INTRODUCTION	xi
NOTATION	xv
I. ADDITION OF SEQUENCES: STUDY OF DENSITY RELATIONSHIPS	
§ 1. Introduction and notation	1
§ 2. Schnirelmann density and Schnirelmann's theorems. Besicovitch's theorem	3
§ 3. Essential components and complementary sequences	9
§ 4. The theorems of Mann, Dyson, and van der Corput	17
§ 5. Bases and non-basic essential components	25
§ 6. Asymptotic analogues and $p$ -adic analogues	43
§ 7. Kneser's theorem	51
§ 8. Kneser's theorem (continued): the $\tau$ -transformations	58
§ 9. Kneser's theorem (continued): proof of Theorem 19—sequence functions associated with the derivations of a system	63
§ 10. Kneser's theorem (continued): proofs of Theorems 16' and 17'	69
§ 11. Hanani's conjecture	75
II. ADDITION OF SEQUENCES: STUDY OF REPRESENTATION FUNCTIONS BY NUMBER THEORETIC METHODS	
§ 1. Introduction	76
§ 2. Auxiliary results from the theory of finite fields	79
§ 3. Sidon's problems	84
§ 4. The Erdős–Fuchs theorem	97
III. ADDITION OF SEQUENCES: STUDY OF REPRESENTATION FUNCTIONS BY PROBABILITY METHODS	
§ 1. Introduction	107
§ 2. Principal results	110
§ 3. Finite probability spaces: informal discussion	114
§ 4. Measure theory: basic definitions	117
§ 5. Measure theory: measures on product spaces	122
§ 6. Measure theory: simple functions	126
§ 7. Probability theory: basic definitions and terminology	129
§ 8. Auxiliary lemmas	130
§ 9. Probability theory: some fundamental theorems	134
§ 10. Probability measures on the space of (positive) integer sequences	141
§ 11. Preparation for the proofs of Theorems 1–4	143

§ 12. Proof of Theorem 1	150
§ 13. Proof of Theorem 2	151
§ 14. Proof of Theorem 3	152
§ 15. Quasi-independence of the variables $r_n$	155
§ 16. Proof of Theorem 4—sequences of pseudo-squares	177
IV. SIEVE METHODS	
§ 1. Introduction	186
§ 2. Notation and preliminaries	198
§ 3. The number of natural numbers not exceeding $x$ not divisible by any prime less than $y$	200
§ 4. The generalized sieve problem	204
§ 5. The Viggo Brun method	206
§ 6. Selberg's upper-bound method: informal discussion	208
§ 7. Selberg's upper-bound method	211
§ 8. Selberg's lower-bound method	214
§ 9. Selberg's lower-bound method: further discussion	217
§ 10. The 'large' sieves of Linnik and Rényi	224
V. PRIMITIVE SEQUENCES AND SETS OF MULTIPLES	
§ 1. Introduction	238
§ 2. Density	240
§ 3. An inequality concerning densities of unions of congruence classes	242
§ 4. Primitive sequences	244
§ 5. The set of multiples of a sequence: applications including the proofs of Theorems 4 and 5	254
§ 6. A necessary and sufficient condition for the set of multiples of a given sequence to possess asymptotic density	262
§ 7. The set of multiples of a special sequence	268
§ 8. Proof of Theorem 15	273
APPENDIX	
§ 1. The Fibonacci sequence $\{f_j\}$	275
§ 2. The distribution of prime numbers	276
§ 3. Mean values of certain arithmetic functions	278
§ 4. Miscellanea from elementary number theory	281
