

CONTENTS

CHAPTER I. DIRICHLET PROBLEM

1. Subharmonic- and superharmonic-functions	1
2. Upper- and lower-functions	3
3. Dirichlet problem.....	4
4. Regular- and irregular-points	6
5. Dirichlet principle	9
6. Green's function	14
7. Selberg's theorem on Green's function	22
8. Neumann's problem	27
9. Mixed boundary value problem	31

CHAPTER II. SUBHARMONIC FUNCTIONS

1. Carathéodory's outer measure	33
2. Selection theorem	34
3. Semi-continuous function	35
4. Subharmonic function	37
5. Approximation theorem.....	43
6. Logarithmic potential.....	45
7. Some lemmas.....	46
8. F. Riesz' decomposition theorem	48

CHAPTER III. POTENTIAL THEORY

1. Maximum principle for logarithmic potential	53
2. Capacity. Conductor potential	54
3. Fundamental theorem	60
4. Hausdorff's measure	63
5. Transfinite diameter. Tchebycheff's constant	71
6. Evans' theorem	75
7. Maximum principle for harmonic function	77
8. Kellogg's theorem	80
9. Mapping radius.....	84

10. Balayage	86
11. Elliptic capacity	89
12. Hyperbolic capacity	94
13. Modulus of a ring domain	96
14. Capacity potential	100
15. Criteria of regularity	104
16. General Cantor set	106
17. Harmonic measure	111
18. Dirichlet problem with unbounded boundary values	118
19. Wiman's theorem	120
20. Capacity of a set in the space of regular functions	123

CHAPTER IV. POISSON INTEGRAL

1. Poisson integral	129
2. Fatou's theorem	135
3. Remark on Fatou's theorem	137
4. Poisson integral of two variables	139
5. Positive harmonic function in a unit circle	143
6. Positive harmonic function in a half-plane	149
7. Carathéodory-Toeplitz's theorem	153
8. I. Schur's theorem	159
9. Conjugate function	161
10. Littlewood's theorem on subharmonic functions in $ z < 1$	169
11. Hardy-Littlewood's maximal theorem	180
12. Non-negative subharmonic function in a half-plane	188

CHAPTER V. NEVANLINNA'S THEORY OF MEROMORPHIC FUNCTIONS

1. First fundamental theorem	195
2. On $m(r, a)$	199
3. Function of bounded type	202
4. Order of a meromorphic function	203
5. Second fundamental theorem	205
6. On $m\left(\frac{w'}{w}, r, \infty\right)$	213
7. Theorems of Picard type	214

8. Canonical product for a meromorphic function for $ z < \infty$	216
9. Order of the derivative of a meromorphic function for $ z < \infty$	220
10. Canonical product for a meromorphic function in $ z < 1$	221
11. Order of the derivative of a meromorphic function in $ z < 1$	227
12. Direct transcendental singularity	232
13. Meromorphic function in a neighbourhood of a closed set of capacity zero ..	237

CHAPTER VI. AHLFORS' THEORY OF COVERING SURFACES

1. Constants $d_0, h_0, d_0(\beta), h_0(\beta)$	243
2. Ahlfors' covering theorem	243
3. Ahlfors' fundamental theorem	246
4. Simply connected finite covering surfaces of a sphere.....	252
5. Regular exhaustion in Ahlfors' sense	256
6. Bloch's theorem and related theorems.....	259
7. A criterion on normal family.....	262
8. Uniformization of algebraic functions.....	264
9. Schottky's theorem and related theorems	266

CHAPTER VII. BOREL'S DIRECTION

1. Borel's theorem	271
--------------------------	-----

PART I. Meromorphic functions for $|z| < \infty$

1. Analogue of the second fundamental theorem for an angular domain	272
2. Borel's direction	273
3. A lemma.....	277
4. Biernacki-Rauch's theorem	282
5. Meromorphic function in an angular domain	284

