## PART I: CREATING ENTERPRISE APPLICATIONS

### CHAPTER 1: INTRODUCING JAVA PLATFORM, ENTERPRISE EDITION 3

---

A Timeline of Java Platforms	3
In the Beginning	4
The Birth of Enterprise Java	5
Java SE and Java EE Evolving Together	6
Understanding the Most Recent Platform Features	9
A Continuing Evolution	13
Understanding the Basic Web Application Structure	13
Servlets, Filters, Listeners, and JSPs	13
Directory Structure and WAR Files	14
The Deployment Descriptor	15
Class Loader Architecture	16
Enterprise Archives	17
Summary	18

### CHAPTER 2: USING WEB CONTAINERS 19

---

Choosing a Web Container	19
Apache Tomcat	20
GlassFish	21
JBoss and WildFly	22
Other Containers and Application Servers	22
Why You'll Use Tomcat in This Book	23
Installing Tomcat on Your Machine	23
Installing as a Windows Service	24
Installing as a Command-Line Application	24
Configuring a Custom JSP Compiler	26
Deploying and Undeploying Applications in Tomcat	27
Performing a Manual Deploy and Undeploy	28
Using the Tomcat Manager	28

---

Debugging Tomcat from Your IDE	30
Using IntelliJ IDEA	30
Using Eclipse	35
Summary	39
<b>CHAPTER 3: WRITING YOUR FIRST SERVLET</b>	<b>41</b>
<hr/>	
Creating a Servlet Class	42
What to Extend	42
Using the Initializer and Destroyer	45
Configuring a Servlet for Deployment	46
Adding the Servlet to the Descriptor	46
Mapping the Servlet to a URL	47
Running and Debugging Your Servlet	49
Understanding doGet(), doPost(), and Other Methods	51
What Should Happen during the service Method Execution?	51
Using HttpServletRequest	52
Using HttpServletResponse	55
Using Parameters and Accepting Form Submissions	56
Configuring your Application Using Init Parameters	61
Using Context Init Parameters	61
Using Servlet Init Parameters	62
Uploading Files from a Form	64
Introducing the Customer Support Project	65
Configuring the Servlet for File Uploads	65
Accepting a File Upload	68
Making Your Application Safe for Multithreading	69
Understanding Requests, Threads, and Method Execution	69
Protecting Shared Resources	70
Summary	71
<b>CHAPTER 4: USING JSPS TO DISPLAY CONTENT</b>	<b>73</b>
<hr/>	
  Is Easier Than output.println(" ")	74
Why JSPs Are Better	75
What Happens to a JSP at Run Time	76
Creating Your First JSP	78
Understanding the File Structure	78
Directives, Declarations, Scriptlets, and Expressions	79
Commenting Your Code	81
Adding Imports to Your JSP	82

---

Using Directives	83
Using the <jsp> Tag	86
<b>Using Java within a JSP (and Why You Shouldn't!)</b>	<b>88</b>
Using the Implicit Variables in a JSP	88
Why You Shouldn't Use Java in a JSP	93
<b>Combining Servlets and JSPs</b>	<b>94</b>
Configuring JSP Properties in the Deployment Descriptor	94
Forwarding a Request from a Servlet to a JSP	97
<b>A Note about JSP Documents (JSPX)</b>	<b>102</b>
<b>Summary</b>	<b>104</b>
<b>CHAPTER 5: MAINTAINING STATE USING SESSIONS</b>	<b>105</b>
<hr/>	
<b>Understanding Why Sessions Are Necessary</b>	<b>106</b>
Maintaining State	106
Remembering Users	107
Enabling Application Workflow	107
<b>Using Session Cookies and URL Rewriting</b>	<b>107</b>
Understanding the Session Cookie	108
Session IDs in the URL	110
Session Vulnerabilities	112
<b>Storing Data in a Session</b>	<b>116</b>
Configuring Sessions in the Deployment Descriptor	116
Storing and Retrieving Data	119
Removing Data	123
Storing More Complex Data in Sessions	125
<b>Applying Sessions Usefully</b>	<b>129</b>
Adding Login to the Customer Support Application	129
Detecting Changes to Sessions Using Listeners	133
Maintaining a List of Active Sessions	135
<b>Clustering an Application That Uses Sessions</b>	<b>139</b>
Using Session IDs in a Cluster	139
Understand Session Replication and Failover	141
<b>Summary</b>	<b>142</b>
<b>CHAPTER 6: USING THE EXPRESSION LANGUAGE IN JSPS</b>	<b>143</b>
<hr/>	
<b>Understanding Expression Language</b>	<b>144</b>
What It's For	144
Understanding the Base Syntax	145
Placing EL Expressions	146
<b>Writing with the EL Syntax</b>	<b>147</b>

