CHAPTER 1	1
Inorganic Chemistry: The Periodic Table and the World We Live in	1
1.1 Why Study Inorganic Chemistry?	1
1.2 Understanding and Predicting Descriptive Inorganic Chemistry	2
1.3 The Periodic Table	3
1.4 Characteristic Valence Electron Configurations	4
1.4.1 Number of Valence Electrons of an Atom	6
1.4.2 Valence Orbitals	7
1.4.3 Valence Electron Configurations of Atoms	7
1.4.4 Valence Electron Configurations of Ions	8
1.5 Lewis Dot Structures of Molecules and Ions	8
1.6 Periodic Trends in Electronegativities of Atoms	10
1.7 Oxidation Numbers of Atoms and Charges of Ions	11
1.7.1 Numerical Rules for Calculating Oxidation Numbers	11
1.7.2 Oxidation Numbers from Lewis Structures	12
1.7.3 Periodic Trends in Common Oxidation Numbers	13
1.7.4 Oxidation Numbers in Nomenclature	14
1.8 Periodic Trends in Ionic Radii	14
1.9 Thermodynamic Measures of Tendencies to React	15
1.10 Study Objectives	18
1.11 Exercises	18
CHAPTER 2	21
Metal Cations and Oxo Anions in Aqueous Solution	21
2.1 Hydration of Cations	21
2.2 Hydrolysis of Cations: Hydroxides, Oxides, Oxo Acids, Oxo Anions	24
2.3 Predicting the Degree of Hydrolysis of Cations	27

2.3.1	Effects of Charge and Radius on Hydrolysis	27
2.3.2	Effects of Electronegativity on Hydrolysis	30
2.4	Halides That Fail to Undergo Hydrolysis	31
2.5	Some Details of the Chemistry of Hydrated Ions	32
2.5.1	Oxo Cations	32
2.5.2	Color and Metal Ions	33
2.6	The Hydrolysis of Oxo Anions	34
2.6.1	Calculating the Basicities of Oxo Anions	35
2.6.2	Quick Estimates of Basicities	38
2.7	Hydroxo Anions	38
2.8	The Formulas of Oxo Anions	39
2.9	Naming of Oxo Anions	43
2.9.1	Deriving the Name from the Formula	43
2.9.2	Deriving the Formula from the Name	44
2.10	Naming and Writing Formulas of Inorganic Salts	45
2.10.1	Naming Inorganic Salts	45
2.10.2	Writing Formulas	46
2.11	Strengths of Oxo Acids; Nomenclature	46
2.12	Most Common Forms of the Elements in Water	48
2.13	Study Objectives	54
2.14	Exercises	54

CHAPTER 3 59

Ionic Solids and Precipitation Reactions of Hydrated Ions 59

3.1	Solubility Rules for Ionic Solids	59
3.2	Thermodynamics and Generalized Solubility Rules for Salts	60
3.3	Entropy and Precipitation: The Structures of Hydrated Ions and Liquid Water	64
3.4	Electrostatic Structure-Breaking Ions and the Structure of Liquid Water	68
3.5	Enthalpy and Precipitation: The Importance of Lattice Energies	69
3.6	Ionic Solids: Coulombic Attractions and Lattice Energies	71
3.7	Radius Ratios and Lattice Types	74
3.8	Stability of Lattices and the Solubility Rules	79
3.9	Close Packing of Anions	81
3.10	Writing and Interpreting Net Ionic Equations	84
3.10.1	Writing Net Ionic Equations	84
3.10.2	Interpreting Net Ionic Equations; Using Inorganic Handbooks	84
3.11	Study Objectives	86
3.12	Exercises	86

