2.2. Collocation, 407.
 - 2.3. Least Squares, 411.
3. References, 412.

BIBLIOGRAPHY, Page 415.
