

CONTENTS

Preface	xiii
Acknowledgments	xv
Author	xvii
1 General Premise	1
1.1 Biological Contexts	1
1.2 Single-Molecule Experiments	4
1.3 Nomenclature	7
1.4 Entropic Barrier Idea	7
1.5 Physics of Translocation	9
1.5.1 Drift-Diffusion	9
1.5.2 Capture	9
1.5.3 Translocation	11
1.6 Outlook	12
2 Size, Shape, and Structure of Macromolecules	13
2.1 Measures of Polymer Conformations	13
2.2 Universal Behavior	21
2.3 Excluded Volume Interaction	23
2.4 Coarse-Grained Models of Chain Connectivity	24
2.4.1 Freely Jointed Chain	24
2.4.2 Kuhn Chain Model	25
2.4.3 Gaussian Chain	27
2.4.4 Wormlike Chain	32
2.5 Chain Swelling by Excluded Volume Effect	34
2.6 Coil-Globule Transition	39
2.7 Concentration Effects	40
2.8 Summary	44
3 Electrolyte Solutions, Interfaces, and Geometric Objects	45
3.1 Electrolyte Solutions	45
3.1.1 Coulomb Interaction and Bjerrum Length	46
3.1.2 Poisson-Boltzmann Equation	48
3.1.3 Debye-Hückel Theory	49

	3.1.3.1	Electrostatic Screening Length	50
	3.1.3.2	Effect of Ion Size	52
	3.1.3.3	Charge Distribution around an Ion	54
	3.1.3.4	Free Energy	56
3.2		Charged Interfaces	57
	3.2.1	Charged Spherical Particles	58
	3.2.2	Planar Interfaces	60
	3.2.2.1	Salt-Free Solutions	61
	3.2.2.2	Salty Solutions	62
	3.2.3	Cylindrical Pore	65
	3.2.4	Charged Cylinder	69
	3.2.5	Charged Line	72
	3.2.6	Dielectric Mismatch	74
3.3		Summary	77
4		Flexible and Semiflexible Polyelectrolytes	79
	4.1	Concepts	80
	4.1.1	Coulomb Strength	81
	4.1.2	Debye Length for Polyelectrolyte Solutions	81
	4.1.3	Chain Connectivity	82
	4.1.4	Counterion Worm	84
	4.1.5	Dielectric Mismatch	85
	4.1.6	Electrostatic Excluded Volume	87
	4.1.7	Electrostatic Persistence Length	88
	4.1.8	Hydrophobic Interaction	90
	4.2	Experimental Results	90
	4.3	Simulation Results	92
	4.3.1	Radius of Gyration	94
	4.3.2	Counterion Adsorption and Effective Charge	95
	4.4	Electrostatic Swelling with Fixed Polymer Charge	100
	4.4.1	High Salt Limit	100
	4.4.2	Low Salt Limit	102
	4.4.3	Electrostatic Blob	104
	4.4.4	Crossover Formula	106
	4.5	Self-Regularization of Polymer Charge	107
	4.6	Concentration Effects	111
	4.7	Summary	113
5		Confinement, Entropic Barrier, and Free Energy Landscape	115
	5.1	Hole in a Wall	116
	5.2	Spherical Cavities	121
	5.2.1	Gaussian Chain	122
	5.2.2	Uncharged Polymer with Excluded Volume	128
	5.2.3	Polyelectrolyte Chain	132
	5.3	Cylindrical Pores	134
	5.3.1	Flexible Chain	135
	5.3.2	Semiflexible Chain	138

