Series Preface	xiii
Preface	xv
Acknowledgments	xix
List of Symbols	xxi
List of Examples	xxix
1 Mechanics of Orthotropic Materials	1
1.1 Lamina Coordinate System	1
1.2 Displacements	1
1.3 Strain	2
1.4 Stress	3
1.5 Contracted Notation	4
1.5.1 Alternate Contracted Notation	5
1.6 Equilibrium and Virtual Work	6
1.7 Boundary Conditions	8
1.7.1 Traction Boundary Conditions	8
1.7.2 Free Surface Boundary Conditions	8
1.8 Continuity Conditions	8
1.8.1 Traction Continuity	8
1.8.2 Displacement Continuity	9
1.9 Compatibility	9
1.10 Coordinate Transformations	10
1.10.1 Stress Transformation	12
1.10.2 Strain Transformation	14
1.11 Transformation of Constitutive Equations	15
1.12 3D Constitutive Equations	17
1.12.1 Anisotropic Material	18
1.12.2 Monoclinic Material	19
1.12.3 Orthotropic Material	20
1.12.4 Transversely Isotropic Material	21
1.12.5 Isotropic Material	23

1.13	Engineering Constants	24
1.13.1	Restrictions on Engineering Constants	27
1.14	From 3D to Plane Stress Equations	29
1.15	Apparent Laminate Properties	30
	Suggested Problems	32
2	Introduction to Finite Element Analysis	35
2.1	Basic FEM Procedure	35
2.1.1	Discretization	36
2.1.2	Element Equations	36
2.1.3	Approximation over an Element	37
2.1.4	Interpolation Functions	38
2.1.5	Element Equations for a Specific Problem	40
2.1.6	Assembly of Element Equations	41
2.1.7	Boundary Conditions	42
2.1.8	Solution of the Equations	42
2.1.9	Solution Inside the Elements	42
2.1.10	Derived Results	43
2.2	General Finite Element Procedure	43
2.3	Solid Modeling, Analysis, and Visualization	46
2.3.1	Model Geometry	47
2.3.2	Material and Section Properties	57
2.3.3	Assembly	61
2.3.4	Solution Steps	63
2.3.5	Loads	63
2.3.6	Boundary Conditions	65
2.3.7	Meshing and Element Type	68
2.3.8	Solution Phase	70
2.3.9	Post-processing and Visualization	73
	Suggested Problems	89
3	Elasticity and Strength of Laminates	91
3.1	Kinematic of Shells	92
3.1.1	First-Order Shear Deformation Theory	93
3.1.2	Kirchhoff Theory	97
3.1.3	Simply Supported Boundary Conditions	99
3.2	Finite Element Analysis of Laminates	100
3.2.1	Element Types and Naming Convention	101
3.2.2	Thin (Kirchhoff) Shell Elements	104
3.2.3	Thick Shell Elements	104
3.2.4	General-purpose (FSDT) Shell Elements	104
3.2.5	Continuum Shell Elements	105
3.2.6	Sandwich Shells	106
3.2.7	Nodes and Curvature	106
3.2.8	Drilling Rotation	106

3.2.9	A, B, D, H Input Data for Laminate FEA	107
3.2.10	Equivalent Orthotropic Input for Laminate FEA	113
3.2.11	LSS for Multidirectional Laminate FEA	119
3.2.12	FEA of Ply Drop-Off Laminates	129
3.2.13	FEA of Sandwich Shells	139
3.2.14	Element Coordinate System	150
3.2.15	Constraints	159
3.3	Failure Criteria	163
3.3.1	2D Failure Criteria	163
3.3.2	3D Failure Criteria	166
3.4	Predefined Fields	171
	Suggested Problems	173
4	Buckling	177
4.1	Eigenvalue Buckling Analysis	177
4.1.1	Imperfection Sensitivity	183
4.1.2	Asymmetric Bifurcation	183
4.1.3	Post-critical Path	184
4.2	Continuation Methods	187
	Suggested Problems	192
5	Free Edge Stresses	195
5.1	Poisson's Mismatch	196
5.1.1	Interlaminar Force	196
5.1.2	Interlaminar Moment	197
5.2	Coefficient of Mutual Influence	204
5.2.1	Interlaminar Stress due to Mutual Influence	207
	Suggested Problems	212
6	Computational Micromechanics	215
6.1	Analytical Homogenization	216
6.1.1	Reuss Model	216
6.1.2	Voigt Model	217
6.1.3	Periodic Microstructure Model	217
6.1.4	Transversely Isotropic Averaging	218
6.2	Numerical Homogenization	220
6.3	Local-Global Analysis	238
6.4	Laminated RVE	241
	Suggested Problems	247
7	Viscoelasticity	249
7.1	Viscoelastic Models	251
7.1.1	Maxwell Model	251
7.1.2	Kelvin Model	252
7.1.3	Standard Linear Solid	253

