Preface	vii
Acknowledgements	xiii
Session 1. What is Probability?	1
1.1 Children's Perception of Probability	3
1.2 Casting Lots in the Present and in the Past . . .	17
1.3 Personal Interpretations of Probability	19
1.3.1 How would you choose between two equal-probability alternatives?	19
1.4 Perception of Rare Events	22
1.5 My Father's Perception of "Probability"	24
1.6 Conclusion	25
Session 2. How Do We Calculate Probabilities?	27
2.1 The Classical "Definition" of Probability	27
2.2 The Relative Frequency "Definition"	44
2.3 Conclusion	50

Session 3. The Axiomatic Approach to Probability	59
3.1 The Probability Space: (Ω, L, P)	59
3.2 The Sample Space: Ω	60
3.3 The Set of All Possible Events: L	64
3.4 The Probability Function: P	75
3.5 Summary of What we have Learned in this session	85
 Session 4. Independence and Dependence Between Events	 87
4.1 Correlation between Events	96
4.2 Conditional Probability	104
4.3 The Bertrand Paradox	107
4.3.1 The problem	108
4.3.1.1 First solution	109
4.3.1.2 Second solution	109
4.3.1.3 Third solution	110
4.4 The General Definition of Conditional Probability	111
4.5 Correlation between Events and Conditional Probability	116
4.6 Dependence and the Extent of Overlapping between Two or More Events	124
4.7 Conditional Probability and Subjective Probability	128
4.8 Conditional Probability and Cause and Effect .	130
4.8.1 Can more incriminating evidence be inculpatory?	134
4.8.2 Distinction between disjoint and independent events	138

4.9	Pairwise and Triplewise Independence between Events	139
4.9.1	Pairwise independence does not imply triplewise independence . . .	139
4.9.2	Triplewise independence does not imply pairwise independence . . .	140
4.9.3	Confusing conditional probability and joint probability	141
4.9.3.1	A challenging problem . . .	144
4.9.3.2	Treasure hunt	146
4.10	Conclusion	151
Session 5. Bayes' Theorem and Its Applications		153
5.1	Newsworthy News Crazy	154
5.1.1	50% off or a rip-off?	154
5.1.2	A banana business proposition . . .	164
5.2	False-Positive Results	167
5.3	The Three Cards Problem: Use and Misuse of Bayes' Theorem	176
5.3.1	(I) First solution	178
5.3.2	(II) Second solution	179
5.4	The Monty Hall Problem	183
5.5	The Three Prisoners' Problem: A Misuse of Probabilities That Can Cost You Your Life . . .	185
5.5.1	The problem	186
5.5.2	The solution to the three prisoners' problem	188
5.5.2.1	First solution	188
5.5.2.2	Second solution	191

5.5.2.3	A more general but easier to solve problem	192
5.5.2.4	An apparent paradox	194
5.6	Re-appraisal of Probabilities	199
5.7	An Abuse of Probability and Bayes' Theorem	203
5.8	The Solution to the Urn Problem	205
5.9	Conclusion	207
Session 6. Average, Variance and Random Variables		209
6.1	To Buckle or Not to Buckle	209
6.2	Can an Average Grade be Higher Than the Highest Grade?	210
6.3	How Can One Increase the Average IQ of the Professors in Two Universities?	210
6.4	Average Speed and the Average of Two Speeds	211
6.5	Standard Deviation	217
6.6	Random Variables	221
6.7	Summary of What We Have Learned in This Session	224
Session 7. Probability Distributions		225
7.1	The Uniform Distribution	228
7.2	The Bernoulli Distribution and the Binomial Distribution	231
7.3	The Exponential Distribution	240
7.4	The Normal Distribution	245
7.5	Conclusion	248
Session 8. Shannon's Measure of Information		249
8.1	Definition of the SMI	250

8.2	Properties of the SMI	252
8.3	SMI as a Measure of Uncertainty	254
8.4	SMI as a Measure of the Amount of Information	257
8.5	The SMI of a Uniform Distribution	260
8.6	The SMI of a Non-Uniform Distribution	265
8.7	How Did Shannon Derive the SMI?	268
8.8	SMI, Entropy and the Second Law of Thermodynamics	272
	Notes	279
	References and Suggested Reading	315
	Index	317