Reserved Keywords	148
Operator Precedence	148
Object Properties and Methods	154
EL Functions	155
Static Field and Method Access	156
Enums	157
Lambda Expressions	157
Collections	158
Using Scoped Variables in EL Expressions	160
Using the Implicit EL Scope	161
Using the Implicit EL Variables	165
Accessing Collections with the Stream API	167
Understanding Intermediate Operations	168
Using Terminal Operations	170
Putting the Stream API to Use	171
Replacing Java Code with Expression Language	172
Summary	175
<b>CHAPTER 7: USING THE JAVA STANDARD TAG LIBRARY</b>	<b>177</b>
Introducing JSP Tags and the JSTL	178
Working with Tags	178
Using the Core Tag Library (C Namespace)	182
<c:out>	182
<c:url>	183
<c:if>	184
<c:choose>, <c:when>, and <c:otherwise>	185
<c:forEach>	186
<c:forEachTokens>	187
<c:redirect>	188
<c:import>	188
<c:set> and <c:remove>	189
Putting Core Library Tags to Use	190
Using the Internationalization and Formatting Tag Library (FMT Namespace)	193
Internationalization and Localization Components	193
<fmt:message>	194
<fmt:setLocale>	196
<fmt:bundle> and <fmt:setBundle>	196
<fmt:requestEncoding>	197
<fmt:timeZone> and <fmt:setTimeZone>	197
<fmt:formatDate> and <fmt:parseDate>	198
<fmt:formatNumber> and <fmt:parseNumber>	199

---

Putting i18n and Formatting Library Tags to Use	200
Using the Database Access Tag Library (SQL Namespace)	203
Using the XML Processing Tag Library (X Namespace)	205
Replacing Java Code with JSP Tags	205
Summary	208
<b>CHAPTER 8: WRITING CUSTOM TAG AND FUNCTION LIBRARIES</b>	<b>209</b>
<hr/>	
Understanding TLDs, Tag Files, and Tag Handlers	210
Reading the Java Standard Tag Library TLD	211
Comparing JSP Directives and Tag File Directives	217
Creating Your First Tag File to Serve as an HTML Template	219
Creating a More Useful Date Formatting Tag Handler	221
Creating an EL Function to Abbreviate Strings	226
Replacing Java Code with Custom JSP Tags	227
Summary	232
<b>CHAPTER 9: IMPROVING YOUR APPLICATION USING FILTERS</b>	<b>233</b>
<hr/>	
Understanding the Purpose of Filters	234
Logging Filters	234
Authentication Filters	234
Compression and Encryption Filters	234
Error Handling Filters	235
Creating, Declaring, and Mapping Filters	235
Understanding the Filter Chain	235
Mapping to URL Patterns and Servlet Names	236
Mapping to Different Request Dispatcher Types	236
Using the Deployment Descriptor	237
Using Annotations	238
Using Programmatic Configuration	238
Ordering Your Filters Properly	239
URL Pattern Mapping versus Servlet Name Mapping	239
Exploring Filter Order with a Simple Example	241
Using Filters with Asynchronous Request Handling	243
Investigating Practical Uses for Filters	247
Adding a Simple Logging Filter	248
Compressing Response Content Using a Filter	249
Simplifying Authentication with a Filter	254
Summary	255

