<i>Illustration credits</i>	xi
<i>List of figures</i>	xiii
<i>List of tables</i>	xxi
<i>Preface</i>	xxv
<i>Acknowledgements</i>	xxvii
<i>Abbreviations</i>	xxviii
<i>Introduction</i>	xxx
<b>1 Energy and society</b>	<b>1</b>
1.1 <i>A brief history of energy use</i>	1
1.2 <i>Energy and human development</i>	2
1.3 <i>Environmental impacts of energy use</i>	6
1.4 <i>Security of energy supply</i>	9
1.5 <i>Energy and sustainable development</i>	11
<i>Notes</i>	13
<i>Further reading</i>	13
<i>References</i>	13
<i>Final achievement levels</i>	14
<i>Exercises</i>	14
<b>2 What is energy?</b>	<b>18</b>
2.1 <i>Energy in energy systems</i>	18
2.2 <i>Units of energy</i>	20
2.3 <i>Power</i>	22
2.4 <i>What are energy carriers?</i>	24
2.5 <i>The energy content of energy carriers</i>	24
2.6 <i>Higher and lower heating value of fuels</i>	25
2.7 <i>Energy use or energy consumption?</i>	29
2.8 <i>Final energy use</i>	29
2.9 <i>Calculating primary energy use from final energy use</i>	32

vi	Contents	
	2.10 Energy balances and energy statistics	32
	Further reading	35
	References	36
	Final achievement levels	36
	Exercises	37
<b>3</b>	<b>Energy services and energy demand</b>	<b>41</b>
	3.1 Energy functions/energy services	41
	3.2 Energy use in buildings	43
	3.3 Energy use in transport	53
	Further reading	57
	References	57
	Final achievement levels	58
	Exercises	58
<b>4</b>	<b>Energy use in industry, analysis and management of energy use</b>	<b>63</b>
	4.1 Energy use in the manufacturing industry	63
	4.2 Energy analysis of energy users	74
	4.3 Energy management	76
	Further reading	79
	References	79
	Final achievement levels	79
	Exercises	79
<b>5</b>	<b>Energy extraction and conversion</b>	<b>85</b>
	5.1 Non-renewable energy sources	85
	5.2 Reserves and resources	90
	5.3 Renewable energy sources and conversion	91
	5.4 Electricity production: conventional power plants	98
	5.5 Combined generation of heat and power	100
	5.6 Transmission and distribution of electricity and natural gas	103
	5.7 Oil refineries	105
	5.8 Carbon capture and storage	106
	Note	110
	Further reading	111
	References	111
	Final achievement levels	112
	Exercises	112
<b>6</b>	<b>Energy markets</b>	<b>117</b>
	6.1 Energy demand and price elasticities	119
	6.2 Oil markets	120

6.3	Coal markets	122	
6.4	Natural gas markets	122	
6.5	Bio-energy markets	123	
6.6	Electricity markets	123	
6.7	Carbon markets	129	
	Notes	130	
	Further reading	130	
	References	131	
	Final achievement levels	131	
	Exercises	131	
<b>7</b>	<b>Exergy analysis</b>		<b>137</b>
7.1	The second law of thermodynamics	137	
7.2	Exergy	141	
7.3	Exergy analysis	144	
7.4	Pinch analysis	148	
	Further reading	153	
	Reference	153	
	Final achievement levels	154	
	Exercises	154	
<b>8</b>	<b>Analysis of energy chains</b>		<b>160</b>
8.1	General approach to energy chain analysis	160	
8.2	Accuracy of primary energy use	162	
8.3	Related concepts and applications of energy chain analysis	164	
8.4	Average and marginal approaches in the electricity sector	167	
8.5	Allocation in multi-output processes	169	
8.6	Emission factors	174	
	Notes	176	
	Further reading	176	
	References	176	
	Final achievement levels	177	
	Exercises	177	
<b>9</b>	<b>Life-cycle energy analysis</b>		<b>180</b>
9.1	The systematic approach in environmental life-cycle assessment	180	
9.2	Process energy analysis	183	
9.3	Input-output energy analysis	186	
9.4	Hybrid method of process and input-output analysis	195	
9.5	Related concepts and applications	197	
	Notes	199	
	Further reading	199	

References	200	
Final achievement levels	200	
Exercises	201	
<b>10 Energy efficiency</b>		<b>205</b>
10.1 What is energy efficiency?	205	
10.2 Energy efficiency improvement	206	
10.3 A taxonomy of energy efficiency improvement options	207	
10.4 Technical energy efficiency	212	
10.5 The energy efficiency index	214	
10.6 Monetary energy intensity	219	
10.7 The rebound effect	221	
10.8 New business models for energy efficiency	221	
Notes	222	
Further reading	222	
References	223	
Final achievement levels	224	
Exercises	224	
<b>11 Economic analysis of energy technologies</b>		<b>230</b>
11.1 General approach to the analysis of energy technologies	230	
11.2 Technology characterisation	232	
11.3 Principles of cost-benefit analysis: the basics	232	
11.4 Cost-benefit analysis: the private perspective	236	
11.5 Cost-benefit analysis: the social perspective	237	
11.6 Scale laws and learning curves	240	
Further reading	242	
References	244	
Final achievement levels	245	
Exercises	245	
<b>12 Potentials and marginal abatement cost curves</b>		<b>249</b>
12.1 Different types of potentials	249	
12.2 What is the reference?	250	
12.3 Methods to determine potentials	252	
12.4 Techno-economic analysis	253	
12.5 Marginal abatement cost curves	256	
12.6 Problems with the potential concept and marginal abatement cost curves	257	
Further reading	260	
References	261	

	<i>Final achievement levels</i>	261
	<i>Exercises</i>	261
<b>13</b>	<b>Volume, structure and energy efficiency</b>	<b>266</b>
	13.1 <i>Volume, structure, and energy efficiency</i>	266
	13.2 <i>Decomposition of volume, structure, and energy efficiency</i>	267
	13.3 <i>Econometric analysis</i>	273
	<i>Further reading</i>	275
	<i>References</i>	275
	<i>Final achievement levels</i>	275
	<i>Exercises</i>	276
<b>14</b>	<b>Energy policies and policy evaluation</b>	<b>281</b>
	14.1 <i>Why energy policies?</i>	281
	14.2 <i>Policy instruments in the area of energy</i>	283
	14.3 <i>Energy policy evaluation</i>	288
	<i>Further reading</i>	293
	<i>Final achievement levels</i>	293
	<i>Exercises</i>	294
<b>15</b>	<b>Energy models and energy scenarios</b>	<b>298</b>
	15.1 <i>The scenario approach</i>	298
	15.2 <i>Energy system models</i>	299
	15.3 <i>Modelling energy demand</i>	301
	15.4 <i>Modelling energy conversion and supply: how models make choices</i>	302
	15.5 <i>Partial and general equilibrium modelling</i>	304
	15.6 <i>An overview of some models and scenarios</i>	305
	15.7 <i>Pitfalls of modelling and scenario construction</i>	309
	<i>Further reading</i>	310
	<i>References</i>	311
	<i>Final achievement levels</i>	311
	<i>Exercises</i>	311
<b>16</b>	<b>Climate-neutral energy systems</b>	<b>316</b>
	16.1 <i>The need for a climate-neutral energy system</i>	316
	16.2 <i>The changing energy system</i>	320
	16.3 <i>Power systems with large shares of intermittent renewables</i>	323
	16.4 <i>Outlook</i>	327
	<i>Notes</i>	327
	<i>Further reading</i>	328
	<i>References</i>	328
