Chapter 1. Introduction	1
1.1. Background and overview	1
1.2. Strong confluence of geodesics	4
1.3. Geometric structure of geodesics	6
1.4. Approximation by geodesics between typical points	9
1.5. Outline	10
Chapter 2. Preliminaries	15
2.1. Brownian map review	15
2.2. Breadth-first exploration of the Brownian map	17
2.3. Brownian disk review	21
Chapter 3. Close geodesics must intersect near their endpoints	25
3.1. \mathcal{X} occurs with positive probability within a band	25
3.2. There are \mathcal{X} everywhere along a geodesic between typical points	32
3.3. Proof of Proposition 3.1	36
Chapter 4. Finite number of geodesics	47
4.1. Finite number of geodesics from a point	47
4.2. Approximate geodesic tail bounds	51
4.3. Finite number of geodesics between pairs of points	55
Chapter 5. Proof of strong confluence and topology of geodesics	71
5.1. Intersection behavior	71
5.2. Proof of Theorem 1.1	72
Chapter 6. Exponent for disjoint geodesics from a point	77
6.1. Band estimate	78
6.2. Proof of Proposition 6.1	83
Chapter 7. Completion of proofs of dimension upper bounds	95
7.1. Number of disjoint geodesics from a point	95
7.2. Number of geodesics between two points	97
Chapter 8. Points connected by 5, 7, and 8 geodesics	103
8.1. The sets $\tilde{\Phi}_2$ and $\tilde{\Phi}_3$	104
8.2. Completion of the proof	109
Bibliography	115