---

<b>CHAPTER 10: MAKING YOUR APPLICATION INTERACTIVE WITH WEBSOCKETS</b>	<b>257</b>
<b>Evolution: From Ajax to WebSockets</b>	<b>258</b>
Problem: Getting New Data from the Server to the Browser	259
Solution 1: Frequent Polling	259
Solution 2: Long Polling	260
Solution 3: Chunked Encoding	262
Solution 4: Applets and Adobe Flash	263
WebSockets: The Solution Nobody Knew Kind of Already Existed	264
<b>Understanding the WebSocket APIs</b>	<b>268</b>
HTML5 (JavaScript) Client API	268
Java WebSocket APIs	270
<b>Creating Multiplayer Games with WebSockets</b>	<b>273</b>
Implementing the Basic Tic-Tac-Toe Algorithm	274
Creating the Server Endpoint	274
Writing the JavaScript Game Console	278
Playing WebSocket Tic-Tac-Toe	283
<b>Using WebSockets to Communicate in a Cluster</b>	<b>284</b>
Simulating a Simple Cluster Using Two Servlet Instances	284
Transmitting and Receiving Binary Messages	286
Testing the Simulated Cluster Application	287
<b>Adding "Chat with Support" to the Customer Support Application</b>	<b>288</b>
Using Encoders and Decoders to Translate Messages	289
Creating the Chat Server Endpoint	291
Writing the JavaScript Chat Application	294
Summary	296
<b>CHAPTER 11: USING LOGGING TO MONITOR YOUR APPLICATION</b>	<b>297</b>
<b>Understanding the Concepts of Logging</b>	<b>298</b>
Why You Should Log	298
What Content You Might Want to See in Logs	299
How Logs Are Written	301
<b>Using Logging Levels and Categories</b>	<b>303</b>
Why Are There Different Logging Levels?	303
Logging Levels Defined	303
How Logging Categories Work	304
How Log Sifting Works	305
<b>Choosing a Logging Framework</b>	<b>305</b>
API versus Implementation	305

Performance	306
A Quick Look at Apache Commons Logging and SLF4J	307
Introducing Log4j 2	307
<b>Integrating Logging into Your Application</b>	<b>312</b>
Creating the Log4j 2 Configuration Files	313
Utilizing Fish Tagging with a Web Filter	316
Writing Logging Statements in Java Code	317
Using the Log Tag Library in JSPs	319
Logging in the Customer Support Application	319
Summary	320

## **PART II: ADDING SPRING FRAMEWORK INTO THE MIX**

### **CHAPTER 12: INTRODUCING SPRING FRAMEWORK** **323**

<b>What Is Spring Framework?</b>	<b>324</b>
Inversion of Control and Dependency Injection	325
Aspect-Oriented Programming	325
Data Access and Transaction Management	325
Application Messaging	326
Model-View-Controller Pattern for Web Applications	326
<b>Why Spring Framework?</b>	<b>326</b>
Logical Code Groupings	326
Multiple User Interfaces Utilizing One Code Base	327
<b>Understanding Application Contexts</b>	<b>327</b>
<b>Bootstrapping Spring Framework</b>	<b>329</b>
Using the Deployment Descriptor to Bootstrap Spring	330
Programmatically Bootstrapping Spring in an Initializer	332
<b>Configuring Spring Framework</b>	<b>336</b>
Creating an XML Configuration	338
Creating a Hybrid Configuration	340
Configuring Spring with Java Using @Configuration	345
<b>Utilizing Bean Definition Profiles</b>	<b>349</b>
Understanding How Profiles Work	350
Considering Antipatterns and Security Concerns	352
Summary	353

