Preface	vii
<b>I CERTAINTY MODELS</b>	<b>1</b>
<b>Chapter 1 A Model of the Accumulation and Allocation of Wealth by Individuals</b>	<b>3</b>
I. THE ECONOMIC THEORY OF CHOICE	3
I.A. Opportunities and Preferences	3
I.B. Representation of Preferences: The Utility Function and Indifference Curves	4
I.B.1. The axioms of choice and the principle of maximum utility	5
I.B.2. Indifference curves and the geometrical representation of preferences	7
I.B.3. The axioms of nonsatiation and convexity	9
I.C. The Opportunity Set	12
I.D. Choice Subject to Constraints	13
*I.E. The Solution in Mathematical Form	15
II. THE APPLICATION OF THE THEORY OF CHOICE TO THE ALLOCATION OF FINANCIAL RESOURCES OVER TIME	16
II.A. The Two-Period Case	16
II.A.1. The objects of choice: standards of living at different points in time	17
*II.A.2. The properties of $U(c_1, c_2, \dots, c_t, \dots)$	19
II.A.3. Opportunities: resources and capital markets	20
II.A.4. The opportunity set under perfect capital markets	22
II.A.5. Interest rates and present values	24
II.A.6. The preferred allocation	27
II.B. Extension to Three or More Time Periods	28
II.B.1. The structure of prices for claims	29
II.B.2. An equivalent representation in terms of interest rates	31
II.B.3. Multiperiod rates of interest and the concept of the term structure	34
II.B.4. The equal rate of return principle	36
II.B.5. The $n$ -period opportunity set	38
*II.B.6. The optimal allocation in the multiperiod case; mathematical treatment	39
II.C. Conclusion	40
<b>Appendix: An Illustrative Application of the Wealth Allocation Model: The Life Cycle of Savings</b>	<b>42</b>
I. THE BASIC FRAMEWORK	42
I.A. Smoothing Irregularities in the Income Stream	42

I.B.	Some Specifications and Simplifications	43
I.C.	Consumption, Saving, and Wealth over the Life Cycle	44
I.D.	Consumption and Saving with a Growing Income	47
I.E.	The Effects of Changes in Income and Wealth	51
II.	CONSUMPTION, SAVING, AND THE RATE OF INTEREST	51
II.A.	Some Additional Assumptions: Homogeneity and Its Implications	51
II.B.	Interest Rates and Consumption Decisions over the Life Cycle	53
 <b>Chapter 2 Extension of the Model to Durable Commodities, Production, and Corporations</b>		 <b>58</b>
I.	DURABLE COMMODITIES AND INVESTMENT	59
I.A.	Representation of the Carry-over Opportunities Provided by Commodity Storage and Production	59
I.B.	The Opportunity Set When Both Commodity Carry-overs and Capital Markets Are Available	61
I.C.	The Case of Production and Investment	62
I.C.1.	The double-tangency solution	62
I.C.2.	Some remaining issues	64
*I.D.	The Solution in the $n$ -Period Case	64
II.	EXTENSION TO THE CASE OF CORPORATIONS	67
II.A.	Management Objectives and Stockholder Preferences	67
II.B.	The Market Value Criterion	69
II.B.1.	The case of many owners	70
*II.C.	The Market Value Criterion in the General $n$ -Period Case	72
II.D.	The Market Value Criterion: Some Problems and Limitations	73
II.D.1.	The market value rule and profit maximization	74
II.D.2.	The market value rule and management motivation	75
II.D.3.	The criterion problem under imperfect capital markets	76
III.	MARKET VALUE, DIVIDENDS, AND STOCKHOLDER RETURNS	78
III.A.	The Effect of Dividend Policy	78
III.A.1.	Assumptions, notation, and timing conventions	78
III.A.2.	The equal rate of return principle once again	79
III.B.	The Effects of Dividend Policy on the Market Value of the Shares	80
III.C.	A Graphical Illustration	81
III.D.	The Independence Proposition Further Considered	84
III.D.1.	The bird-in-the-hand argument	84
III.D.2.	Dividend policy and the internal rate of return	85
III.E.	Some Equivalent Alternative Valuation Formulas	86
III.E.1.	The stream of dividends approach	86
III.E.2.	Cash flow and earnings approaches	87
III.E.3.	Investment opportunities, growth, and valuation	89
III.F.	Growth Potential and Stockholder Returns	92
III.F.1.	The constant growth model	94
III.F.2.	The growth of total earnings and the growth of dividends and price per share	94
III.F.3.	Corporate earnings and investor returns	96
IV.	SUMMARY	97

