Avant-Propos	vii
Preface to the Three Volumes	ix
Introduction to this Volume	xvii
1 Asymptotic Expansions in the Complex Domain	1
1.1 Poincaré asymptotics	2
1.1.1 Definition	2
1.1.2 Examples	3
1.1.3 Algebras of Asymptotic Functions	11
1.2 Gevrey Asymptotics	13
1.2.1 Gevrey Series	14
1.2.2 Algebras of Gevrey Asymptotic Functions	16
1.2.3 Flat s -Gevrey Asymptotic Functions	20
1.3 The Borel-Ritt Theorem	21
1.4 The Cauchy-Heine Theorem	26
2 Sheaves and Čech Cohomology	33
2.1 Presheaves and sheaves	33
2.1.1 Presheaves	33
2.1.2 Sheaves	37
2.1.3 From Presheaves to Sheaves: Espaces Étalés	37
2.1.4 Morphisms of Sheaves	39
2.1.5 Sheaves $\mathcal{A}$ of Asymptotic and $\mathcal{A}_s$ of s -Gevrey Asymptotic Functions over S^1	41
2.1.6 Quotient Sheaves and Exact Sequences	43
2.1.7 The Borel-Ritt Theorem Revisited	46
2.1.8 Change of Base Space: Direct Image, Restriction and Extension by 0	46
2.2 Abelian Čech Cohomology	49

2.2.1	Cohomology of a Covering	49
2.2.2	Cohomology of a Space	51
2.2.3	The Borel-Ritt Theorem and Cohomology	52
2.2.4	The Space S^1 and the Cauchy-Heine Theorem	53
2.3	Non-abelian Čech Cohomology	57
2.3.1	Non-abelian Cohomology in Degree 0	57
2.3.2	Non-abelian Cohomology in Degree 1	58
2.3.3	Exact Sequences	60
3	Linear Ordinary Differential Equations	63
3.1	Equation versus System	64
3.2	The Viewpoint of $\mathcal{D}$ -Modules	65
3.2.1	$\mathcal{D}$ -Modules and First Order Differential Systems	65
3.2.2	$\mathcal{D}$ -Modules and Order n Differential Operators	69
3.3	Formal Meromorphic Classification	71
3.3.1	The System Case	71
3.3.2	Some Definitions Related to Normal Forms	75
3.3.3	The Equation Case	79
3.4	The Main Asymptotic Existence Theorem	86
3.5	Meromorphic Classification	90
3.5.1	The Infinitesimal Isomorphism	93
3.5.2	Malgrange-Sibuya Theorems	95
3.5.3	The Stokes Cocycle Theorem	98
3.5.4	Sibuya's Proof of the Malgrange-Sibuya Isomorphism Theorem	107
3.6	Infinitesimal neighborhoods	114
3.6.1	Infinitesimal Neighborhoods Associated with the Exponential Order	114
3.6.2	Infinitesimal Neighborhoods Associated with the Exponential Order and Type	117
3.6.3	More Infinitesimal Neighborhoods	120
4	Irregularity and Gevrey Index Theorems	121
4.1	Introduction	121
4.2	The Deligne-Malgrange Approach	123
4.3	Wild Analytic Continuation and Index Theorems	131
5	Four Equivalent Approaches to k-Summability	133
5.1	The First Approach: Ramis k -Summability	134
5.2	The Second Approach: Ramis-Sibuya k -Summability	139
5.2.1	Definition	140
5.2.2	Applications to Differential Equations	141
5.3	The Third Approach: Borel-Laplace Summation	144
5.3.1	Definitions	145
5.3.2	Nevanlinna's Theorem and Summability	154

5.3.3	Tauberian Theorems	166
5.3.4	The Borel-Laplace Summability and the Summable- Resurgence	175
5.4	The Fourth Approach: Wild Analytic Continuation	180
5.4.1	k -Wild-Summability	180
5.4.2	Applications	181
6	Tangent-to-Identity Diffeomorphisms	185
6.1	Introduction	185
6.2	The Birkhoff-Kimura Sectorial Normalization theorem	188
6.3	The Invariance Equation of g	193
6.4	1-Summability of the Conjugation Series $\tilde{h}$	194
7	Six Equivalent Approaches to Multisummability	197
7.1	Introduction and the Ramis-Sibuya Series	197
7.2	The First Approach: Asymptotic Definition	200
7.2.1	The Relative Watson's Lemma	200
7.2.2	An Asymptotic Definition of Multisummability	204
7.3	The Second Approach: Malgrange-Ramis Definition	208
7.3.1	Definition	209
7.3.2	Application to Differential Equations	210
7.4	The Third Approach: Iterated Laplace Integrals	211
7.5	The Fourth Approach: Balser's Decomposition into Sums	219
7.5.1	The Case $k_1 > 1/2$	219
7.5.2	The Case $k_1 \leq 1/2$	221
7.6	The Fifth Approach: Écalle's Acceleration	223
7.7	The Sixth Approach: Wild Analytic Continuation	231
7.7.1	$\underline{k}$ -Wild-Summability	231
7.7.2	Application to Tauberian Theorems	233
	Exercises	237
	Solutions to Exercises	245
	References	265
	Glossary of Notations	269
	Index	271
