

# contents

## 1 systems of linear equations 1

1.1	introduction	1
1.2	systems of equations in everyday life	8
1.3	introduction to matrices	11
1.4	Gauss-Jordan elimination	15
1.5	Gaussian elimination	28
1.6	Applications: Kirchhoff's law, balancing chemical equations, Leontief's model of economics	32

## 2 matrices 41

2.1	matrix addition and scalar multiplication	41
2.2	a great idea—matrix multiplication	47
2.3	more on matrix multiplication	51
2.4	the properties of matrix arithmetic	56
2.5	row reduction and matrix multiplication; finding the inverse of a matrix	67
2.6	the system $AX = B$ when $A$ is invertible	75
2.7	the system $AX = B$ when $A$ is not invertible	81
2.8	applications: simple applications of matrix multiplication, the adjacency matrix of a graph	84

## 3 determinants 93

3.1	motivation	93
3.2	the definition of the determinant	99
3.3	expansion by minors	104
3.4	the determinant and elementary row operations	110
3.5	the determinant and invertibility	116
3.6	a formula for $A^{-1}$	124
3.7	Cramer's rule	128

---

## 7 eigenvalues and eigenvectors 329

	<p>7.1 eigenvalues, eigenvectors, and the diagonalization of matrices 329</p> <p>7.2 computing the eigenvalues and eigenvectors of a matrix 338</p> <p>7.3 more on the diagonalization of matrices 346</p> <p>7.4 the diagonalizability of linear operators 353</p> <p>7.5 computing the eigenvalues and eigenvectors of a linear operator 360</p> <p>7.6 applications: the powers of a diagonalizable matrix and recurrence relations 371</p>
--	--

## 8 inner product spaces 381

	<p>8.1 the definition of an inner product space 381</p> <p>8.2 properties of the inner product 388</p> <p>8.3 orthonormal bases 396</p> <p>8.4 the Gram-Schmidt process 404</p> <p>8.5 orthogonal diagonalizability 411</p>
--	---

## 9 two applications of diagonalization 419

	<p>9.1 differential equations 419</p> <p>9.2 quadratic forms 427</p>
--	--

## 10 computational methods 441

	<p>10.1 introduction; floating point numbers and roundoff error 441</p> <p>10.2 Gaussian elimination with partial pivoting 444</p> <p>10.3 conditioned matrices 448</p> <p>10.4 iterative methods for solving systems of equations 453</p> <p>10.5 approximating eigenvalues and eigenvectors 459</p>
--	---

## 4 two- and three-dimensional Euclidean space 133

	<p>4.1 introduction 133</p> <p>4.2 definition of Euclidean space 134</p> <p>4.3 the arithmetic of vectors 140</p> <p>4.4 the norm of a vector 149</p> <p>4.5 the dot product 152</p> <p>4.6 bases 162</p> <p>4.7 orthonormal bases 168</p> <p>4.8 the cross product 172</p> <p>4.9 applications: equations of lines and planes in three-dimensional space 177</p>
--	---

## 5 vector spaces 187

	<p>5.1 the definition of a vector space; examples 187</p> <p>5.2 subspaces 198</p> <p>5.3 the linear span of a set of vectors 203</p> <p>5.4 bases and linear independence 212</p> <p>5.5 more on bases and linear independence 221</p> <p>5.6 the solution space of a homogeneous system 226</p> <p>5.7 the row and column spaces of a matrix 232</p> <p>5.8 coordinate matrices 239</p> <p>5.9 the change of basis problem for vectors 246</p>
--	--

## 6 linear transformations 253

	<p>6.1 matrix transformations 253</p> <p>6.2 linear transformations 259</p> <p>6.3 some simple properties of linear transformations 266</p> <p>6.4 the vector space <math>\text{Lin}(V, W)</math>; the composition of linear transformations 270</p> <p>6.5 the kernel and range of a linear transformation 279</p> <p>6.6 isomorphisms 287</p> <p>6.7 linear transformations from <math>R^n</math> to <math>R^m</math> 295</p> <p>6.8 the matrix of a linear transformation 299</p> <p>6.9 the change of basis problem for linear operators 309</p> <p>6.10 similarity 314</p> <p>6.11 applications: plane linear transformations 318</p>
--	--

appendix a the phrase “if and only if” 465

appendix b functions 469

answers to selected exercises 495