CHAPTER 4	91
Oxides and Polynuclear Oxo Anions of the Elements: Their Physical, Chemical, and Environmental Properties	91
4.1 Periodic Trends in Acid-Base and Solubility Properties of Oxides	91
4.2 Interunit Forces and Physical Properties of Compounds	95
4.3 The Physical States and Structures of the Oxides of the Elements	96
4.4 Covalent Oxides: Nomenclature and Periodic Trends in Structure and Physical State	100
4.4.1 Nomenclature	102
4.4.2 Structures and Physical Properties	104
4.5 Practical Uses and Environmental Chemistry of Volatile Oxides and Oxo Acids	106
4.5.1 Carbon Oxides	106
4.5.2 Nitrogen Oxides and Nitric Acid	107
4.5.3 Physical Properties of Concentrated Oxo Acids	109
4.5.4 Sulfur Oxides and Sulfuric Acid	109
4.5.5 Phosphorus Pentoxide and Phosphoric Acid	111
4.5.6 Other Volatile Oxides	112
4.6 Uses of Metal Oxides; Mixed Metal and Nonstoichiometric Metal Oxides	113
4.7 Polysilicates: Basic Structural Types, Uses, and Chemistry	115
4.8 Isomorphous Substitution and Diagonal Relationships of Cations: Aluminosilicates	121
4.9 Polynuclear Oxo Anions of <i>p</i> - and <i>d</i> -Block Elements: Selected Structures and Uses	127
4.10 Acid-Base Chemistry of Ions in Water: A Summary	130
4.11 Study Objectives	131
4.12 Exercises	132
 CHAPTER 5	 137
Oxidation-Reduction Chemistry of the Elements	137
5.1 Standard Reduction Potentials; Periodic Trends in Stability of High Oxidation States of Oxo Anions and Acids	137
5.2 pH and the Stability of High Oxidation States; Syntheses of Oxo Anions and Their Use as Oxidizing Agents	141
5.3 Pourbaix (pE/pH) Diagrams and the Forms in Which the Elements Occur in Natural Waters under Different Conditions of Aeration	146
5.4 The Stability of Low Oxidation States: The Reduction of Metal Ions	153
5.5 Nonmetals and Their Monoatomic Anions	159
5.5.1 Redox Chemistry of Nonmetals and Their Anions	159

5.5.2	Nonmetal Anions as Bases	161
5.5.3	Pseudohalide Ions	162
5.6	Explosives, Flammable Compounds, and Strong Oxidizing Agents	164
5.7	Industrial Processes for Extracting Elements from Their Ores	167
5.8	Study Objectives	173
5.9	Exercises	174
CHAPTER 6		180
Properties of the Elements Themselves		180
6.1	Physical States and Heats of Atomization of the Elements	180
6.2	Physical Properties, Allotropes, and Uses of the Elements	181
6.3	Electron Configurations, Covalent Bonding, and the Physical Properties of the Elements	188
6.4	Types of Atomic Radii	190
6.5	Periodicity of Covalent Radii and Bond Energies	194
6.6	The Metals; Conductors and Semiconductors	198
6.7	Catenation of the Elements	202
6.8	Thermochemical Analysis of Redox Reactions: The Born-Haber Cycle	207
6.9	Thermochemical Analysis of the Activity Series of the Elements	215
6.10	Periodicity and Significance of Ionization Energies and Electron Affinities	217
6.11	Significance of Atomization Energies in Redox Chemistry	219
6.12	Study Objectives	221
6.13	Exercises	222
CHAPTER 7		226
Coordination Compounds and the Lewis Acid-Base Concept		226
7.1	Coordination Compounds and the Lewis Acid-Base Concept: Terms Used	226
7.2	Coordination Compounds in Biochemistry and in Industrial Catalysis	232
7.3	The Shapes of <i>p</i> -Block Molecules, Ions, and Coordination Compounds (VSEPR)	236
	7.3.1 Compounds with No Unshared Electron Pairs on the Central Atom	237
	7.3.2 The Case of Unshared <i>p</i> -Electron Pairs on the Central Atom	239
7.4	Classification of Ligands	243
7.5	The Chelate and Macrocyclic Effects	247
7.6	Nomenclature of Coordination and Organometallic Compounds	248

7.7	Thermodynamics of the Lewis Acid-Base Interaction: Drago's <i>E</i> and <i>C</i> Parameters	251
7.8	Nonaqueous Solvents	254
	7.8.1 Aprotic Solvents	255
	7.8.2 Protic Solvents	256
7.9	Study Objectives	259
7.10	Exercises	260
CHAPTER 8		266
The Hard and Soft Acid-Base (HSAB) Principle and Its Applications		266
8.1	The Hard and Soft Acid-Base (HSAB) Principle	267
8.2	Relative and Borderline Hardness and Softness	270
8.3	The HSAB Principle, Polar Covalent Bonding, and Pauling Electronegativities	273
8.4	Effects of Changing Substituents and Oxidation Numbers on Electronegativities	277
8.5	The Need for Two Parameters: Softness and Strength	279
8.6	Applications of HSAB: Solubility of Halides and Chalcogenides	281
8.7	Applications of HSAB: The Qualitative Analysis Scheme for Metal Ions	283
8.8	Applications of HSAB: Redox Chemistry	286
8.9	Applications of HSAB: The Geochemical Classification and Differentiation of the Elements	287
8.10	Applications of HSAB to Coordination Chemistry: Toxicology of the Elements and Medicinal Chemistry	292
	8.10.1 Elements That Are Essential and/or Toxic	292
	8.10.2 Removal of Unwanted Metal Ions: Chelation Therapy	298
8.11	Study Objectives	300
8.12	Exercises	301
CHAPTER 9		306
The Halides, Nitrides, and Sulfides of the Elements		306
9.1	Existence or Nonexistence of Given Halides	306
9.2	Color of Halides: Charge-Transfer Bands and Internal Redox Reactions	307
9.3	Methods of Synthesis of Halides	311
9.4	Physical States of Halides and Their Ionic, Covalent, or Polymeric Covalent Structures	313
9.5	Structural Features of Selected Halides	317
9.6	Reactions and Uses of Halides	321

