

Contents

	Preface	v
1.	Hahn–Banach's extension theorem	1
2.	Banach spaces and Hilbert spaces	13
3.	Operators and some consequences of Hahn–Banach's extension theorem	47
4.	The uniform boundedness theorem and Banach's open mapping theorem	75
5.	A structure theorem for compact sets in a Banach space	91
6.	Topological injections and topological surjections	98
7.	Vector topologies	110
8.	Separation theorems and Krein–Milman's theorem	132
9.	Projective topologies and inductive topologies	149
10.	Normed spaces associated with a locally convex space	162
11.	Bounded sets and compact sets in metrizable topological vector spaces	170
12.	The bornological space associated with a locally convex space	175
13.	Vector bornologies	180
14.	Initial bornologies and final bornologies	190
15.	von Neumann bornologies and locally convex topologies determined by convex bornologies	198
16.	Dual pairs and the weak topology	205
17.	Elementary duality theory	216
18.	Semi-reflexive spaces and ultra-semi-reflexive spaces	238
19.	Some recent results on compact operators and weakly compact operators	246
20.	Precompact seminorms and Schwartz spaces	265
21.	Elementary Riesz–Schauder's theory	282
22.	An introduction to operator ideals	297

23.	An aspect of fixed point theory	331
24.	An introduction to ordered convex spaces	353
	Special symbols	387
	References	395
	Index	411