PART II. Meromorphic functions in $|z| < 1$

1. Analogue of the second fundamental theorem for an angular domain	288
2. A lemma.....	291
3. Analogue of Biernacki-Rauch's theorem.....	293
4. Function of the class $\overline{\lim}_{r \rightarrow 1} T(f, r) / \log \frac{1}{1-r} = \infty$	297
5. Function of the class $\lim_{r \rightarrow 1} T(f, r) = \infty$	299

CHAPTER VIII. CLUSTER SET OF A MEROMORPHIC FUNCTION

1. Principle of majoration by harmonic measure.....	301
2. Converse of Abel's theorem.....	308
3. Function of H^p -class	314
4. F. and M. Riesz' theorem on conformal mapping	318
5. Lusin-Privaloff's theorem	320
6. Extension of Löwner's theorem.....	322
7. Function of U -class	323
8. Implicit function $y(x)$, defined by an integral relation $G(x, y)=0$	329
9. Cluster set of a meromorphic function at a non-isolated boundary point ..	331
10. Cluster set of a meromorphic function in $ z <1$	337
11. Fejér and F. Riesz's theorem and its extension by M. Riesz	339
12. Functions of class (D) and (D^*)	343

CHAPTER IX. CONFORMAL MAPPING

PART I. Simply connected domains

1. Theorems of Carathéodory and Lindelöf	352
2. Theorems of Fejér and Lindelöf	356
3. Kellogg's theorem	359
4. Angular derivative.....	365
5. Fundamental lemma	368
6. Proof of Theorem IX. 9	374
7. Remark on Theorem IX. 9	377
8. Variable domains.....	381
9. Löwner's differential equation	387
10. Rengel's inequality	393

PART II. Multiply connected domains

1. Conformal mapping on a parallel slits-plane.....	396
2. Conformal mapping on a circular, or a radial slits-plane	403
3. Conformal mapping on a circular, or a radial slits-disc	408
4. Conformal mapping on a circular, or a radial slits-ring	413
5. Conformal mapping on an n -sheeted circular disc	417

6. Conformal mapping of an open Riemann surface of planar character on a schlicht domain.....	421
7. Conformal mapping on a circular domain	424
8. Moduli of plane regions.....	426

CHAPTER X. RIEMANN SURFACE

1. Classification of open Riemann surfaces.....	429
2. Harmonic measure of the ideal boundary of an open Riemann surface....	430
3. Open Riemann surfaces of class O_G and P_G	433
4. Theorems of Bader-Parreau and Virtanen.....	442
5. Open Riemann surfaces of class O_{AD}	445
6. Open Riemann surfaces of class O_{MD^*} and P_{MD^*}	447
7. Modified Green's function.....	449
8. Potential function with two logarithmic singularities	456
9. Abelian integral of the first kind.....	460
10. Potential function with a polar singularity	464
11. Reciprocal relations.....	467
12. Riemann-Roch's theorem	471
13. Royden's theorem	476
14. Schottkyan covering surfaces of a closed Riemann surface.....	478
15. Abelian covering surfaces of a closed Riemann surface	481
16. Conformal mappings of a Riemann surface on itself.....	496
17. Moduli of closed Riemann surfaces of genus $p \geq 1$	501
18. Prolongation of a Riemann surface.....	504

CHAPTER XI. FUCHSIAN GROUP

1. Non-euclidean metric in $ z < 1$	509
2. Fundamental domain	512
3. Type of Fuchsian groups	514
4. Riemann surface F_G	519
5. Green's function of F_G	522
6. Ideal boundary of F_G	530
7. Hopf's ergodic theorem.....	535
8. Myrberg's approximation theorem.....	542
9. Analogue of Weyl's theorem on uniform distribution	544

10. Fundamental Theorem	549
11. Some consequences from the Fundamental Theorem.....	554
12. Geometry of numbers for Fuchsian groups	559
13. Lattice points in a circle.....	567

APPENDIX

Birkhoff's ergodic theorem.....	571