	<b>Appendix: Valuation Formulas: Some Numerical Illustrations</b>	<b>100</b>
I.	FINANCIAL POLICY, RETURNS, AND VALUATION	100
II.	AN EXAMPLE USING THE CONSTANT GROWTH MODEL	104
<b>Chapter 3</b>	<b>Criteria for Optimal Investment Decisions</b>	<b>108</b>
I.	THE REPRESENTATION OF OPTIMAL INVESTMENT DECISIONS	109
I.A.	The Case of a Single Capital Good and Two Time Periods	109
I.B.	Graphical Representation of the Complete Solution	111
I.C.	An Alternative Representation Highlighting the Investment Decision	115
I.C.1.	Alternative forms for the optimizing conditions	117
I.C.2.	Optimal capital stock and optimal investment	118
I.D.	Extension to the Case of Many Different Machines	119
I.E.	The Investment Decision and the Transformation Curve	121
I.F.	Extension to More than Two Time Periods	122
I.F.1.	The case of perfect markets for capital goods	122
I.F.2.	The case of fixed capital	123
II.	INVESTMENT DECISIONS AND CAPITAL BUDGETING	126
II.A.	Problems in the Application of the Present Value Criterion	126
II.A.1.	Marginal versus average present values	127
II.A.2.	Comparing investments with different lives	128
II.B.	Replacement Policies and the Optimal Economic Life of Equipment	130
II.C.	Maximizing Present Value Subject to Constraints	134
II.D.	The Rate of Return Criterion: Uses and Abuses	137
II.D.1.	The discounted cash flow rate of return	137
II.D.2.	Mutually exclusive investments and multiple rates of return	139
II.D.3.	A modified rate of return rule for the mutually exclusive case	140
II.E.	The Rate of Return, Rankings of Projects, and Financial Constraints	142
II.F.	Conclusion	143
<b>Chapter 4</b>	<b>Financing Decisions, Investment Decisions, and the Cost of Capital</b>	<b>147</b>
I.	INTRODUCTION	147
II.	MARKET SETTING	148
III.	CAPITAL STRUCTURE AND MARKET VALUES	150
III.A.	Two-Period Market Equilibrium Model	150
III.B.	Multiperiod Model	156
III.C.	Two Partial Equilibrium Treatments	157
III.C.1.	Two-period states of the world model	157
III.C.2.	The market value of a firm in the two-period risk class model	160
III.C.3.	The market value of a firm in a multiperiod risk class model	164
III.C.4.	The effects of financing decisions on the firm's bondholders and shareholders	167
III.C.5.	Summary	170
III.D.	Market Imperfections: The Effects of Tax Laws	170

III.D.2.	The tax deductibility of personal interest payments	174
III.D.3.	Some closing comments on market imperfections	175
IV.	THE FIRM'S OBJECTIVE FUNCTION: THE MARKET VALUE RULE	176
IV.A.	The Market Value Rule: Derivation	176
IV.B.	The Market Value Rule: Implementation	178
V.	THE COST OF CAPITAL AND THE RETURN ON A FIRM'S SHARES	181
V.A.	Discount Rates and the Cost of Capital	181
V.B.	The Expected Return on Common Stock	184
VI.	SUMMARY AND CONCLUSIONS	187
<b>Chapter 5 The Expected Utility Approach to the Problem of Choice Under Uncertainty</b>		<b>189</b>
I.	INTRODUCTION	189
II.	THE EXPECTED UTILITY MODEL: GENERAL AXIOMATIC TREATMENT	190
II.A.	The Axiom System	192
II.B.	Derivation of the Expected Utility Rule	194
II.C.	Some Properties of the Utility Functions Implied by the Expected Utility Model	196
III.	THE TIMELESS EXPECTED UTILITY OF WEALTH MODEL	198
III.A.	Obtaining the Utility of Wealth Function from Axiom 4	199
III.B.	Usual Types of Utility of Wealth Functions: Risk Aversion, Risk Preference, and Risk Neutrality	200
IV.	EXPECTED UTILITY AND THE THEORY OF FINANCE	203
IV.A.	The Multiperiod Expected Utility of Consumption Model	203
IV.B.	Utilities for Consumption Dollars from Utilities for Consumption Goods	206
V.	CONCLUSION	207
<b>Appendix: Statistical Review</b>		<b>209</b>
I.	INTRODUCTION	209
II.	EXPECTED VALUES OF WEIGHTED SUMS OF RANDOM VARIABLES	209
III.	THE VARIANCE OF A WEIGHTED SUM OF RANDOM VARIABLES	211
<b>Chapter 6 The Two-Period Consumption-Investment Model</b>		<b>215</b>
I.	INTRODUCTION	215
I.A.	The Mean-Standard Deviation Model: An Overview	216
I.B.	A Familiar Picture	220
II.	THE CONSUMER'S TASTES	222
*II.A.	Portfolio Decisions Based on $E(\tilde{R})$ and $\sigma(\tilde{R})$	223
*II.B.	Marginal Expected Utilities and the Efficient Set Theorem	224
*II.C.	Properties of Indifference Curves in the Two-Parameter Model	226
III.	THE INVESTMENT OPPORTUNITY SET: TWO-ASSET CASE	228

