Prerequisites and Notation . . . . .	XI
--------------------------------------	----

## Part One

### Arithmetic Theory of Fields

Chapter I. Valuated Fields . . . . .	1
11. Valuations . . . . .	1
12. Archimedean valuations . . . . .	14
13. Non-archimedean valuations . . . . .	20
14. Prolongation of a complete valuation to a finite extension . . . . .	28
15. Prolongation of any valuation to a finite separable extension . . . . .	30
16. Discrete valuations . . . . .	37
Chapter II. Dedekind Theory of Ideals . . . . .	41
21. Dedekind axioms for $S$ . . . . .	42
22. Ideal theory . . . . .	44
23. Extension fields . . . . .	52
Chapter III. Fields of Number Theory . . . . .	54
31. Rational global fields . . . . .	54
32. Local fields . . . . .	59
33. Global fields . . . . .	65

## Part Two

### Abstract Theory of Quadratic Forms

Chapter IV. Quadratic Forms and the Orthogonal Group . . . . .	82
41. Forms, matrices and spaces . . . . .	82
42. Quadratic spaces . . . . .	88
43. Special subgroups of $O_n(V)$ . . . . .	100
Chapter V. The Algebras of Quadratic Forms . . . . .	112
51. Tensor products . . . . .	113
52. Wedderburn's theorem on central simple algebras . . . . .	118
53. Extending the field of scalars . . . . .	129
54. The Clifford algebra . . . . .	131
55. The spinor norm . . . . .	137
56. Special subgroups of $O_n(V)$ . . . . .	141
57. Quaternion algebras . . . . .	142
58. The Hasse algebra . . . . .	149

## Part Three

**Arithmetic Theory of Quadratic Forms over Fields**

Chapter VI. The Equivalence of Quadratic Forms . . . . .	154
61. Complete archimedean fields . . . . .	154
62. Finite fields . . . . .	157
63. Local fields . . . . .	158
64. Global notation . . . . .	172
65. Squares and norms in global fields . . . . .	173
66. Quadratic forms over global fields . . . . .	186
Chapter VII. Hilbert's Reciprocity Law . . . . .	190
71. Proof of the reciprocity law . . . . .	190
72. Existence of forms with prescribed local behavior . . . . .	203
73. The quadratic reciprocity law . . . . .	205

## Part Four

**Arithmetic Theory of Quadratic Forms over Rings**

Chapter VIII. Quadratic Forms over Dedekind Domains . . . . .	208
81. Abstract lattices . . . . .	208
82. Lattices in quadratic spaces . . . . .	220
Chapter IX. Integral Theory of Quadratic Forms over Local Fields . . . . .	239
91. Generalities . . . . .	239
92. Classification of lattices over non-dyadic fields . . . . .	246
93. Classification of lattices over dyadic fields . . . . .	250
94. Effective determination of the invariants . . . . .	279
95. Special subgroups of $O_n(V)$ . . . . .	280
Chapter X. Integral Theory of Quadratic Forms over Global Fields . . . . .	284
101. Elementary properties of the orthogonal group over arithmetic fields . . . . .	285
102. The genus and the spinor genus . . . . .	297
103. Finiteness of class number . . . . .	305
104. The class and the spinor genus in the indefinite case . . . . .	311
105. The indecomposable splitting of a definite lattice . . . . .	321
106. Definite unimodular lattices over the rational integers . . . . .	323
<b>Bibliography</b> . . . . .	336
<b>Index</b> . . . . .	337
