Preface	xiii
<b>1 Stochastic processes</b>	<b>1</b>
1.1 Random functions	1
1.1.1 Trajectories of stochastic processes	2
1.1.2 Jumps of stochastic processes	3
1.1.3 When are stochastic processes equal?	6
1.2 Measurability of Stochastic Processes	7
1.2.1 Filtration, adapted, and progressively measurable processes	8
1.2.2 Stopping times	13
1.2.3 Stopped variables, $\sigma$ -algebras, and truncated processes	19
1.2.4 Predictable processes	23
1.3 Martingales	29
1.3.1 Doob's inequalities	30
1.3.2 The energy equality	35
1.3.3 The quadratic variation of discrete time martingales	37
1.3.4 The downcrossings inequality	42
1.3.5 Regularization of martingales	46
1.3.6 The Optional Sampling Theorem	49
1.3.7 Application: elementary properties of Lévy processes	58
1.3.8 Application: the first passage times of the Wiener processes	80
1.3.9 Some remarks on the usual assumptions	91
1.4 Localization	92
1.4.1 Stability under truncation	93
1.4.2 Local martingales	94

1.4.3	Convergence of local martingales: uniform convergence on compacts in probability	104
1.4.4	Locally bounded processes	106
<b>2</b>	<b>Stochastic Integration with Locally Square-Integrable Martingales</b>	<b>108</b>
2.1	The Itô–Stieltjes Integrals	109
2.1.1	Itô–Stieltjes integrals when the integrators have finite variation	111
2.1.2	Itô–Stieltjes integrals when the integrators are locally square-integrable martingales	117
2.1.3	Itô–Stieltjes integrals when the integrators are semimartingales	124
2.1.4	Properties of the Itô–Stieltjes integral	126
2.1.5	The integral process	126
2.1.6	Integration by parts and the existence of the quadratic variation	128
2.1.7	The Kunita–Watanabe inequality	134
2.2	The Quadratic Variation of Continuous Local Martingales	138
2.3	Integration when Integrators are Continuous Semimartingales	146
2.3.1	The space of square-integrable continuous local martingales	147
2.3.2	Integration with respect to continuous local martingales	151
2.3.3	Integration with respect to semimartingales	162
2.3.4	The Dominated Convergence Theorem for stochastic integrals	162
2.3.5	Stochastic integration and the Itô–Stieltjes integral	164
2.4	Integration when Integrators are Locally Square-Integrable Martingales	167
2.4.1	The quadratic variation of locally square-integrable martingales	167
2.4.2	Integration when the integrators are locally square-integrable martingales	171
2.4.3	Stochastic integration when the integrators are semimartingales	176

<b>3</b>	<b>The Structure of Local Martingales</b>	179
3.1	Predictable Projection	182
3.1.1	Predictable stopping times	182
3.1.2	Decomposition of thin sets	188
3.1.3	The extended conditional expectation	190
3.1.4	Definition of the predictable projection	192
3.1.5	The uniqueness of the predictable projection, the predictable section theorem	194
3.1.6	Properties of the predictable projection	201
3.1.7	Predictable projection of local martingales	204
3.1.8	Existence of the predictable projection	206
3.2	Predictable Compensators	207
3.2.1	Predictable Radon–Nikodym Theorem	207
3.2.2	Predictable Compensator of locally integrable processes	213
3.2.3	Properties of the Predictable Compensator	217
3.3	The Fundamental Theorem of Local Martingales	219
3.4	Quadratic Variation	222
<b>4</b>	<b>General Theory of Stochastic Integration</b>	225
4.1	Purely Discontinuous Local Martingales	225
4.1.1	Orthogonality of local martingales	227
4.1.2	Decomposition of local martingales	232
4.1.3	Decomposition of semimartingales	234
4.2	Purely Discontinuous Local Martingales and Compensated Jumps	235
4.2.1	Construction of purely discontinuous local martingales	240
4.2.2	Quadratic variation of purely discontinuous local martingales	244
4.3	Stochastic Integration With Respect To Local Martingales	246
4.3.1	Definition of stochastic integration	248
4.3.2	Properties of stochastic integration	250
4.4	Stochastic Integration With Respect To Semimartingales	254
4.4.1	Integration with respect to special semimartingales	257

