Preface	ix
1 Introduction	1
1.1 Adelic line bundles	2
1.2 Intersection theory and heights	6
1.3 Volumes and equidistribution	8
1.4 Algebraic dynamics	11
1.5 Notation and terminology	15
2 Adelic Divisors and Adelic Line Bundles	17
2.1 Preliminaries on arithmetic varieties	17
2.2 Objects of mixed coefficients	22
2.3 Essentially quasi-projective schemes	26
2.4 Adelic divisors	30
2.5 Adelic line bundles	35
2.6 Examples and constructions	44
2.7 Definitions over more general bases	50
3 Interpretation by Berkovich Spaces	58
3.1 Berkovich spaces	58
3.2 Arithmetic divisors and metrized line bundles	66
3.3 Analytification of adelic divisors	68
3.4 Analytification of adelic line bundles	73
3.5 Restricted analytic spaces	78
3.6 Local theory	85
4 Intersection Theory	99
4.1 Intersection theory	99
4.2 Metrics of the Deligne pairing: Statements	103
4.3 Metrics of the Deligne pairing: Proofs	110
4.4 Positivity of the Deligne pairing	118
4.5 Deligne pairing of adelic line bundles	122
4.6 More functorialities of the pairing	125
5 Volumes and Heights	131
5.1 Effective sections of adelic line bundles	131

5.2	Volumes of adelic line bundles	137
5.3	Heights on quasi-projective varieties	151
5.4	Equidistribution: Conjectures and theorems	164
5.5	The Hodge bundle	176
6	Algebraic Dynamics	181
6.1	Invariant adelic line bundles	181
6.2	Heights of points on a subvariety	188
6.3	Equidistribution of PCF maps	192
6.4	Admissible extensions of line bundles	201
6.5	Néron-Tate height on a curve	205
A	Review on Heights and Arithmetic Intersection Theory	215
A.1	Heights and degrees	216
A.2	Arithmetic surfaces	222
A.3	Arithmetic intersection theory	232
A.4	Arithmetic positivity	237
A.5	Adelic line bundles on projective varieties	243
A.6	Measures and equidistribution	250
	Bibliography	257
	Index	269
