INTRODUCTION	xi
------------------------	----

Part I. C^* -ALGEBRAS

CHAPTER 1. NORMED INVOLUTIVE ALGEBRAS	3
1.1. Involutive algebras	3
1.2. Normed involutive algebras	6
1.3. C^* -algebras	8
1.4. Commutative C^* -algebras	11
1.5. Functional calculus in C^* -algebras	12
1.6. Positive elements in C^* -algebras	15
1.7. Approximate identities in C^* -algebras	18
1.8. Quotient of a C^* -algebra	20
1.9. Addenda	22
CHAPTER 2. POSITIVE FORMS AND REPRESENTATIONS	26
2.1. Positive forms	26
2.2. Representations	31
2.3. Topologically irreducible representations	34
2.4. Positive forms and representations	37
2.5. Pure forms and irreducible representations	41
2.6. Existence of representations of C^* -algebras	45
2.7. The enveloping C^* -algebra of an involutive Banach algebra	47
2.8. A theorem on transitivity	50
2.9. Ideals in C^* -algebras	54
2.10. Extension of representations of C^* -algebras	58
2.11. Passage to an ideal and to a quotient algebra	60
2.12. Addenda	64

CHAPTER 3. THE SPECTRUM OF A C^* -ALGEBRA	69
3.1. The Jacobson topology	69
3.2. The spectrum of an ideal and of a quotient algebra	72
3.3. Norm and topology	74
3.4. Second definition of the topology on the spectrum	76
3.5. Third definition of the topology on the spectrum	80
3.6. Finite-dimensional representations	84
3.7. More about the spaces $\text{Rep}_n(A)$	86
3.8. The Mackey Borel structure	89
3.9. Addenda	90
CHAPTER 4. LIMINAL C^* -ALGEBRAS	94
4.1. The algebra of compact operators	94
4.2. Liminal C^* -algebras	98
4.3. Postliminal C^* -algebras	99
4.4. The spectrum of a postliminal C^* -algebra	102
4.5. C^* -algebras with continuous trace	104
4.6. Borel structure on the spectrum of a postliminal C^* - algebra	108
4.7. Addenda	109
CHAPTER 5. THE TYPE OF A REPRESENTATION	114
5.1. Comparison of representations and comparison of projections	114
5.2. Disjunction	115
5.3. Quasi-equivalence	118
5.4. Representations of type I	121
5.5. Involutive algebras of type I	126
5.6. Representations of types II and III	127
5.7. Addenda	128
CHAPTER 6. TRACES AND REPRESENTATIONS	131
6.1. Traces	131
6.2. Bitraces	133
6.3. Maximal bitraces	135
6.4. Relations between traces and bitraces	137
6.5. The sum of two traces	139
6.6. Traces and representations	141
6.7. Characters and traceable factor representations	143

6.8. Finite traces	146
6.9. Addenda	149
CHAPTER 7. THE QUASI-SPECTRUM	151
7.1. The space of factor representations	151
7.2. Definition of the quasi-spectrum	154
7.3. Relations between the spectrum and the quasi-spectrum	155
7.4. The finite part of the quasi-spectrum	159
7.5. Addenda	160
CHAPTER 8. INTEGRATION AND DISINTEGRATION OF REPRESENTATIONS	162
8.1. Integration of representations	162
8.2. Equivalence of two direct integrals of representations	165
8.3. Disintegration of representations	167
8.4. Central disintegration	169
8.5. Disintegration into irreducible representations	173
8.6. The case of postliminal C^* -algebras	174
8.7. An interlude	178
8.8. Disintegration of a positive form and of a trace	180
8.9. Addenda	188
CHAPTER 9. C^* -ALGEBRAS OF TYPE I	190
9.1. Statement of the theorem, start of the proof	190
9.2. Preliminaries concerning systems of matrix units	191
9.3. Some lemmas	197
9.4. The proof of the theorem, concluded	206
9.5. Addenda	209
CHAPTER 10. CONTINUOUS FIELDS OF C^* -ALGEBRAS	211
10.1. Continuous fields of Banach spaces	211
10.2. Total subsets	215
10.3. Continuous fields of C^* -algebras	218
10.4. The C^* -algebra defined by a continuous field of C^* - algebras	219
10.5. The continuous field of C^* -algebras defined by certain C^* -algebras	223
10.6. Some remarks concerning elementary C^* -algebras	227