4.4.2	Linearity of the stochastic integral	261
4.4.3	The associativity rule	262
4.4.4	Change of measure	264
4.5	The Proof of Davis' Inequality	277
4.5.1	Discrete-time Davis' inequality	279
4.5.2	Burkholder's inequality	287
<b>5</b>	<b>Some Other Theorems</b>	<b>292</b>
5.1	The Doob–Meyer Decomposition	292
5.1.1	The proof of the theorem	292
5.1.2	Dellacherie's formulas and the natural processes	299
5.1.3	The sub- super- and the quasi-martingales are semimartingales	303
5.2	Semimartingales as Good Integrators	308
5.3	Integration of Adapted Product Measurable Processes	314
5.4	Theorem of Fubini for Stochastic Integrals	319
5.5	Martingale Representation	328
<b>6</b>	<b>Itô's Formula</b>	<b>351</b>
6.1	Itô's Formula for Continuous Semimartingales	353
6.2	Some Applications of the Formula	359
6.2.1	Zeros of Wiener processes	359
6.2.2	Continuous Lévy processes	366
6.2.3	Lévy's characterization of Wiener processes	368
6.2.4	Integral representation theorems for Wiener processes	373
6.2.5	Bessel processes	375
6.3	Change of Measure for Continuous Semimartingales	377
6.3.1	Locally absolutely continuous change of measure	377
6.3.2	Semimartingales and change of measure	378
6.3.3	Change of measure for continuous semimartingales	380
6.3.4	Girsanov's formula for Wiener processes	382
6.3.5	Kazamaki–Novikov criteria	386

6.4	Itô's Formula for Non-Continuous Semimartingales	394
6.4.1	Itô's formula for processes with finite variation	398
6.4.2	The proof of Itô's formula	401
6.4.3	Exponential semimartingales	411
6.5	Itô's Formula For Convex Functions	417
6.5.1	Derivative of convex functions	418
6.5.2	Definition of local times	422
6.5.3	Meyer–Itô formula	429
6.5.4	Local times of continuous semimartingales	438
6.5.5	Local time of Wiener processes	445
6.5.6	Ray–Knight theorem	450
6.5.7	Theorem of Dvoretzky Erdős and Kakutani	457
<b>7</b>	<b>Processes with Independent Increments</b>	<b>460</b>
7.1	Lévy processes	460
7.1.1	Poisson processes	461
7.1.2	Compound Poisson processes generated by the jumps	464
7.1.3	Spectral measure of Lévy processes	472
7.1.4	Decomposition of Lévy processes	480
7.1.5	Lévy–Khintchine formula for Lévy processes	486
7.1.6	Construction of Lévy processes	489
7.1.7	Uniqueness of the representation	491
7.2	Predictable Compensators of Random Measures	496
7.2.1	Measurable random measures	497
7.2.2	Existence of predictable compensator	501
7.3	Characteristics of Semimartingales	508
7.4	Lévy–Khintchine Formula for Semimartingales with Independent Increments	513
7.4.1	Examples: probability of jumps of processes with independent increments	513
7.4.2	Predictable cumulants	518
7.4.3	Semimartingales with independent increments	523

7.4.4	Characteristics of semimartingales with independent increments	530
7.4.5	The proof of the formula	534
7.5	Decomposition of Processes with Independent Increments	538
<b>Appendix</b>		547
<b>A Results from Measure Theory</b>		547
A.1	The Monotone Class Theorem	547
A.2	Projection and the Measurable Selection Theorems	550
A.3	Cramér's Theorem	551
A.4	Interpretation of Stopped $\sigma$ -algebras	555
<b>B Wiener Processes</b>		559
B.1	Basic Properties	559
B.2	Existence of Wiener Processes	567
B.3	Quadratic Variation of Wiener Processes	571
<b>C Poisson processes</b>		579
<b>Notes and Comments</b>		594
<b>References</b>		597
<b>Index</b>		603