### **CHAPTER 13: REPLACING YOUR SERVLETS WITH CONTROLLERS** **355**

<b>Understanding @RequestMapping</b>	<b>356</b>
Using @RequestMapping Attributes to Narrow Request Matching	356
Specifying Controller Method Parameters	360
Selecting Valid Return Types for Controller Methods	368

---

Using Spring Framework's Model and View Pattern	370
Using Explicit Views and View Names	371
Using Implicit Views with Model Attributes	373
Returning Response Entities	375
Making Your Life Easier with Form Objects	380
Adding the Form Object to Your Model	381
Using the Spring Framework <form> Tags	381
Obtaining Submitted Form Data	383
Updating the Customer Support Application	384
Enabling Multipart Support	384
Converting Servlets to Spring MVC Controllers	385
Creating a Custom Downloading View	386
Summary	387
<b>CHAPTER 14: USING SERVICES AND REPOSITORIES TO SUPPORT YOUR CONTROLLERS</b>	<b>389</b>
<hr/>	
Understanding Model-View-Controller Plus Controller-Service-Repository	390
Recognizing Different Types of Program Logic	391
Repositories Provide Persistence Logic	392
Services Provide Business Logic	392
Controllers Provide User Interface Logic	393
Using the Root Application Context Instead of a Web Application Context	394
Reusing the Root Application Context for Multiple User Interfaces	394
Moving Your Business Logic from Controllers to Services	396
Using Repositories for Data Storage	399
Improving Services with Asynchronous and Scheduled Execution	404
Understanding Executors and Schedulers	404
Configuring a Scheduler and Asynchronous Support	405
Creating and Using @Async Methods	407
Creating and Using @Scheduled Methods	408
Applying Logic Layer Separation to WebSockets	409
Adding Container-Managed Objects to the Spring Application Context	409
Using the Spring WebSocket Configurator	411
Remember: A WebSocket Is Just Another Interface for Business Logic	412
Summary	416

---

<b>CHAPTER 15: INTERNATIONALIZING YOUR APPLICATION WITH SPRING FRAMEWORK I18N</b>	<b>417</b>
<b>Why Do You Need Spring Framework i18n?</b>	<b>418</b>
Making Internationalization Easier	418
Localizing Error Messages Directly	418
<b>Using the Basic Internationalization and Localization APIs</b>	<b>419</b>
Understanding Resource Bundles and Message Formats	419
Message Sources to the Rescue	421
Using Message Sources to Internationalize JSPs	422
<b>Configuring Internationalization in Spring Framework</b>	<b>424</b>
Creating a Message Source	424
Understanding Locale Resolvers	425
Using a Handler Interceptor to Change Locales	427
Providing a User Profile Locale Setting	428
Including Time Zone Support	429
Understanding How Themes Can Improve Internationalization	429
<b>Internationalizing Your Code</b>	<b>430</b>
Using the <spring:message> Tag	431
Handling Application Errors Cleanly	433
Updating the Customer Support Application	436
Using the Message Source Directly	437
Summary	440
<b>CHAPTER 16: USING JSR 349, SPRING FRAMEWORK, AND HIBERNATE VALIDATOR FOR BEAN VALIDATION</b>	<b>441</b>
<b>What Is Bean Validation?</b>	<b>442</b>
Why Hibernate Validator?	444
Understanding the Annotation Metadata Model	444
Using Bean Validation with Spring Framework	445
<b>Configuring Validation in the Spring Framework Container</b>	<b>445</b>
Configuring the Spring Validator Bean	446
Setting Up Error Code Localization	448
Using a Method Validation Bean Post-Processor	449
Making Spring MVC Use the Same Validation Beans	450
<b>Adding Constraint Validation Annotations to Your Beans</b>	<b>450</b>

