

Contents

Chapter 1. Introduction	1
1.1. Topology and acausality of pleated surfaces	3
1.2. Cross ratio and shear cocycles	5
1.3. Geometry of pleated surfaces	7
1.4. Length spectra of maximal representations	8
1.5. Photon structures fibering over hyperbolic surfaces	9
1.6. The anti-de Sitter case	12
Outline	12
Chapter 2. Preliminaries	15
2.1. The pseudo-Riemannian space $\mathbb{H}^{2,n}$	15
2.2. Acausal sets and Poincaré model	17
2.3. Maximal representations	23
2.4. Hyperbolic surfaces and Teichmüller space	25
2.5. Cross ratios	29
Chapter 3. Laminations and pleated sets	33
3.1. Crossing geodesics and acausality	35
3.2. Pleated sets	36
3.3. Continuity of pleated sets	39
3.4. Bending locus	40
Chapter 4. Hyperbolic structures on pleated sets I	43
4.1. Cross ratios of maximal representations	44
4.2. Outline of the construction	48
4.3. Finite shears between plaques	49
4.4. Shear cocycles: Finite case	52
4.5. Shears and length functions: Finite case	53
Chapter 5. Hyperbolic structures on pleated sets II	57
5.1. Divergence radius functions	58
5.2. Shear cocycles: General case	60
5.3. Continuity of shear cocycles	65
5.4. Shears and length functions: General case	68
5.5. The proof of Theorem 4.1	69
Chapter 6. Geometry of pleated surfaces	71
6.1. Developing maps and metric properties	72
6.2. Finite leaved maximal laminations	75
6.3. General maximal laminations	81

Chapter 7. Teichmüller geometry and length spectra	83
7.1. Length distortion and dominated set	83
7.2. Structure of the dominated set	84
7.3. Simple length spectrum	85
Chapter 8. Fibered photon structures	89
8.1. A geometric decomposition	91
8.2. Gluing triangles of photons	94
8.3. Gluing pants of photons	102
8.4. Topology of the gluing	105
Appendix A. Other cross ratios	107
Appendix B. Shears and symmetries of cross ratios	109
Appendix C. On divergence radius functions	113
Bibliography	117
