

# Contents

*Preface* ix

<b>Chapter 0</b>	<b>ELEMENTS OF ANALYTIC GEOMETRY</b>	<b>1</b>
	1. Numbers 1 / 2. Plane analytical geometry 9 / 3. Lines 17 / 4. Parabolas 28	
<b>Chapter 1</b>	<b>FUNCTIONS</b>	<b>36</b>
	1. Definitions / 2. Types of functions / 3. Graphs of functions / 4. Combinations of functions / 5. Inverse functions	
<b>Chapter 2</b>	<b>LIMITS</b>	<b>53</b>
	1. Introduction to limits / 2. Definition of limit / 3. Continuity / 4. One-sided limits / 5. Infinite limits / 6. The limit theorems	
<b>Chapter 3</b>	<b>DERIVATIVES</b>	<b>93</b>
	1. Definitions / 2. Tangent lines / 3. Continuity of a differentiable function / 4. Differentiation formulas / 5. Product and quotient differentiation formulas / 6. The chain rule / 7. Algebraic functions / 8. Implicit differentiation / 9. Higher derivatives / 10. Differentials	
<b>Chapter 4</b>	<b>APPLICATIONS OF THE DERIVATIVE</b>	<b>129</b>
	1. Extrema of a function / 2. Monotonic functions / 3. Relative extrema of a function / 4. Concavity / 5. Applications of the theory of extrema / 6. Velocity and acceleration / 7. Antiderivatives / 8. Related rates	

<b>Chapter 5</b>	<b>INTEGRALS</b>	<b>179</b>
	1. Completeness of the real number system / 2. Area / 3. The sigma notation / 4. Integrals / 5. Fundamental theorem of the calculus / 6. Integration formulas / 7. Change of variable / 8. Sequences / 9. Riemann sums / 10. Appendix on theory	
<b>Chapter 6</b>	<b>APPLICATIONS OF THE INTEGRAL</b>	<b>234</b>
	1. Areas / 2. Volume / 3. Work / 4. Arc length / 5. Approximations by the trapezoidal rule / 6. Approximations by Simpson's rule	
<b>Chapter 7</b>	<b>EXPONENTIAL AND LOGARITHMIC FUNCTIONS</b>	<b>267</b>
	1. Intuitive approach / 2. The natural logarithm / 3. The natural exponential function / 4. Derivatives and integrals / 5. Hyperbolic functions / 6. Change of base / 7. Exponential laws of growth and decay	
<b>Chapter 8</b>	<b>TRIGONOMETRIC AND INVERSE TRIGONOMETRIC FUNCTIONS</b>	<b>299</b>
	1. Radian measure / 2. The sine and cosine functions / 3. The other trigonometric functions / 4. Inverse trigonometric functions / 5. Derivatives of inverse trigonometric functions	
<b>Chapter 9</b>	<b>FORMAL INTEGRATION</b>	<b>325</b>
	1. Elementary integration formulas / 2. Integration by parts / 3. Trigonometric substitutions / 4. Integration of rational functions / 5. Separable differential equations	
<b>Chapter 10</b>	<b>FURTHER APPLICATIONS OF THE CALCULUS</b>	<b>355</b>
	1. The central conics; the ellipse / 2. The hyperbola / 3. Translation of axes / 4. Moments and centers of mass / 5. Centroid of a plane region / 6. Centroids of solids of revolution / 7. Force on a dam	
<b>Chapter 11</b>	<b>INDETERMINATE FORMS, IMPROPER INTEGRALS, AND TAYLOR'S FORMULA</b>	<b>392</b>
	1. Indeterminate forms / 2. Further indeterminate forms / 3. Improper integrals / 4. Taylor's formula / 5. Approximations by Taylor's polynomials	
<b>Chapter 12</b>	<b>INFINITE SERIES</b>	<b>419</b>
	1. Partial sums and terms / 2. Positive term series / 3. Comparison test / 4. Alternating series / 5. Absolute convergence / 6. Power series / 7. Operations on power series / 8. Taylor's series / 9. Appendix: Differentiation and integration of power series	

<b>Chapter 13</b>	<b>PLANE CURVES, VECTORS, AND POLAR COORDINATES</b>	<b>472</b>
	1. Plane curves / 2. Continuity of a curve / 3. Two-dimensional vector algebra / 4. Vector methods in geometrical proofs / 5. Vector-valued functions / 6. Plane motion / 7. Polar coordinate systems / 8. The conic sections / 9. Tangent lines in polar coordinates / 10. Areas in polar coordinates / 11. Arc length of a curve / 12. Appendix: Proof of the arc length formula / 13. Area of a surface of revolution	
<b>Chapter 14</b>	<b>THREE-DIMENSIONAL ANALYTIC GEOMETRY</b>	<b>535</b>
	1. Three-dimensional space / 2. Three-dimensional vectors / 3. Lines in space / 4. Planes in space / 5. The cross product / 6. Cylinders and surfaces of revolution / 7. Quadric surfaces / 8. Space curves / 9. Cylindrical and spherical coordinate systems	
<b>Chapter 15</b>	<b>DIFFERENTIAL CALCULUS OF FUNCTIONS OF SEVERAL VARIABLES</b>	<b>587</b>
	1. Limits and continuity / 2. Partial derivatives / 3. Differentials / 4. The chain rule / 5. Directional derivatives / 6. Tangent planes / 7. The implicit function theorem / 8. Extrema of a function of two variables / 9. Appendix: Functions defined by integrals	
<b>Chapter 16</b>	<b>MULTIPLE INTEGRATION</b>	<b>642</b>
	1. Double integrals / 2. A condition for integrability / 3. Repeated integrals / 4. Volume / 5. Integrals over nonrectangular regions / 6. Polar coordinates / 7. Center of mass of a lamina / 8. Moments in inertia / 9. Triple integrals / 10. Physical applications of triple integrals / 11. Cylindrical and spherical coordinates / 12. Appendix: Equality of the double and repeated integrals	
<b>Chapter 17</b>	<b>FURTHER TOPICS IN INTEGRATION</b>	<b>695</b>
	1. Line integrals / 2. Path-independent line integrals / 3. Green's theorem / 4. Transformation of coordinates / 5. Change of variables in multiple integrals	
<b>Chapter 18</b>	<b>DIFFERENTIAL EQUATIONS</b>	<b>720</b>
	1. Introduction / 2. Families of curves / 3. Boundary conditions / 4. Exact differential equations / 5. The differential notation / 6. Homogeneous equations / 7. First-order linear differential equations / 8. Applications / 9. Complex numbers / 10. Euler's formula / 11. Second-order differential equations / 12. Nonhomogeneous linear equations / 13. Solutions in series	
<b>Appendix A</b>	<b>FACTS AND FORMULAS FROM TRIGONOMETRY</b>	<b>A1</b>
<b>Appendix B</b>	<b>TABLE OF INTEGRALS</b>	<b>B1</b>

**Contents**

<b><i>Appendix C</i></b>	<b>NUMERICAL TABLES</b>	<b>C1</b>
	I. Logarithms to base 10 / II. Logarithms to base $e$ / III. $e^x$ and $e^{-x}$ / IV. Trigonometric functions	
<b><i>Appendix D</i></b>	<b>ANSWERS TO ODD-NUMBERED EXERCISES</b>	<b>D1</b>
	<b>INDEX</b>	<b>E1</b>
