

Contents

Chapter 1. Introduction	1
Chapter 2. Brandt matrices and definite Shimura curves	7
1. Basic setting	7
2. Definite quaternion algebra over function fields	9
3. Brandt matrices	10
4. Definite Shimura curves	12
4.1. Hecke correspondences	13
4.2. Gross height pairing	15
Chapter 3. The basis problem for Drinfeld type automorphic forms	17
1. Weil representation	17
1.1. Weil representation of $SL_2 \times O(V)$	17
1.2. Test functions from arithmetic data	19
2. Theta series	21
3. Drinfeld type automorphic forms and Hecke operators	22
3.1. Fourier coefficients of theta series	24
4. The Hecke module homomorphism Φ	26
4.1. Changing levels	27
5. Construction of Drinfeld type newforms	29
6. The basis problem	31
Chapter 4. Metaplectic forms and Shintani-type correspondence	33
1. Metaplectic forms	33
1.1. Metaplectic group	33
1.2. Weil representation and theta series from pure quaternions	35
1.3. Fourier coefficients of metaplectic theta series	41
2. Hecke operators and Shintani-type correspondence	43
3. Pure quaternions and Brandt matrices	46
Chapter 5. Trace formula of Brandt matrices	51
1. Optimal embeddings	51
1.1. Local optimal embeddings	53
2. Trace formula	57
Bibliography	61
Symbols	63
