

Contents

<i>Instructor's preface</i>	xi
<i>Student preface</i>	xiii
<i>Preface to the second edition</i>	xv
<i>Acknowledgments</i>	xvii
1 Introduction and overview	1
<i>Suggested reading</i>	8
2 Telescopes for inner space: Fiber optics and endoscopes	11
2.1 <i>Introduction</i>	11
2.2 <i>Optics: The science of light</i>	15
2.2.1 <i>How to see around corners</i>	15
2.2.2 <i>Reflecting and bending light</i>	18
2.2.3 <i>Why does light bend? The index of refraction</i>	19
2.2.4 <i>Optional: How lenses form images</i>	23
2.2.5 <i>Making pipes for light</i>	26
2.3 <i>Fiber optics applications in medicine:</i>	
<i>Endoscopes and laparoscopes</i>	33
2.3.1 <i>Different types of endoscopes and</i> <i>their typical construction</i>	33
2.3.2 <i>Some advantages and disadvantages</i>	42
2.3.3 <i>Laparoscopic gallbladder removals</i>	43
2.4 <i>New and future directions</i>	44
2.4.1 <i>Robotic surgery and virtual</i> <i>reality in the operating room</i>	44
2.4.2 <i>Telemedicine and military applications</i>	46
2.4.3 <i>Innovations on the horizon</i>	48
<i>Resources</i>	49
<i>Questions</i>	50
<i>Problems</i>	50
<i>Reflection and refraction</i>	50
<i>Total internal reflection and fiber optics</i>	50
<i>Advanced problems</i>	53

3 Lasers in medicine: Healing with light	55
3.1 Introduction	55
3.2 What is a laser?	56
3.3 More on the science of light: Beyond the rainbow	59
3.4 How lasers work	63
3.5 How light interacts with body tissues	70
3.6 Laser beams and spatial coherence	72
3.7 Cooking with light: Photocoagulation	77
3.8 Trade-offs in photocoagulation: Power density and heat flow	78
3.9 Cutting with light: Photovaporization	80
3.10 More power: Pulsed lasers	81
3.11 Lasers and color	84
3.12 The atomic origins of absorption	87
3.13 How selective absorption is used in laser surgery	91
3.14 Lasers in dermatology	95
3.15 Laser surgery on the eye	97
3.16 New directions: Lasers in dentistry	101
3.17 Advantages and drawbacks of lasers for medicine	102
3.18 New directions: Photodynamic therapy—Killing tumors with light	103
3.19 New directions: Diffusive optical imaging	106
Suggested reading	108
Questions	109
Problems	110
4 Seeing with sound: Diagnostic ultrasound imaging	115
4.1 Introduction	115
4.2 Sound waves	118
4.3 What is ultrasound?	121
4.4 Ultrasound and energy	124
4.5 How echoes are formed	125
4.6 How to produce ultrasound	129
4.7 Images from echoes	132
4.8 Ultrasound scanner design	139
4.9 Ultrasound is absorbed by the body	143
4.10 Limitations of ultrasound: Image quality and artifacts	151
4.11 How safe is ultrasound imaging?	157
4.12 Obstetrical ultrasound imaging	161
4.13 Echocardiography: Ultrasound images of the heart	165
4.14 Origins of the Doppler effect	166
4.15 Using the Doppler effect to measure blood flow	171
4.16 Color flow images	173

4.17	<i>Three-dimensional ultrasound</i>	174
4.18	<i>Portable ultrasound—Appropriate technology for the developing world</i>	176
	<i>Suggested reading</i>	178
	<i>Questions</i>	180
	<i>Problems</i>	181
	<i>Basic physics of sound waves</i>	181
	<i>Echo ranging and echo intensity</i>	181
	<i>Absorption of ultrasound</i>	183
	<i>Sources of distortion</i>	183
	<i>Doppler ultrasound</i>	184
	<i>Another useful source of problems on ultrasound imaging</i>	185
5	X-ray vision: Diagnostic X-rays and CT scans	187
5.1	<i>Introduction</i>	187
5.2	<i>Diagnostic x-rays: The body's x-ray shadow</i>	190
5.3	<i>Types of x-ray interactions with matter</i>	191
5.4	<i>Basic issues in x-ray image formation</i>	198
5.5	<i>Contrast media make soft tissues visible on an x-ray</i>	206
5.6	<i>How x-rays are generated</i>	210
5.7	<i>X-ray detectors</i>	217
5.8	<i>Mammography: X-ray screening for breast cancer</i>	225
5.9	<i>Digital radiography</i>	231
5.10	<i>Computed tomography (CT)</i>	238
5.11	<i>Application: Spotting brittle bones—Bone mineral scans for osteoporosis</i>	249
	<i>Suggested reading</i>	252
	<i>Questions</i>	253
	<i>Problems</i>	255
	<i>Interaction of x-rays with matter</i>	255
	<i>Contrast, contrast media, and x-ray absorption</i>	255
	<i>X-ray sources and detectors</i>	256
6	Images from radioactivity: Radionuclide scans, SPECT, and PET	259
6.1	<i>Introduction: Radioactivity and medicine</i>	259
6.2	<i>Nuclear physics basics</i>	261
6.3	<i>Radioactivity fades with time: The concept of half-lives</i>	264
6.4	<i>Gamma camera imaging</i>	270
6.5	<i>Emission tomography with radionuclides: SPECT and PET</i>	278
6.6	<i>Application: Emission computer tomography studies of the brain</i>	290
6.7	<i>Hybrid scanners</i>	293

Suggested reading 295

Questions 296

Problems 297

Useful sources of problems 298

7 Radiation therapy and radiation safety in medicine 299

7.1 *Introduction* 299

7.2 *Measuring radioactivity and radiation* 300

7.3 *Origins of the biological effects of ionizing radiation* 308

7.4 *The two regimes of radiation damage: Radiation sickness and cancer risk* 315

7.5 *Radiation therapy: Killing tumors with radiation* 329

7.8 *New directions in radiation therapy* 340

Suggested reading 343

Questions 344

Problems 344

Useful sources of more advanced problems 345

8 Magnetic resonance imaging 347

8.1 *Introduction* 347

8.2 *The science of magnetism* 350

8.3 *Nuclear magnetism* 356

8.4 *Contrast mechanisms for MRI* 367

8.5 *Listening to spin echoes* 374

8.6 *How MRI maps the body* 380

8.7 *How safe is MRI?* 386

8.8 *Creating better contrast* 390

8.9 *Sports medicine and MRI* 393

8.10 *Magnetic resonance breast imaging* 394

8.11 *Mapping body chemistry with MR spectroscopy* 396

8.12 *Brain mapping and functional MRI* 397

Suggested reading 401

Questions 401

Problems 402
