FINITUDE OF  
PHYSICAL MEASURES  
FOR RANDOM MAPS

Pablo G. BARRIENTOS, Fumihiko NAKAMURA

Yushi NAKANO & Hisayoshi TOYOKAWA

SOCIÉTÉ MATHÉMATIQUE DE FRANCE

## CONTENTS

<b>1. Introduction</b> . . . . .	1
1.1. Finitude of physical measures (FPM) . . . . .	2
1.2. Markov operators . . . . .	8
1.3. Hierarchy of classes of Markov operators . . . . .	13
1.4. Examples and counterexamples . . . . .	17
1.5. Questions . . . . .	23
1.6. Organization of the paper . . . . .	27
1.7. Acknowledgement. . . . .	27
<b>2. Feller continuity and quasi-compactness: proof of Theorem B</b> . . . . .	29
2.1. Generalization of Araújo's result. . . . .	33
<b>3. Existence of invariant measures: proof of Theorem E.</b> . . . . .	37
3.1. Fundamental lemma . . . . .	37
3.2. Restrictions of Markov operators . . . . .	39
3.3. Proof of Theorem E . . . . .	40
<b>4. Mean constrictivity : proof of Theorem D</b> . . . . .	45
4.1. Proof of the lemmas. . . . .	47
4.2. Proof of the theorem . . . . .	48
4.3. On the classes (AC), (WC) and (APW) . . . . .	52
<b>5. Characterization of finitude of physical measures: proof of Theorem C</b> .	55
<b>6. Sub-hierarchy in (UC)</b> . . . . .	63
6.1. (D*) and uniform ergodicity . . . . .	66