7.1.4	Maxwell-Kelvin Model	253
7.1.5	Power Law	254
7.1.6	Prony Series	254
7.1.7	Standard Nonlinear Solid	256
7.1.8	Nonlinear Power Law	256
7.2	Boltzmann Superposition	258
7.2.1	Linear Viscoelastic Material	258
7.2.2	Unaging Viscoelastic Material	259
7.3	Correspondence Principle	260
7.4	Frequency Domain	261
7.5	Spectrum Representation	262
7.6	Micromechanics of Viscoelastic Composites	262
7.6.1	One-Dimensional Case	262
7.6.2	Three-Dimensional Case	264
7.7	Macromechanics of Viscoelastic Composites	269
7.7.1	Balanced Symmetric Laminates	269
7.7.2	General Laminates	269
7.8	FEA of Viscoelastic Composites	269
	Suggested Problems	280
8	Continuum Damage Mechanics	283
8.1	One-Dimensional Damage Mechanics	284
8.1.1	Damage Variable	284
8.1.2	Damage Threshold and Activation Function	286
8.1.3	Kinetic Equation	287
8.1.4	Statistical Interpretation of the Kinetic Equation	288
8.1.5	One-Dimensional Random-Strength Model	289
8.1.6	Fiber-Direction, Tension Damage	294
8.1.7	Fiber-Direction, Compression Damage	300
8.2	Multidimensional Damage and Effective Spaces	304
8.3	Thermodynamics Formulation	305
8.3.1	First Law	306
8.3.2	Second Law	307
8.4	Kinetic Law in Three-Dimensional Space	313
8.4.1	Return-Mapping Algorithm	316
8.5	Damage and Plasticity	322
	Suggested Problems	324
9	Discrete Damage Mechanics	327
9.1	Overview	328
9.2	Approximations	332
9.3	Lamina Constitutive Equation	333
9.4	Displacement Field	334
9.4.1	Boundary Conditions for $\Delta T = 0$	335
9.4.2	Boundary Conditions for $\Delta T \neq 0$	336

9.5	Degraded Laminate Stiffness and CTE	337
9.6	Degraded Lamina Stiffness	338
9.7	Fracture Energy	339
9.8	Solution Algorithm	340
9.8.1	Lamina Iterations	340
9.8.2	Laminate Iterations	340
	Suggested Problems	351
10	Delaminations	353
10.1	Cohesive Zone Method	356
10.1.1	Single Mode Cohesive Model	358
10.1.2	Mixed Mode Cohesive Model	361
10.2	Virtual Crack Closure Technique	371
	Suggested Problems	375
A	Tensor Algebra	377
A.1	Principal Directions of Stress and Strain	377
A.2	Tensor Symmetry	377
A.3	Matrix Representation of a Tensor	378
A.4	Double Contraction	379
A.5	Tensor Inversion	379
A.6	Tensor Differentiation	380
A.6.1	Derivative of a Tensor with Respect to Itself	380
A.6.2	Derivative of the Inverse of a Tensor with Respect to the Ten- sor	381
B	Second-Order Diagonal Damage Models	383
B.1	Effective and Damaged Spaces	383
B.2	Thermodynamic Force \mathbf{Y}	384
B.3	Damage Surface	386
B.4	Unrecoverable-Strain Surface	387
C	Software Used	389
C.1	<i>Abaqus</i>	389
C.1.1	<i>Abaqus</i> Programmable Features	391
C.2	BMI3	393
	References	395
	Index	407
