

Contents

Chapter 1. Introduction	1
1.1. Useful notation	10
Chapter 2. Mean field game and control problem	13
2.1. Mean field game and standing assumption	13
2.2. Mean field control problem	15
2.3. Connection with the MFG system	19
2.4. Summary of the main results	21
Chapter 3. Elements of Fourier analysis	23
3.1. Probability measures with finitely many non-zero Fourier coefficients	23
3.2. From probability measures on \mathcal{O}_N to a probability measure on $\mathcal{P}(\mathbb{T}^d)$	25
3.3. Restriction of a function defined on $\mathcal{P}(\mathbb{T}^d)$	27
3.4. Projection of a function defined on $\mathcal{P}(\mathbb{T}^d)$	29
3.5. Mollification	29
3.6. Weak formulation of semi-concavity	32
Chapter 4. Generalized solutions to the HJB equation	37
4.1. Interpretation of the spatial derivatives	37
4.2. Definition of a generalized solution	38
4.3. The value function as a generalized solution	40
4.4. Proof of the auxiliary lemmas	44
4.5. Mollification of d_{-2} -Lipschitz continuous and semi-concave generalized solutions	48
4.6. Uniqueness of Lipschitz, semi-concave admissible generalized solutions	58
Chapter 5. Application to mean field games	69
5.1. Notion of weak solution	69
5.2. Uniqueness of weak solutions	74
5.3. Auxiliary lemmas	78
5.4. Classical solutions to the master equation as weak solutions	82
Appendix A. Appendix	85
A.1. Construction of a probability measure on $\mathcal{P}(\mathbb{T}^d)$ satisfying Theorem 3.5	85
A.2. Proof of Theorem 3.10 (Rademacher's theorem on $(\mathcal{P}(\mathbb{T}^d), \mathbb{P})$)	100
A.3. Mollification of McKean-Vlasov equations	109
Bibliography	111
