

Contents

Chapter 1. Introduction	1
1.1. Derived projectivizations	2
1.2. Derived projectivizations of sheaves of perfect-amplitude in $[0, 1]$	4
1.3. Applications to classical situations	6
1.4. Applications to Hecke correspondences moduli	9
1.5. The framework of derived algebraic geometry	11
1.6. Related works	12
1.7. Notations and conventions	13
Acknowledgments	16
Chapter 2. Derived symmetric algebras	17
2.1. Classical symmetric, exterior and divided power algebras	17
2.2. Non-abelian derived functors	19
2.3. Derived symmetric, exterior, and divided powers	21
2.4. Derived symmetric algebras	22
2.5. Universal fiber sequences associated to symmetric powers	26
2.6. Filtrations associated to symmetric, exterior and divided powers	33
Chapter 3. Quasi-coherent sheaves and algebras on prestacks	35
3.1. ∞ -categories of \mathcal{C} -valued sheaves on prestacks	35
3.2. Quasi-coherent sheaves on prestacks	36
3.3. Quasi-coherent algebras on prestacks and relative spectra	39
3.4. Derived symmetric powers and universal fiber sequences on prestacks	42
3.5. Derived symmetric algebras over prestacks	45
Chapter 4. Derived projectivizations	49
4.1. Affine cones	50
4.2. Derived projectivizations	55
Chapter 5. Generalized Serre's theorem	69
5.1. Serre's theorem for projective bundles	69
5.2. Generalized Serre's theorem	71
Chapter 6. Beilinson's relations	79
6.1. Exceptional sequences and mutation functors	80
6.2. Beilinson's relations	87
Chapter 7. Semiorthogonal decompositions	91
7.1. The Fourier–Mukai functors and semiorthogonal decompositions	92
7.2. The local situation	95
7.3. Applications to classical examples	98

Chapter 8. Hecke correspondence moduli as derived projectivizations	111
8.1. Hecke correspondences: the case of one-step flags	113
8.2. Hecke correspondences: the case of general flags	117
8.3. Hecke correspondences for surfaces	121
Bibliography	127