IV.	THE EFFICIENT SET AND CONSUMER EQUILIBRIUM WITH $N$ ASSETS	233
IV.A.	Definitions and Elementary Expressions for the $N$ -Asset Model	234
IV.B.	Geometric Representation of Consumer Equilibrium	236
*IV.C.	Algebraic Representation of Consumer Equilibrium	243
IV.D.	Some Odds and Ends of the Mean-Standard Deviation Model	250
IV.D.1.	The investment assets to be included in portfolio models	250
IV.D.2.	The effects of diversification: algebraic treatment	253
IV.D.3.	Quadratic utility functions	256
IV.D.4.	Why normality?	259
V.	THE TWO-PARAMETER MODEL WITH SYMMETRIC-STABLE DISTRIBUTIONS OF PORTFOLIO RETURNS	261
V.A.	Properties of Stable Distributions: A Brief Review	261
V.B.	Representation of the Consumer's Tastes: The Efficient Set Theorem	265
V.C.	The Opportunity Set with Stable Return Distributions	267
V.C.1.	The market model	267
V.C.2.	Diversification and the distribution of portfolio return	269
V.C.3.	The efficient set	271
V.C.4.	Consumer equilibrium	273
VI.	CONCLUSIONS	274
<b>Chapter 7</b>	<b>Risk, Return, and Market Equilibrium</b>	<b>276</b>
I.	INTRODUCTION	276
II.	THE MARKET SETTING	277
III.	RISK AND EXPECTED RETURN FROM THE VIEWPOINT OF A CONSUMER	279
III.A.	The Risks of Assets and Portfolios	279
III.B.	The Relationship between Risk and Expected Return	281
IV.	RISK AND EXPECTED RETURN FOR THE MARKET	286
IV.A.	Homogeneous Expectations and Portfolio Opportunities	287
IV.B.	The Role of a Riskless Asset	288
IV.C.	Interpretation	290
IV.C.1.	Risk and expected return in the market portfolio	290
IV.C.2.	Homogeneous expectations and the riskless asset: a closer look	292
V.	EQUILIBRIUM EXPECTED RETURN AND THE MARKET VALUE OF A FIRM	295
VI.	OPTIMAL PRODUCTION DECISIONS BY FIRMS	299
VI.A.	The Firm's Objective Function	299
VI.B.	Optimal Production Decisions: Single-Activity Firms	301
VI.C.	Optimal Production Decisions: Multiple-Activity Firms	304
VI.D.	Optimal Production Decisions: Some Comments	307
*VII.	ALGEBRAIC TREATMENT OF CAPITAL MARKET EQUILIBRIUM	308
VII.A.	Consumer Equilibrium	309
VII.B.	Equilibrium for the Firm	311
VII.C.	Market Equilibrium	312

VIII.	MARKET EQUILIBRIUM WITH SYMMETRIC-STABLE RETURN DISTRIBUTIONS	313
VIII.A.	The Market Model Return-Generating Process	313
VIII.B.	Consumer Equilibrium and the Measurement of Risk	314
VIII.C.	Risk and Return for the Market	317
IX.	CONCLUSIONS	318
<b>Chapter 8</b>	<b>Multiperiod Models</b>	<b>321</b>
I.	INTRODUCTION	321
II.	MULTIPERIOD CONSUMPTION-INVESTMENT DECISIONS	322
II.A.	The Problem	322
II.B.	The Wealth Allocation Model	323
II.C.	Implications: Bridging the Gap between Two-Period and Multiperiod Models	326
II.C.1.	The utility of money function	327
II.C.2.	Two-period and multiperiod models: general treatment	327
II.C.3.	A multiperiod setting for two-period two-parameter portfolio models	329
II.C.4	Theorems and proofs	332
III.	EFFICIENT CAPITAL MARKETS	335
III.A.	Expected Return or Fair Game Models	336
III.B.	The Submartingale Model	338
III.C.	The Random Walk Model	339
	Index	343
