

Contents

6. Banach Spaces	1
6.1. Basic Concepts and Definitions	2
6.2. Bounded Linear Functionals and the Hahn–Banach Theorem	14
6.3. The Open Mapping Theorem, the Closed Graph Theorem, and the Principle of Uniform Boundedness	33
6.4. Reflexive Banach Spaces and the Weak Topology	48
6.5. Compact Operators and Spectral Notions	70
6.6. Topological Vector Spaces	93
6.7. The Kakutani Fixed Point Theorem and the Haar Measure on a Compact Group	111
7. Hilbert Spaces	121
7.1. The Geometry of Hilbert Space	122
7.2. Subspaces, Bases, and Characterizations of Hilbert Spaces	131
7.3. The Dual Space and Adjoint Operators	142
7.4. The Algebra of Operators. The Spectral Theorem and the Approximation Theorem for Compact Operators	152
7.5. Spectral Decomposition of Self-Adjoint Operators	177
8. Spectral Theory	195
8.1. Spectral Theory for Bounded Operators Revisited	195
8.2. Unbounded Operators and Spectral Theorems for Unbounded Self-Adjoint Operators	219
Appendix	255
C. Invariant and Hyperinvariant Subspaces	255
