On the First-Order Theory of Real Exponentiation

EDIZIONI
DELLA
NORMALE

Contents

Introduction	vii
0.1. Outline of this work and main results	viii
0.2. Notation and prerequisites	x
Acknowledgments	xiii
1 Definably complete structures	1
1.1. Introduction	1
1.2. Basic calculus in definably complete structures	2
1.3. Calculus for C^∞ definable maps	4
1.4. Newton's method	6
1.5. Uniqueness of solutions of linear differential equations	7
1.6. Continuous definable maps on definably compact sets	9
2 Noetherian differential rings of functions	11
2.1. Introduction	11
2.2. Varieties of C^∞ definable functions	11
2.2.1. The implicit function theorem	12
2.3. Noetherian differential rings	14
2.4. Decomposition of noetherian varieties	17
2.5. Dimension of M -varieties	20
2.6. Khovanskii rings	26
3 Effective o-minimality	33
3.1. Introduction	33
3.2. Outline of the proof of the main theorem	35
3.3. W -structures and Charbonnel closure	39
3.4. Effective W -structures	43
3.5. Smooth approximation of the boundary	45
3.6. Cell decomposition	50

3.7.	Effective non-deterministic cell decomposition	55
3.8.	Non-deterministic computation of the complement	61
3.9.	Proof of Theorem 3.5.11	62
4	Remarks on the decidability problem for the real exponential field	67
4.1.	Introduction: The decidability problem	67
4.2.	Effectively continuous functions	69
4.3.	On the sign of closed exponential terms (The quantifier free theory)	73
4.4.	On the roots of exponential terms (The existential theory)	77
4.5.	Reduction to the existential theory	81
4.6.	Equivalent statements of decidability	85
4.7.	Axiomatizations	93
