

Contents

Part I Preliminaries

| | | |
|----------|---|----|
| 1 | Ultrafilters | 3 |
| 1.1 | Basics on Ultrafilters | 3 |
| 1.2 | The Space of Ultrafilters βS | 5 |
| 1.3 | The Case of a Semigroup | 7 |
| 1.4 | The Existence of Idempotents in Semitopological Semigroups..... | 8 |
| 1.5 | Partial Semigroups | 8 |
| | Notes and References | 9 |
| 2 | Nonstandard Analysis | 11 |
| 2.1 | Warming-Up | 11 |
| 2.2 | The Star Map and the Transfer Principle..... | 14 |
| | 2.2.1 Additional Assumptions | 18 |
| 2.3 | The Transfer Principle, in Practice | 20 |
| 2.4 | The Ultrapower Model | 22 |
| | 2.4.1 The Ultrapower Construction | 23 |
| | 2.4.2 Hyper-Extensions in the Ultrapower Model | 24 |
| | 2.4.3 The Properness Condition in the Ultrapower Model | 27 |
| | 2.4.4 An Algebraic Presentation | 28 |
| 2.5 | Internal and External Objects | 29 |
| | 2.5.1 Internal Objects in the Ultrapower Model..... | 32 |
| 2.6 | Hyperfinite Sets | 33 |
| | 2.6.1 Hyperfinite Sums | 36 |
| 2.7 | Overflow and Underflow Principles | 37 |
| | 2.7.1 An Application to Graph Theory | 37 |
| 2.8 | The Saturation Principle | 39 |
| | 2.8.1 Saturation in the Ultrapower Model | 40 |
| 2.9 | Hyperfinite Approximation | 41 |
| | Notes and References | 42 |

| | | |
|------------------------------|---|-----|
| 3 | Hyperfinite Generators of Ultrafilters | 45 |
| 3.1 | Hyperfinite Generators | 45 |
| 3.2 | The Case of a Semigroup Again | 47 |
| | Notes and References | 48 |
| 4 | Many Stars: Iterated Nonstandard Extensions | 49 |
| 4.1 | The Foundational Perspective | 49 |
| 4.2 | Revisiting Hyperfinite Generators | 51 |
| 4.3 | The Iterated Ultrapower Perspective | 52 |
| 4.4 | Revisiting Idempotents..... | 53 |
| | Notes and References | 54 |
| 5 | Loeb Measure | 55 |
| 5.1 | Premeasures and Measures | 55 |
| 5.2 | The Definition of Loeb Measure..... | 57 |
| 5.3 | Lebesgue Measure via Loeb Measure | 59 |
| 5.4 | Integration | 60 |
| 5.5 | Product Measure..... | 65 |
| 5.6 | Ergodic Theory of Hypercycle Systems..... | 66 |
| | Notes and References | 70 |
| Part II Ramsey Theory | | |
| 6 | Ramsey's Theorem | 73 |
| 6.1 | Infinite Ramsey's Theorem | 73 |
| 6.2 | Finite Ramsey Theorem..... | 75 |
| 6.3 | Rado's Path Decomposition Theorem | 75 |
| 6.4 | Ultrafilter Trees..... | 76 |
| | Notes and References | 79 |
| 7 | The Theorems of van der Waerden and Hales-Jewett | 81 |
| 7.1 | The Theorem of van der Waerden | 81 |
| 7.2 | The Hales-Jewett Theorem | 84 |
| | Notes and References | 88 |
| 8 | From Hindman to Gowers | 89 |
| 8.1 | Hindman's Theorem..... | 90 |
| 8.2 | The Milliken-Taylor Theorem | 92 |
| 8.3 | Gowers' Theorem | 93 |
| | Notes and References | 98 |
| 9 | Partition Regularity of Equations | 99 |
| 9.1 | Characterizations of Partition Regularity | 100 |
| 9.2 | Rado's Theorem | 101 |
| 9.3 | Nonlinear Diophantine Equations: Some Examples | 104 |
| | Notes and References | 106 |

Part III Combinatorial Number Theory

| | | |
|-----------|--|-----|
| 10 | Densities and Structural Properties | 111 |
| 10.1 | Densities | 111 |
| 10.2 | Structural Properties..... | 114 |
| 10.3 | Working in \mathbb{Z} | 117 |
| 10.4 | Furstenberg's Correspondence Principle | 120 |
| | Notes and References | 122 |
| 11 | Working in the Remote Realm | 123 |
| 11.1 | Finite Embeddability Between Sets of Natural Numbers | 123 |
| 11.2 | Banach Density as Shnirelmann Density in the Remote Realm ... | 126 |
| 11.3 | Applications | 128 |
| | Notes and References | 131 |
| 12 | Jin's Sumset Theorem | 133 |
| 12.1 | The Statement of Jin's Sumset Theorem and Some Standard Consequences..... | 133 |
| 12.2 | Jin's Proof of the Sumset Theorem | 135 |
| 12.3 | Beiglböck's Proof | 137 |
| 12.4 | A Proof with an Explicit Bound | 139 |
| 12.5 | Quantitative Strengthenings | 140 |
| | Notes and References | 143 |
| 13 | Sumset Configurations in Sets of Positive Density | 145 |
| 13.1 | Erdős' Conjecture | 145 |
| 13.2 | A 1-Shift Version of Erdős' Conjecture | 148 |
| 13.3 | A Weak Density Version of Folkman's Theorem | 151 |
| | Notes and References | 152 |
| 14 | Near Arithmetic Progressions in Sparse Sets | 153 |
| 14.1 | The Main Theorem | 153 |
| 14.2 | Connection to the Erdős-Turán Conjecture | 157 |
| | Notes and References | 160 |
| 15 | The Interval Measure Property | 161 |
| 15.1 | IM Sets | 161 |
| 15.2 | SIM Sets | 165 |
| | Notes and References | 169 |

Part IV Other Topics

| | | |
|-----------|--|-----|
| 16 | Triangle Removal and Szemerédi Regularity | 173 |
| 16.1 | Triangle Removal Lemma | 173 |
| 16.2 | Szemerédi Regularity Lemma | 177 |
| | Notes and References | 180 |

| | | |
|-----------|---|-----|
| 17 | Approximate Groups | 181 |
| 17.1 | Statement of Definitions and the Main Theorem | 181 |
| 17.2 | A Special Case: Approximate Groups of Finite Exponent | 183 |
| | Notes and References | 186 |
| A | Foundations of Nonstandard Analysis | 187 |
| A.1 | Foundations | 187 |
| A.1.1 | Mathematical Universes and Superstructures | 187 |
| A.1.2 | Bounded Quantifier Formulas | 189 |
| A.1.3 | Łos' Theorem | 192 |
| A.1.4 | Models That Allow Iterated Hyper-Extensions | 194 |
| | References | 197 |
| | Index | 203 |