---

Understanding the Built-in Constraint Annotations	451
Understanding Common Constraint Attributes	452
Putting Constraints to Use	452
Using @Valid for Recursive Validation	454
Using Validation Groups	455
Checking Constraint Legality at Compile-Time	457
<b>Configuring Spring Beans for Method Validation</b>	<b>458</b>
Annotating Interfaces, Not Implementations	458
Using Constraints and Recursive Validation on Method Parameters	459
Validating Method Return Values	459
Indicating That a Class Is Eligible for Method Validation	460
Using Parameter Validation in Spring MVC Controllers	462
Displaying Validation Errors to the User	463
<b>Writing Your Own Validation Constraints</b>	<b>466</b>
Inheriting Other Constraints in a Custom Constraint	466
Creating a Constraint Validator	467
Understanding the Constraint Validator Life Cycle	469
<b>Integrating Validation in the Customer   Support Application</b>	<b>470</b>
Summary	472
<b>CHAPTER 17: CREATING RESTFUL AND SOAP WEB SERVICES</b>	<b>473</b>
<hr/>	
Understanding Web Services	474
In the Beginning There Was SOAP	475
RESTful Web Services Provide a Simpler Approach	476
<b>Configuring RESTful Web Services   with Spring MVC</b>	<b>484</b>
Segregating Controllers with Stereotype Annotations	484
Creating Separate Web and REST Application Contexts	485
Handling Error Conditions in RESTful Web Services	488
Mapping RESTful Requests to Controller Methods	491
Improving Discovery with an Index Endpoint	495
<b>Testing Your Web Service Endpoints</b>	<b>496</b>
Choosing a Testing Tool	497
Making Requests to Your Web Service	497
<b>Using Spring Web Services for SOAP</b>	<b>500</b>
Writing Your Contract-First XSD and WSDL	501
Adding the SOAP Dispatcher Servlet Configuration	503
Creating a SOAP Endpoint	504
Summary	508

<b>CHAPTER 18: USING MESSAGING AND CLUSTERING FOR FLEXIBILITY AND RELIABILITY</b>	<b>509</b>
Recognizing When You Need Messaging and Clustering	510
What Is Application Messaging?	510
What Is Clustering?	513
How Do Messaging and Clustering Work Together?	517
Adding Messaging Support to your Application	520
Creating Application Events	520
Subscribing to Application Events	522
Publishing Application Events	523
Making your Messaging Distributable Across a Cluster	525
Updating Your Events to Support Distribution	526
Creating and Configuring a Custom Event Multicaster	527
Using WebSockets to Send and Receive Events	529
Discovering Nodes with Multicast Packets	531
Simulating a Cluster with Multiple Deployments	533
Distributing Events with AMQP	534
Configuring an AMQP Broker	536
Creating an AMQP Multicaster	537
Running the AMQP-Enabled Application	539
Summary	540

### **PART III: PERSISTING DATA WITH JPA AND HIBERNATE ORM**

<b>CHAPTER 19: INTRODUCING JAVA PERSISTENCE API AND HIBERNATE ORM</b>	<b>543</b>
What Is Data Persistence?	543
Flat-File Entity Storage	544
Structured File Storage	544
Relational Database Systems	545
Object-Oriented Databases	546
Schema-less Database Systems	546
What Is an Object-Relational Mapper?	547
Understanding the Problem of Persisting Entities	547
O/RMs Make Entity Persistence Easier	549
JPA Provides a Standard O/RM API	550
Why Hibernate ORM?	552
A Brief Look at Hibernate ORM	552
Using Hibernate Mapping Files	552

