

Contents

1	Basics	1
1.1	The Cauchy–Riemann equations and Cauchy’s integral theorem	1
1.2	The Cauchy integral formula and applications	3
1.3	Change of contour, isolated singularities, residues	6
1.4	The logarithm and powers	9
1.5	Infinite products	10
1.6	Reflection principles	11
1.7	Analytic continuation	12
1.8	The Stieltjes integral	14
1.9	Hilbert spaces	15
1.10	L^p spaces	17
	Remarks and further reading	19
2	Linear Fractional Transformations	21
2.1	The Riemann sphere	21
2.2	The cross-ratio and mapping properties of linear fractional transformations	25
2.3	Upper half plane and unit disk	27
	Exercises	29
	Remarks and further reading	31
3	Hyperbolic geometry	33
3.1	Distance-preserving transformations and “lines”	33
3.2	Construction of a distance function	34
3.3	The triangle inequality	37
3.4	Distance and area elements	38
	Exercises	39
	Remarks and further reading	40

4	Harmonic functions	41
4.1	Harmonic functions and holomorphic functions	41
4.2	The mean value property, the maximum principle, and Poisson's formula	42
4.3	The Schwarz reflection principle	45
4.4	Application: approximation theorems	46
	Exercises	47
	Remarks and further reading	49
5	Conformal maps and the Riemann mapping theorem	51
5.1	Conformal maps	51
5.2	The Riemann mapping theorem	52
5.3	Proof of Lemma 5.2.2; the Ascoli–Arzelà theorem	54
5.4	Boundary behavior of conformal maps	56
5.5	Mapping polygons: the Schwarz–Christoffel formula	57
5.6	Triangles and rectangles	59
5.7	Univalent functions	60
	Exercises	63
	Remarks and further reading	65
6	The Schwarzian derivative	67
6.1	The Schwarzian derivative as measure of curvature	67
6.2	Some properties of the Schwarzian	69
6.3	The Schwarzian and curves	70
6.4	The Riemann mapping function and the Schwarzian	71
6.5	Triangles and hypergeometric functions	74
6.6	Regular polygons and hypergeometric functions	77
	Exercises	80
	Remarks and further reading	82
7	Riemann surfaces and algebraic curves	83
7.1	Analytic continuation	83
7.2	The Riemann surface of a function	86
7.3	Compact Riemann surfaces	88
7.4	Algebraic curves: some algebra	89
7.5	Algebraic curves: some analysis	93
7.6	Examples: elliptic and hyperelliptic curves	95
7.7	General compact Riemann surfaces	97
7.8	Algebraic curves of higher genus	98
	Exercises	103
	Remarks and further reading	104
8	Entire functions	105
8.1	The Weierstrass product theorem	105
8.2	Jensen's formula	107

8.3	Functions of finite order	109
8.4	Hadamard's factorization theorem	111
8.5	Application to Riemann's xi function	112
8.6	Application: an inhomogeneous vibrating string	115
	Exercises	118
	Remarks and further reading	119
9	Value distribution theory	121
9.1	The Nevanlinna characteristic and the first fundamental theorem	121
9.2	The first fundamental theorem and a modified characteristic	125
9.3	The second fundamental theorem	128
9.4	Applications	134
9.5	Further properties of meromorphic functions	137
	Exercises	138
	Remarks and further reading	140
10	The gamma and beta functions	141
10.1	Euler's product solution	141
10.2	Euler's integral solution and the beta function	144
10.3	Legendre's duplication formula	146
10.4	The reflection formula and the product formula for sine	146
10.5	Asymptotics of the gamma function	148
	Exercises	151
	Remarks and further reading	153
11	The Riemann zeta function	155
11.1	Properties of ζ	156
11.2	The functional equation of the zeta function	157
11.3	Zeros	160
11.4	$\zeta(2m)$	161
11.5	The function $\xi(s)$	162
	Exercises	164
	Remarks and further reading	165
12	L-functions and primes	167
12.1	Factorization and Dirichlet characters	168
12.2	Characters of finite commutative groups	169
12.3	Analysis of L -functions	171
12.4	Proof of Dirichlet's Theorem	173
12.5	Functional equations	175
12.6	Other L -functions: algebraic and automorphic	180
	Exercises	182
	Remarks and further reading	183