10.7.	The continuous field of elementary C^* -algebras defined by a continuous field of Hilbert spaces	230
10.8.	Locally trivial fields of elementary C^* -algebras	237
10.9.	Application to C^* -algebras with continuous trace	245
10.10.	Addenda	246
CHAPTER 11. EXTENSION TO C^* -ALGEBRAS OF THE STONE-WEIERSTRASS THEOREM		
		250
11.1.	The case of postliminal C^* -algebras	250
11.2.	Abundance of pure states in certain C^* -algebras	253
11.3.	Statement of the theorem	255
11.4.	Several lemmas	256
11.5.	Proof of the theorem	261
11.6.	Addenda	263
CHAPTER 12. THE ENVELOPING VON NEUMANN ALGEBRA OF A C^* -ALGEBRA		
		264
12.1.	The second dual of a C^* -algebra	264
12.2.	Polar decomposition of a linear form	267
12.3.	Decomposition of an hermitian form into positive and negative parts	271
12.4.	The positive part of an ideal in a C^* -algebra	273
12.5.	Addenda	275
Part II. APPLICATIONS TO GROUP REPRESENTATIONS		
CHAPTER 13. UNITARY REPRESENTATIONS OF LOCALLY COMPACT GROUPS		
		279
13.1.	Elementary definitions concerning representations	279
13.2.	The involutive algebra $L^1(G)$	282
13.3.	Representations of G and representations of $L^1(G)$	283
13.4.	Positive forms on $L^1(G)$ and positive-definite functions	286
13.5.	Weak*-convergence and compact convergence of continuous positive-definite functions	291
13.6.	Pure positive-definite functions	292
13.7.	Positive-definite measures	295
13.8.	Square-integrable positive-definite functions	299
13.9.	The C^* -algebra of a locally compact group	303

13.10. The Hilbert algebra of a unimodular locally compact group	304
13.11. Addenda	305
CHAPTER 14. SQUARE-INTEGRABLE IRREDUCIBLE REPRESENTATIONS	
14.1. Definition of square-integrable representations	309
14.2. Square-integrable representations and minimal biinvariant subspaces of $L^2(G)$	310
14.3. Coefficients of square-integrable representations	311
14.4. Formal dimension and trace	315
14.5. Integrable representations	316
14.6. Addenda	317
CHAPTER 15. REPRESENTATIONS OF COMPACT GROUPS	
15.1. Complete reducibility	319
15.2. Irreducible representations of a compact group	321
15.3. Characters of compact groups	322
15.4. Representations of finite groups	327
15.5. Use of compact subgroups of arbitrary groups	329
15.6. Addenda	331
CHAPTER 16. ALMOST-PERIODIC FUNCTIONS	
16.1. The compact group associated with a topological group	333
16.2. Almost-periodic functions	335
16.3. The mean of an almost-periodic function	337
16.4. Groups injectable in a compact group	338
16.5. Addenda	341
CHAPTER 17. CHARACTERS OF A LOCALLY COMPACT GROUP	
17.1. Definitions	343
17.2. The character defined by a measure, and by a distribution	344
17.3. Characters of finite type	348
17.4. Addenda	351
CHAPTER 18. THE DUAL OF A LOCALLY COMPACT GROUP	
18.1. Definition of the dual	353
18.2. The Fourier transformation	356
18.3. The reduced dual	357

18.4.	The reduced dual and integrable representations	362
18.5.	The Mackey Borel structure	363
18.6.	The quasi-dual	364
18.7.	Integration and disintegration of representations	364
18.8.	The Plancherel measure	367
18.9.	Addenda	370