---

Understanding the Session API	554
Getting a Session from the SessionFactory	556
Creating a SessionFactory with Spring Framework	557
<b>Preparing a Relational Database</b>	<b>559</b>
Installing MySQL and MySQL Workbench	559
Installing the MySQL JDBC Driver	562
Creating a Connection Resource in Tomcat	563
<b>A Note About Maven Dependencies</b>	<b>564</b>
<b>Summary</b>	<b>564</b>
<b>CHAPTER 20: MAPPING ENTITIES TO TABLES WITH JPA ANNOTATIONS</b>	<b>565</b>
<hr/>	
Getting Started with Simple Entities	566
Marking an Entity and Mapping It to a Table	567
Indicating How JPA Uses Entity Fields	569
Mapping Surrogate Keys	570
Using Basic Data Types	576
Specifying Column Names and Other Details	579
<b>Creating and Using a Persistence Unit</b>	<b>581</b>
Designing the Database Tables	581
Understanding Persistence Unit Scope	583
Creating the Persistence Configuration	584
Using the Persistence API	586
<b>Mapping Complex Data Types</b>	<b>590</b>
Using Enums as Entity Properties	590
Understanding How JPA Handles Dates and Times	592
Mapping Large Properties to CLOBs and BLOBs	594
<b>Summary</b>	<b>596</b>
<b>CHAPTER 21: USING JPA IN SPRING FRAMEWORK REPOSITORIES</b>	<b>597</b>
<hr/>	
Using Spring Repositories and Transactions	598
Understanding Transaction Scope	598
Using Threads for Transactions and Entity Managers	599
Taking Advantage of Exception Translation	601
<b>Configuring Persistence in Spring Framework</b>	<b>602</b>
Looking Up a Data Source	602
Creating a Persistence Unit in Code	603
Setting Up Transaction Management	607
<b>Creating and Using JPA Repositories</b>	<b>610</b>
Injecting the Persistence Unit	610
Implementing Standard CRUD Operations	611

---

Creating a Base Repository for All Your Entities	613
Demarking Transaction Boundaries in Your Services	618
Using the Transactional Service Methods	622
<b>Converting Data with DTOs and Entities</b>	<b>624</b>
Creating Entities for the Customer Support Application	624
Securing User Passwords with BCrypt	628
Transferring Data to Entities in Your Services	630
<b>Summary</b>	<b>632</b>
<b>CHAPTER 22: ELIMINATING BOILERPLATE REPOSITORIES     WITH SPRING DATA JPA</b>	<b>633</b>
<hr/>	
Understanding Spring Data's Unified Data Access	634
Avoiding Duplication of Code	634
Using the Stock Repository Interfaces	638
Creating Query Methods for Finding Entities	639
Providing Custom Method Implementations	642
<b>Configuring and Creating Spring     Data JPA Repositories</b>	<b>646</b>
Enabling Repository Auto-Generation	646
Writing and Using Spring Data JPA Interfaces	654
<b>Refactoring the Customer Support Application</b>	<b>656</b>
Converting the Existing Repositories	656
Adding Comments to Support Tickets	657
<b>Summary</b>	<b>661</b>
<b>CHAPTER 23: SEARCHING FOR DATA WITH JPA     AND HIBERNATE SEARCH</b>	<b>663</b>
<hr/>	
An Introduction to Searching	664
Understanding the Importance of Indexes	664
Taking Three Different Approaches	666
<b>Using Advanced Criteria to Locate Objects</b>	<b>666</b>
Creating Complex Criteria Queries	667
Using OR in Your Queries	674
Creating Useful Indexes to Improve Performance	676
<b>Taking Advantage of Full-Text Indexes with JPA</b>	<b>676</b>
Creating Full-Text Indexes in MySQL Tables	677
Creating and Using a Searchable Repository	678
Making Full-Text Searching Portable	684
<b>Indexing Any Data with Apache Lucene     and Hibernate Search</b>	<b>684</b>

