

Contents

Chapter 1. Introduction	1
1.1. Floer theory relative to an anticanonical divisor	1
1.2. Floer theory for Lefschetz fibrations	1
1.3. Floer theory for Lefschetz pencils	3
1.4. Content of the paper	5
Chapter 2. Basic notions: Algebra	7
2.1. A_∞ -categories	7
2.2. A_∞ -bimodules	8
2.3. Noncommutative linear systems	10
2.4. Localisation	14
Chapter 3. Basic notions: Geometry	19
3.1. Riemann surfaces	19
3.2. One-forms	20
3.3. Discs	21
3.4. Cauchy-Riemann equations	22
3.5. Limits of solutions	23
3.6. Energy	24
3.7. Moving boundary conditions	25
3.8. The complex plane as target space	26
Chapter 4. Popsicle structures	29
4.1. Popsicles	29
4.2. Moduli spaces	31
4.3. Complexification	32
4.4. Orientations	35
4.5. Weighted popsicles	37
Chapter 5. Fibrations with singularities	41
5.1. Executive summary	41
5.2. Target space geometry	43
5.3. Controlling solutions	45
5.4. Transversality	46
5.5. Consistent choices	47
5.6. Grading and signs	49
5.7. The ordered categories	51
5.8. Continuation cocycles	52
5.9. Fukaya categories by localisation	53
5.10. A noncommutative divisor	55

Chapter 6. The restriction functor	59
6.1. Geometric setup	59
6.2. Energy and transversality arguments	61
6.3. Filtering the morphism spaces	64
6.4. Geometry of the A_∞ -category \mathcal{Q}	65
Chapter 7. Ample hypersurfaces	67
7.1. Local geometric setup	67
7.2. Intersection numbers	69
7.3. Global geometric setup	71
7.4. Intersection numbers revisited	73
7.5. Definition of the algebraic structure	73
7.6. Transversality	76
7.7. Compactness by example: Convergence and bubbling	76
7.8. Compactness by example: splitting	78
7.9. The general compactness argument	79
7.10. A variant	82
Chapter 8. The noncommutative pencil	85
8.1. Flavoured popsicles	85
8.2. Definition of the algebraic structure	86
8.3. The local geometry, revisited	88
Chapter 9. An example	89
9.1. The graded Kronecker quiver	89
9.2. Bimodules	92
9.3. The Lefschetz fibration on an affine quadric	94
9.4. The Lefschetz pencil on a projective quadric	96
Bibliography	99
