
CONTENTS

Preface	xi
1 PRELIMINARY CONCEPTS	1
1.1 Introduction	1
1.2 Basic Concepts	2
1.3 Matrix and Vector Terminology	3
1.4 Some Special Matrices	5
1.5 Matrix Equality	7
1.6 Matrix Addition and Subtraction	7
1.7 Matrix Multiplication	8
1.8 Matrix Division and Matrix Inversion	16
1.9 Powers and Roots of Square Matrices	17
1.10 Further Properties of the Transpose	18
1.11 Some Special Matrices	20
1.12 Exercises	21
2 DETERMINANTS	25
2.1 Introduction	25
2.2 Some Examples of the Solution of Simultaneous Equations	26
2.3 Evaluation of Second- and Third-Order Determinants	29
2.4 Preliminary Rules for Operation with Determinants	30

2.5	Minors, Complementary Minors, Algebraic Complements, and Cofactors	37
2.6	The Cofactor Matrix	40
2.7	Rules for Operations with Cofactors	42
2.8	Determinant Evaluation by Pivotal Condensation	44
2.9	Exercises	48
3	MATRIX INVERSION	51
3.1	Introduction	51
3.2	Matrix Inversion	52
3.3	Properties of the Inverse	52
3.4	The Adjoint Matrix	54
3.5	Determination of the Inverse	55
3.6	A Proof of Cramer's Rule	60
3.7	Methods for Obtaining the Inverse	62
3.8	Elementary Transformation Matrices	62
3.9	Inverse of a Matrix by Successive Transformations	69
3.10	Finding the Inverse by the Sweep-Out Method	72
3.11	Labor-Saving Possibilities Involving Symmetric Matrices	74
3.12	Exercises	76
4	PARTITIONING OF MATRICES	79
4.1	Introduction	79
4.2	Addition and Subtraction of Partitioned Matrices	80
4.3	Multiplication of Partitioned Matrices	81
4.4	Transpose of a Partitioned Matrix	84
4.5	Inverse of a Nonsymmetrical Matrix by Partitioning	85
4.6	Inverse of a Symmetrical Matrix by Partitioning	90
4.7	Exercises	95
5	SIMULTANEOUS EQUATIONS	97
5.1	Introduction	97
5.2	Linear Dependence and Independence	98
5.3	Linear Combinations	100
5.4	The Rank of a Matrix	100
5.5	Relationship Between Rank and Linear Independence	102
5.6	Conditions for the Solution of Simultaneous Equations	102
5.7	Examples: Nonhomogeneous Cases	103
5.8	Homogeneous Equations	106
5.9	Equivalence of Matrices	108
5.10	Gaussian Elimination	109
5.11	Triangular Matrices	113

5.12	Triangular Decompositions	117
5.13	The Crout Reduction	118
5.14	Quadratic Forms and Positive Definite Matrices	120
5.15	The Cholesky Reduction	121
5.16	The Forward and Back Substitution Algorithms	124
5.17	Exercises	127
6	ORTHOGONALITY AND COORDINATE TRANSFORMATIONS	129
6.1	Introduction	129
6.2	Orthogonal Vectors	129
6.3	The Scalar or Dot Product Revisited	132
6.4	The Cauchy-Schwartz and Triangle Inequalities	132
6.5	The Angle and the Perpendicular Distance Between Two Vectors	133
6.6	Direction Cosines	134
6.7	The Linear Independence of a Set of Vectors	135
6.8	Orthogonal Matrices	137
6.9	The Gram-Schmidt Orthogonalization Process	140
6.10	Linear Transformations	144
6.11	The Geometric Interpretation of Linear Transformations	145
6.12	The Transformation of Coordinates	148
6.13	Exercises	157
7	THE EIGENVALUE PROBLEM	159
7.1	Introduction	159
7.2	Eigenvalues	161
7.3	Properties of the Characteristic Polynomial	162
7.4	Methods for the Generation of the Characteristic Polynomial	163
7.5	The Characteristic Polynomial from the Principal Minors of a Matrix	163
7.6	Bocher's Method	164
7.7	Leverrier's Method	166
7.8	Eigenvectors for Nonrepeated Eigenvalues	168
7.9	Eigenvectors for Repeated Eigenvalues	171
7.10	The Modal Matrix	176
7.11	Eigenvalues and Eigenvectors for Symmetrical Matrices	176
7.12	Additional Properties of Eigenvalues and Eigenvectors	181
7.13	The Diagonal Form of a Matrix	184
7.14	Powers and Roots of Matrices	187
7.15	Eigenvalues and Eigenvectors Via an Iterative Process	190

7.16	Hotelling's Deflation	195
7.17	Exercises	195
8	MATRIX POLYNOMIALS AND THE CALCULUS OF MATRICES	197
8.1	Introduction	197
8.2	The Cayley-Hamilton Theorem	198
8.3	Two Applications of the Cayley-Hamilton Theorem	201
8.4	An Interesting Application of the Remainder Theorem of Algebra	207
8.5	Infinite Series Involving Matrices	208
8.6	Sylvester's Theorem	209
8.7	Matrix Functions with Distinct Eigenvalues	214
8.8	Matrix Functions with Repeated Eigenvalues	216
8.9	Another Method	218
8.10	The Solution of Differential Equations	221
8.11	Use of the Integrating Factor and the Solution Method	223
8.12	Solution of Simultaneous Differential Equations	226
8.13	Exercises	228
9	EXAMPLES	231
9.1	Introduction	231
9.2	Steady-State DC Electrical Node-to-Datum and Mesh Analysis	231
9.3	State Space or State Variable Analysis	257
9.4	Undamped Free Vibrations of a Mechanical System	266
9.5	Conclusion	272
	Appendix A The Roots of Polynomial Equations	273
A.1	Preliminaries	273
A.2	Where to Begin and Descartes's Rule of Signs	274
A.3	Synthetic Division	276
A.4	Transformation of Polynomial Equations	278
A.5	Horner's Method	281
A.6	Algebraic Solution of Quadratic, Cubic, and Quartic Equations	284
A.7	Graeffe's Root Squaring Method	291
	INDEX	305
