

CONTENTS

<i>Preface</i>	<i>page vii</i>
I Definitions and elementary properties	
1. Vector spaces	1
2. Topological spaces	5
3. Topological vector spaces	9
4. Seminorms	12
Supplement	17
II Duality and the Hahn–Banach theorem	
1. Linear mappings	23
2. Linear forms and the Hahn–Banach theorem	24
3. Duality and the weak topology	31
4. Polar sets	34
5. Finite-dimensional subspaces	36
6. The transpose of a linear mapping	38
Supplement	40
III Topologies on dual spaces and the Mackey–Arens theorem	
1. Bounded sets	44
2. Polar topologies	46
3. Precompact sets	48
4. Compact sets	52
5. Filters	55
6. Completeness	58
7. The Mackey–Arens theorem	61
Supplement	63
IV Barrelled spaces and the Banach–Steinhaus theorem	
1. Barrelled spaces	65
2. Topologies on spaces of linear mappings	68
3. The bidual and reflexivity	70
Supplement	73
V Inductive and projective limits	
1. Quotient spaces	76
2. Inductive limits	78

3. Mackey spaces	81
4. Projective limits	84
5. Product spaces	87
6. Direct sums	89
7. Topological supplements	95
Supplement	97
 VI Completeness and the closed graph theorem	
1. The completion of a convex space	101
2. Closed graph and open mapping theorems	110
3. Fréchet spaces	118
Supplement	122
 VII Some further topics	
1. Strict inductive limits	127
2. Bilinear mappings and tensor products	130
3. The Krein–Milman theorem	138
Supplement	140
 VIII Compact linear mappings	
1. The Riesz theory	142
2. Duality theory	151
 <i>Appendix</i>	
1. Spaces with webs	155
2. The closed graph theorem	157
3. The scope of the theorems	160
Supplement	165
 <i>Bibliography</i>	168
 <i>Index</i>	171