9.7	Solvolysis with Oxygen Solvents: Inorganic Esters, Alkoxides, Silicones	326
9.8	Nitrogen Compounds of the Elements	329
9.9	Sulfides of the Elements	333
9.10	Study Objectives	336
9.11	Exercises	336
CHAPTER 10		340
<hr/>		
	The Hydrides and Organometallic Derivatives of the Elements	340
10.1	Hydrides: Their Formulas, Stabilities, and Classification	340
10.2	Structures of the Hydrides	343
10.3	Hydride Cations and Anions	346
10.4	Syntheses of the Hydrides and Hydride Anions of the Elements	348
10.5	Reactions and Uses of the Hydrides	350
10.6	Carbides of the Elements	352
10.7	Methyl and Phenyl Compounds of the Elements: Structures and Stability	353
10.8	Lewis Acid-Base Properties of the Methyls and Phenyls	356
10.9	Methods of Synthesis of Methyls and Phenyls	357
10.10	Organometallic Compounds of the <i>d</i> -Block Metals: Simple Carbonyls and the 18-Electron Rule	359
10.11	Syntheses and Properties of Metal Carbonyls	362
10.12	Metal Complexes of Pi-Donor Ligands	363
10.13	Study Objectives	366
10.14	Exercises	367
CHAPTER 11		371
<hr/>		
	The Underlying Reasons for Periodic Trends	371
11.1	Review of Overall Periodic Trends and Anomalies	371
11.2	Angular Part of the Electronic Wave Function	372
11.3	Radial Part of the Wave Function: Shielding	378
11.4	Slater's Rules	385
11.5	Radii of Atoms and Trends in Covalent-Bonding Ability	388
11.6	Explanation of Electronegativity Trends: Allred-Rochow Electronegativities	391
11.7	Relativistic Effects on Orbitals	393
11.8	Predicting the Chemistry of Superheavy Elements	396
11.9	Study Objectives	397
11.10	Exercises	398

CHAPTER 12	402
Summary: Applying Theory to Chemical Reality	402
12.1 Abundance and Nuclear Stabilities of the Elements	402
12.2 Final Review	408
12.3 Study Objectives	411
12.4 Exercises	412
CHAPTER 13	415
Laboratory Experiments in the Principles of Descriptive Inorganic Chemistry	415
13.1 Experiment 1: Some Reactions of Cations	415
13.2 Experiment 2: Some Reactions of Oxo Anions	418
13.3 Experiment 3: Reaction of Anions with Cations	419
13.4 Experiment 4: Periodicity in the Activity (Electromotive) Series of the Elements	420
13.5 Experiment 5: Nonaqueous Reactions of Metal Ions and Compounds	423
13.6 Experiment 6: Competitive Precipitation and Complexation Reactions	425
APPENDIX A	428
Answers to Selected Exercises	428
A.1 Chapter 1	428
A.2 Chapter 2	429
A.3 Chapter 3	429
A.4 Chapter 4	430
A.5 Chapter 5	430
A.6 Chapter 6	431
A.7 Chapter 7	432
A.8 Chapter 8	433
A.9 Chapter 9	433
A.10 Chapter 10	434
A.11 Chapter 11	434
APPENDIX B	435
Glossary	435

APPENDIX C	441
Frequently Used Tables	441
Table 2.1 Hydration Enthalpies of Metal Cations	441
Table 2.5 Shannon-Prewitt Radii and Hydration Enthalpies of Some Anions	442
Table 3.4 Lattice Types and Madelung Constants for Different Stoichiometries and Radius Ratios of Cations and Anions	443
Figure 5.2 Pourbaix Diagrams for <i>s</i> - and <i>p</i> -Block Elements	444
Figure 5.3 Pourbaix Diagrams for <i>d</i> -Block Elements	445
Table 6.1 Heats of Atomization of the Elements	446
Table 6.4 Covalent and Single-Bonded Metallic Radii of the Elements	447
Table 6.5 Element-Element Covalent Bond Energies	448
Table 6.6 First Ionization Energies of the Elements	449
Table 6.7 Second Ionization Energies of (+1 Ions of) the Elements	450
Table 6.9 Electron Affinities of the Elements	451
Table 11.3 Allred-Rochow Electronegativities of the Elements	452