5.4	Infinitely Wide Channels	141
5.5	Summary	142
6	Random Walks, Brownian Motion, and Drift	145
6.1	Biased Random Walk	146
6.1.1	Gaussian Chain Statistics	148
6.1.2	Drift-Diffusion	149
6.2	Brownian Motion and Langevin Equation	152
6.2.1	Brownian Particle without External Force	153
6.2.2	Brownian Particle under an External Force	156
6.2.3	General Form of Langevin Equation	156
6.3	Fokker-Planck-Smoluchowski Equation	157
6.4	Collection of Brownian Particles	159
6.5	Equilibrium versus Steady State	160
6.5.1	Equilibrium	161
6.5.2	Steady State	161
6.6	Finite Boundaries and First Passage Time	162
6.6.1	General Equations	163
6.6.2	General Solutions	165
6.7	Properties of Drift-Diffusion Process	167
6.7.1	One Absorbing Barrier	168
6.7.2	Two Absorbing Barriers	169
6.7.3	Reflecting Boundary	172
6.7.4	Radiation Boundary Condition	173
6.8	Summary	174
7	Polyelectrolyte Dynamics	177
7.1	Solvent Continuum and Hydrodynamic Interaction	178
7.2	Uncharged Polymer	181
7.2.1	General Expectations	181
7.2.2	Rouse Model	183
7.2.3	Zimm Dynamics	186
7.2.4	Semidilute Solutions and Hydrodynamic Screening	189
7.2.5	Entanglement Regime	193
7.3	Diffusion of Polyelectrolyte Chains	194
7.4	Electrophoretic Mobility	198
7.5	Coil Stretch under Flow	204
7.6	Summary	206
8	Ion Flow in Single Pores	209
8.1	A General Scenario	209
8.2	Equilibrium	212
8.3	Steady State without Diffusion	213
8.3.1	Ionic Current and Ohm's Law	214
8.3.2	Relaxation of Charge Density	215
8.4	Steady State with Drift and Diffusion	216
8.4.1	Analogy to Electrical Circuits	217
8.4.2	Solutions of PNP Equations	218

8.4.3	Constant Field Approximation	219
8.4.3.1	GHK Current Equation	220
8.4.3.2	Concentration Profile	221
8.4.3.3	Resting Potential	221
8.5	Effect of Barriers	223
8.6	Ionic Current through Protein Pores	224
8.6.1	Gramicidin A Channel	225
8.6.2	α -Hemolysin Pore	226
8.7	Fluctuations in Ionic Current	230
8.8	Electroosmotic Flow	234
8.8.1	EOF near Planar Interfaces	234
8.8.2	EOF inside Cylindrical Pores	236
8.9	Summary	238
9	Polymer Capture	241
9.1	Representative Experimental Results	241
9.2	General Considerations	244
9.3	Diffusion-Limited Capture	247
9.4	Drift-Limited Regime	250
9.5	Effect of Convective Flow	251
9.6	Polymer Capture with Electroosmotic Flow	252
9.7	Effect of Barriers on Capture Rate	256
9.7.1	Capture Rate	259
9.7.2	Probability of Successful Translocation	262
9.7.3	Phenomenological Chemical Kinetics Model	265
9.8	Summary	268
10	Translocation Kinetics: Nucleation and Threading	271
10.1	Representative Experimental Results	271
10.1.1	Translocation through α -Hemolysin Pore	272
10.1.2	Translocation through Solid-State Nanopores	276
10.1.3	Translocation through Channels	278
10.2	Insights from Simulations	279
10.3	Theory of Translocation Kinetics	284
10.3.1	Nucleation Time	288
10.3.2	Translocation Time	289
10.3.2.1	Two Absorbing Barriers	291
10.3.2.2	One Absorbing Barrier and One Reflecting Barrier	293
10.3.3	Effect of Pore-Polymer Interactions	295
10.3.3.1	Escape from a Spherical Cavity	296
10.3.3.2	Translocation between Two Spherical Cavities	297
10.3.3.3	Two Spherical Cavities Connected by a Pore	297
10.3.3.4	Translocation with a Membrane Potential	300
10.4	Comparison between Experimental Data and Theory	302
10.4.1	Translocation through α -Hemolysin Pore	302

	10.4.2 Translocation through Solid-State Nanopores	304
	10.4.3 Translocation through Channels	306
	10.5 Summary	311
11	Further Issues	313
	11.1 Nonequilibrium Conformations during Threading	313
	11.2 Amplification of Chemical Details	315
	11.2.1 Chemical Decoration of the Pore	316
	11.2.2 Secondary Structures of the Translocating Polymer	318
	11.3 Biological Examples	320
	11.3.1 Mitochondrial Transport	320
	11.3.2 Bacterial Conjugation	322
	11.3.3 Transport through Nuclear Pore	322
	11.3.4 Genome Packing in Bacteriophages	323
	11.4 Summary	325
	References	327
	Index	343
