

## TABLE OF CONTENTS

Preface	xi
Acknowledgements	xix
Introduction	xxi
Chapter I	1
§1 Normal domains	1
§2 The causal structure of space-times	8
§3 Vector bundles	20
§4 The wave equations for differential forms in non-euclidean spaces	27
§5 A spinor calculus	64
Chapter II Riesz distributions	105
§1 The Riesz distributions in the Minkowski space	105
§2 The Riesz distributions in curved space-times	119
§3 Some generalizations	140
Chapter III The fundamental solutions	153
§1 The Hadamard coefficients	153
§2 B-series	164
§3 The fundamental solutions	174
§4 Applications of the fundamental solutions	201
§5 The Cauchy problem	213

Chapter IV Huygens' operators	229
§1 Hadamard's criterion	229
§2 Huygens' triples	249
§3 Divisors. General wave families	266
§4 Maxwell's equations. Dirac's equations	281
Chapter V The Euler-Poisson-Darboux equation	303
§1 An application of the method of descent	303
§2 The singular Cauchy problem	316
§3 Huygens' principle for the EPD-equation	342
§4 Stellmacher's equations	355
§5 Elliptic operators with vanishing first Hadamard coefficient	389
Appendix	421
§6 Relations to spectral geometry	434
Chapter VI Transformation theory	459
§1 The bundle connection associated to an operator $P$	459
§2 A property of the Hadamard coefficients	471
§3 Conformal gauge transformations of an operator $P$	479
§4 Tensors with simple transformation law	495
§5 The moments of a normal hyperbolic operator (even dimension)	518
§6 The moments for Maxwell's equations	533
Chapter VII Some theorems on Huygens' operators over four-dimensional space-times	555
§1 Some preparatory transformations	555
§2 The moments of order $\leq 3$	567
§3 Applications to Huygens' operators in a four-dimensional space-time	587
§4 The case of conformally flat metrics	608

## Contents

Chapter VIII	Plane wave manifolds and Huygens' principle	641
§1	Introduction. Results	641
§2	pp- and plane wave manifolds	650
§3	Huygens' principle for plane wave manifolds	670
§4	A characterization of plane wave manifolds	692
§5	Some conformally invariant tensors	718
§6	Testing coefficients by pp-metrics	745
§7	Testing coefficients by metrics of constant curvature	765
Table I	Identities for the Weyl tensor	795
Table II	Moments of order $\leq 4$ in four dimensions	799
Table III	Some formulas for pp-metrics	803
Table IV	Some formulas for plane wave metrics	805
Appendix I	Metric and curvature in normal coordinates	807
Appendix II	Weak Huygens' operators by V. Wunsch	821
Appendix III	Huygens' principle for spin tensor equations by V. Wunsch	825
	Index	831
	Bibliography	833