Understanding Lucene Full-Text Indexing	685
Annotating Entities with Indexing Metadata	686
Using Hibernate Search with JPA	688
Summary	692
<b>CHAPTER 24: CREATING ADVANCED MAPPINGS AND CUSTOM DATA TYPES</b>	<b>693</b>
What's Left?	694
Converting Nonstandard Data Types	695
Understanding Attribute Converters	695
Understanding the Conversion Annotations	696
Creating and Using Attribute Converters	698
Embedding POJOs Within Entities	699
Indicating That a Type Is Embeddable	699
Marking a Property as Embedded	700
Overriding Embeddable Column Names	702
Defining Relationships Between Entities	703
Understanding One-to-One Relationships	703
Using One-to-Many and Many-to-One Relationships	705
Creating Many-to-Many Relationships	708
Addressing Other Common Situations	709
Versioning Entities with Revisions and Timestamps	709
Defining Abstract Entities with Common Properties	710
Mapping Basic and Embedded Collections	712
Persisting a Map of Key-Value Pairs	715
Storing an Entity in Multiple Tables	716
Creating Programmatic Triggers	717
Acting before and after CRUD Operations	717
Using Entity Listeners	719
Refining the Customer Support Application	720
Mapping a Collection of Attachments	721
Lazy Loading Simple Properties with Load Time Weaving	723
Summary	725
<b>PART IV: SECURING YOUR APPLICATION WITH SPRING SECURITY</b>	
<b>CHAPTER 25: INTRODUCING SPRING SECURITY</b>	<b>729</b>
What Is Authentication?	729
Integrating Authentication	730
Understanding Authorization	740
Why Spring Security?	743

---

Understanding the Spring Security Foundation	744
Using Spring Security's Authorization Services	745
Configuring Spring Security	745
Summary	746
<b>CHAPTER 26: AUTHENTICATING USERS WITH SPRING SECURITY</b>	<b>747</b>
<hr/>	
Choosing and Configuring an Authentication Provider	748
Configuring a User Details Provider	748
Working with LDAP and Active Directory Providers	759
Authenticating with OpenID	762
Remembering Users	765
Exploring Other Authentication Providers	766
Writing Your Own Authentication Provider	766
Bootstrapping in the Correct Order	767
Creating and Configuring a Provider	769
Mitigating Cross-Site Request Forgery Attacks	775
Summary	778
<b>CHAPTER 27: USING AUTHORIZATION TAGS AND ANNOTATIONS</b>	<b>779</b>
<hr/>	
Authorizing by Declaration	780
Checking Permissions in Method Code	780
Employing URL Security	783
Using Annotations to Declare Permissions	786
Defining Method Pointcut Rules	794
Understanding Authorization Decisions	794
Using Access Decision Voters	795
Using Access Decision Managers	796
Creating Access Control Lists for Object Security	798
Understanding Spring Security ACLs	798
Configuring Access Control Lists	800
Populating ACLs for Your Entities	803
Adding Authorization to Customer Support	804
Switching to Custom User Details	804
Securing Your Service Methods	808
Using Spring Security's Tag Library	813
Summary	814
<b>CHAPTER 28: SECURING RESTFUL WEB SERVICES WITH OAUTH</b>	<b>815</b>
<hr/>	
Understanding Web Service Security	816
Comparing Web GUI and Web Service Security	816

Choosing an Authentication Mechanism	817
<b>Introducing OAuth</b>	<b>818</b>
Understanding the Key Players	819
The Beginning: OAuth 1.0	819
The Standard: OAuth 1.0a	820
The Evolution: OAuth 2.0	826
<b>Using Spring Security OAuth</b>	<b>833</b>
Creating an OAuth 2.0 Provider	833
Creating an OAuth 2.0 Client	838
<b>Finishing the Customer Support Application</b>	<b>840</b>
Generating Request Nonces and Signatures	840
Implementing Client Services	842
Implementing Nonce Services	845
Implementing Token Services	847
Customizing the Resource Server Filter	850
Reconfiguring Spring Security	852
<b>Creating an OAuth Client Application</b>	<b>856</b>
Customizing the REST Template	857
Configuring the Spring Security OAuth Client	858
Using the REST Template	861
Testing the Provider and Client Together	861
Summary	862
 <b>INDEX</b>	 <b>865</b>