13	The Riemann hypothesis	185
13.1	Primes and zeros of the zeta function	186
13.2	von Mangoldt's formula for ψ	188
13.3	The prime number theorem	189
13.4	Density of the zeros	192
13.5	The Riemann hypothesis and Gauss's approximation	195
13.6	Riemann's 1859 paper	197
13.7	Inverting the Mellin transform of ψ	199
	Exercises	200
	Remarks and further reading	203
14	Elliptic functions and theta functions	205
14.1	Elliptic functions: generalities	205
14.2	Theta functions	209
14.3	Construction of elliptic functions	212
14.4	Integrating elliptic functions	214
	Exercises	215
	Remarks and further reading	217
15	Jacobi elliptic functions	219
15.1	The pendulum equation	219
15.2	Properties of the map F	220
15.3	The Jacobi functions	222
15.4	Elliptic curves: Jacobi parametrization	225
	Exercises	226
	Remarks and further reading	227
16	Weierstrass elliptic functions	229
16.1	The Weierstrass \wp function	229
16.2	Integration of elliptic functions	232
16.3	Elliptic curves: Weierstrass parametrization	234
16.4	Addition on the curve	235
	Exercises	237
	Remarks and further reading	238
17	Automorphic functions and Picard's theorem	239
17.1	The elliptic modular function	239
17.2	The modular group and the fundamental domain	240
17.3	A closer look at λ ; Picard's theorem	243
17.4	Automorphic functions; the J function	247
	Exercises	250
	Addendum: Moonshine	253
	Remarks and further reading	254

18	Integral transforms	255
18.1	Approximate identities and Schwartz functions	255
18.2	The Cauchy Transform and the Hilbert transform	258
18.3	The Fourier transform	261
18.4	The Fourier transform for $L^1(\mathbb{R})$	262
18.5	The Fourier transform for $L^2(\mathbb{R})$	264
	Exercises	265
	Remarks and further reading	268
19	Theorems of Phragmén–Lindelöf and Paley–Wiener	269
19.1	Phragmén–Lindelöf theorems	269
19.2	Hardy’s uncertainty principle	271
19.3	The Paley–Wiener Theorem	273
19.4	An application	278
	Exercises	280
	Remarks and further reading	281
20	Theorems of Wiener and Lévy; the Wiener–Hopf method	283
20.1	The ring \mathcal{R}	283
20.2	Convolution equations	286
20.3	The case of real zeros of $1 - \widehat{k}$	290
	Exercises	292
	Remarks and further reading	294
21	Tauberian theorems	297
21.1	Hardy’s theorem	298
21.2	Abel, Tauber, Littlewood, and Hardy–Littlewood	299
21.3	Karamata’s tauberian theorem	301
21.4	Wiener’s tauberian theorem	304
21.5	A theorem of Malliavin and applications	309
	Exercises	312
	Remarks and further reading	314
22	Asymptotics and the method of steepest descent	315
22.1	The method of steepest descent	315
22.2	The Airy integral	317
22.3	The partition function and the Hardy–Ramanujan formula	319
22.4	Proof of the functional equation (22.3.6)	325
	Exercises	328
	Remarks and further reading	329

23	Complex interpolation and the Riesz–Thorin theorem	331
23.1	Interpolation: the complex method	331
23.2	L^p spaces	334
23.3	Application: the Riesz–Thorin theorem.	336
23.4	Application to Fourier series	337
	Exercises	338
	Remarks and further reading	339
	References	341
	Index	349
